Reference 1600a Basic Specifications

Output Power:	400W RMS x 1 @ 4 ohms; ≤1% THD + N
(14.4 VDC)	600W RMS x 1 @ 2 ohms; ≤1% THD + N
Signal-to-noise ratio:	80dBA (reference 1W into 4 ohms)
Dynamic power:	894W channels @ 2 ohms
Effective damping factor:	6.3 @ 4 ohms
Frequency response:	11Hz – 330Hz (-3dB)
Maximum input signal:	6.0V
Maximum sensitivity:	100mV
Output regulation:	.12dB @ 4 ohms
Dimensions (L x W x D):	14-3/16" x 9" x 2-11/16" (361mm x 229mm x 69mm)
Fuse:	3 x 25A

Infinity continually strives to update and improve existing products, as well as create new ones. The specifications and details in this and related JBL publications are therefore subject to change without notice.

INFINITY REFERENCE 1600a AMPLIFIER SPECIFICATIONS

TEST VOLTAGE 14.4 +0.1V			
Specification	Rating	Unit	Remarks
Power Output 4ohm loads @50Hz (stereo mode) for each ch @<1.0%THD (Unit:W)(LPF=22K)	≥400W x 1	Watts	
Power Output 2ohm loads @50Hz (stereo mode) for each ch @<1.0%THD (Unit:W)(LPF=22K)	≥600W x 1	Watts	
THD Power 4 ohm loads and 1MD@Reference (Unit:%) LPF=22K	≤0.1% @ 50Hz	%	
THD Power 2 ohm loads and 1MD@Reference (Unit:%) LPF=22K	≤0.1% @ 50Hz	%	
Full rated power Distortion 1KHz LPF=22KHz	≤0.1%	%	
Signal/Noise Ratio a: 1 watt into 4 ohms b: full rated power (dB)	80 >105	dB	1 watt into 4 ohms 1V signal input
Input Sensitivity Low Level Input(v) @:full rated power	100mV-6V	Volts	±20%
Frequency response (Unit:-3dB)	11Hz~330Hz	Hz	-3dB
Bass Boost:(Unit:dB) @45HZ (±5Hz)	0~6dB	dB	±1dB
Idle Current (@ 2ohm)	1.2A	A	±0.15A
MAX current : rated power (All channel 2 ohm loads)	≤58A	A	
DC Offset:	≤30mV	mV	
Damping Factor (4ohm):	> 200		
Effective damping factor (4ohm):	6.364		
Dynamic Power @ 2 ohms	894W	Watts	
Output Regulation @ 4 ohms	0.12dB	dB	
Remote Operating Voltages:	5V OFF 3.5V	Volts	±1V
Turn on delay time	2 to 3	Sec	
Circuit Protection a. Temperature b. Speaker Short Circuit c. Operating Voltage Range	80 ±5 deg C Yes 8~16V		
Dimensions (L x W x H):	14-3/16" x 9" x 2-11/16" (361mm x 229mm x69mm)	Inches mm	
Fuses	25A x 3	A

	REMOTE REF AMP	Remote Level Control	1
	2100-0009-04	(RJ11) control cable	1

APPLICATIONS – 1300a AND 1600a

The Reference subwoofer amplifiers are single-channel amplifiers. There are two sets of terminals to make it easy to connect multiple woofers. Either set of (+/-) terminals may be used when connecting woofers.

To the right are four application diagrams to help plan your subwoofer system installation.

NOTE: For simplicity, Figures 3 and 4 do not show power, remote and input connections.

Subwoofers or voice coils connected in series.

Subwoofers or voice coils connected in parallel.

Figure 3. Reference 1300a or 1600a amplifier with two woofer connections.

NOTE: Minimum impedance of each subwoofer = 4 ohms if subwoofers are connected in parallel and 1 ohm if they are connected in series.

Figure 4. Reference 1300a or 1600a amplifier with one woofer connection.

NOTE: Minimum impedance of subwoofer = 2 ohms

INSTALLATION AND SETUP

Refer to the illustrations on the previous pages for control location.

Reconnect the (-) negative lead to the vehicle's battery. Apply power to the audio system and play a dynamic music track.

SETTING THE CROSSOVER(S)

Determine your system plans and set the crossover-mode switch accordingly. If your system design does not include a subwoofer, set the crossover mode to FULL and skip to "Setting Input Sensitivity."

If your system includes a subwoofer, set the crossover mode to HP (high-pass) for your full-range speakers. Adjust the crossover frequency to limit bass, and provide increased system volume with less distortion.

Mode Switch:

Full: Allows a full-range signal through to the speakers; can be used with larger full-range speakers such as 6" x 9"s.

HP: Allows a high-pass signal through to the speakers; should be used with most loudspeakers (can protect your full-range speakers from being overdriven with low frequencies, one cause of speaker damage).

LP: Allows only bass to pass through to the speakers; should be selected when powering subwoofers.

High-Pass Filters: Initially set the crossover-frequency control midway. While listening to music, adjust the crossover for the least perceived distortion from the speakers, allowing them to reproduce as much bass as possible.

Low-Pass Filters: For subwoofers, choose the highest frequency that removes vocal information from the sound of the subwoofer.

If using the 475a to drive a subwoofer(s), set the crossover mode to LP (low-pass) on the channels connected to the subwoofer.

NOTE: The 1300a, 1600a and the subwoofer output of the 5350a are low-pass only and do not have a crossover-mode switch.

SETTING INPUT SENSITIVITY

- Initially turn the INPUT LEVEL control(s) to the minimum (counterclockwise) position.
- On the source unit, increase the volume control to 3/4 volume. Slowly increase the INPUT LEVEL control(s) toward three o'clock until you hear slight distortion in the music. Then reduce the INPUT LEVEL slightly until distortion is no longer heard.

NOTE: After the source unit is on, blue LEDs (on the top panel) will light, indicating the amplifier is on. If not, check the wiring, especially the remote connection from the source unit. Also refer to "Troubleshooting."

REMOTE LEVEL CONTROL

The 1300a, 1600a and 5350a include a remote level control. This will allow the subwoofer level to be adjusted from the listening position. Connect the remote level control using the RJ11 jack on the side of the amplifier. Install the control module in the front of the vehicle within easy reach of the driver. Both the underside of the dash and the center console are suitable locations.

UNDER-DASH MOUNTING

Select a mounting location that allows easy access to the control while driving. Using the REMOTE LEVEL control as a template, mark and drill holes in the mounting surface. Attach the REMOTE LEVEL control using the mounting screws provided (Figure 11).

Figure 11. Under-dash mounting of the REMOTE LEVEL control.

Route the cable behind the dash or other interior panels and under the carpet. Do not route the cable outside the vehicle. Connect the RJ11 cable between the RJ11 receptacle on the amp and the receptacle on the REMOTE LEVEL control (Figure 12).

Figure 12. REMOTE LEVEL control electrical connection.

SETTING THE BASS BOOST

The Bass Boost control will allow you to enhance the bass output of your system at 50Hz up to 6dB.

AUX OUTPUT

Reference amplifiers (except 5350a) are equipped with full-range outputs that can be used to connect additional amplifiers.

STATUS LEDs

Power: Indicates the amplifier is on.

Protection: Refer to "Troubleshooting" for specific indications.

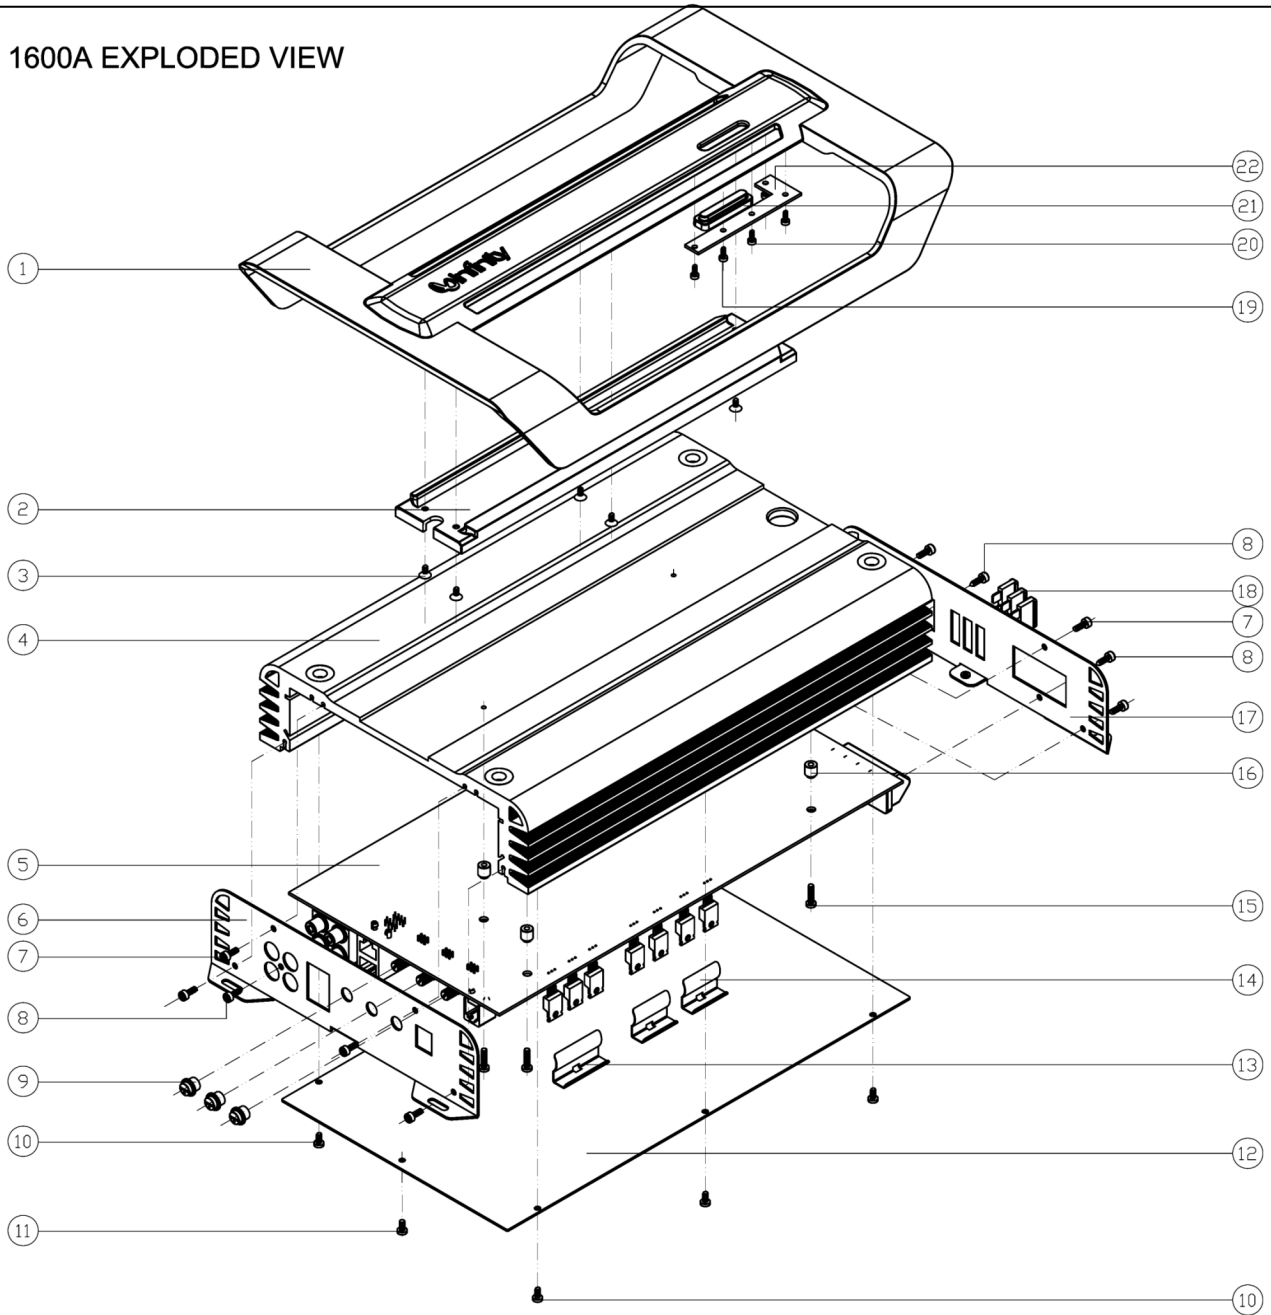

Figure 13. LED status.

TROUBLESHOOTING

- PROBLEM:** No audio (POWER LED is off).
CAUSE and SOLUTION: No voltage at BATT+ and/or REM terminals, or bad or no ground connection. Check voltages at amplifier terminals with VOM.
- PROBLEM:** No audio (PROTECT LED glows red).
CAUSE and SOLUTION: DC voltage on amplifier output. Amplifier may need service; see enclosed warranty card for service information.
- PROBLEM:** No audio (PROTECT LED glows red).
CAUSE and SOLUTION: Amplifier is overheated. Make sure amplifier cooling is not blocked at mounting location; verify that speaker-system impedance is within specified limits.
- PROBLEM:** No audio (PROTECT LED glows red).
CAUSE and SOLUTION: Voltage less than 9V on BATT+ connection. Check vehicle charging system.
- PROBLEM:** No audio (PROTECT LED glows red).
CAUSE and SOLUTION: Voltage greater than 16V or less than 8.5V on BATT+ connection. Check vehicle charging system.
- PROBLEM:** Distorted audio.
CAUSE and SOLUTION: Input sensitivity is not set properly, or amplifier or source unit is defective. Check INPUT LEVEL setting, or check speaker wires for shorts or grounds.
- PROBLEM:** Distorted audio (PROTECT LED glows intermittently).
CAUSE and SOLUTION: Short circuit in speaker or wire. Remove speaker leads one at a time to locate shorted speaker or wire, then repair.
- PROBLEM:** Music lacks "punch."
CAUSE and SOLUTION: Speakers are not connected properly. Check speaker connections for proper polarity.

HIGH AND LOW SIDE DRIVER

Features

- Floating channel designed for bootstrap operation
Fully operational to 200V
Tolerant to negative transient voltage, dV/dt immune
- Gate drive supply range from 10 to 20V
- Undervoltage lockout for both channels
- 3.3V logic compatible
Separate logic supply range from 3.3V to 20V
Logic and power ground $\pm 5V$ offset
- CMOS Schmitt-triggered inputs with pull-down
- Shut down input turns off both channels
- Matched propagation delay for both channels
- Outputs in phase with inputs
- Also available LEAD-FREE

Product Summary

V_{OFFSET}	200V max.
$I_{O+/-}$	3.0A / 3.0A typ.
V_{OUT}	10 - 20V
$t_{on/off}$	95 & 65 ns typ.
Delay Matching	15 ns max.

Applications

- Audio Class D amplifiers
- High power DC-DC SMPS converters
- Other high frequency applications

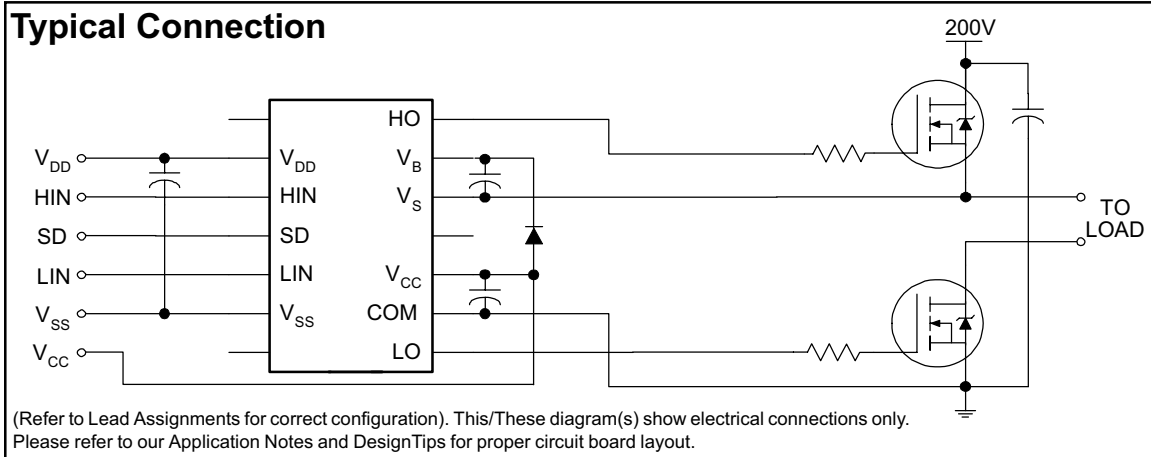

Description

The IR2010 is a high power, high voltage, high speed power MOSFET and IGBT drivers with independent high and low side referenced output channels, ideal for Audio Class D and DC-DC converter applications. Logic inputs are compatible with standard CMOS or LSTTL output, down to 3.0V logic. The output drivers feature a high pulse current buffer stage designed for minimum driver cross-conduction. Propagation delays are matched to simplify use in high frequency applications. The floating channel can be used to drive an N-channel power MOSFET or IGBT in the high side configuration which operates up to 200 volts. Proprietary HVIC and latch immune CMOS technologies enable ruggedized monolithic construction.

Functional Block Diagram

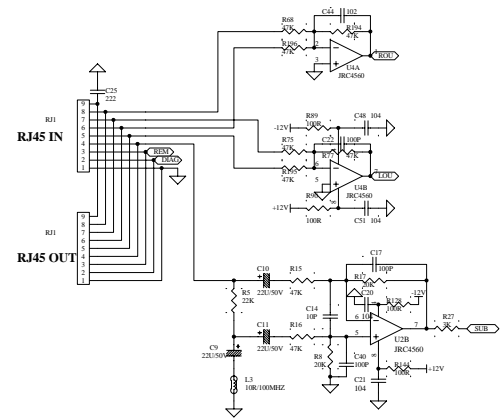

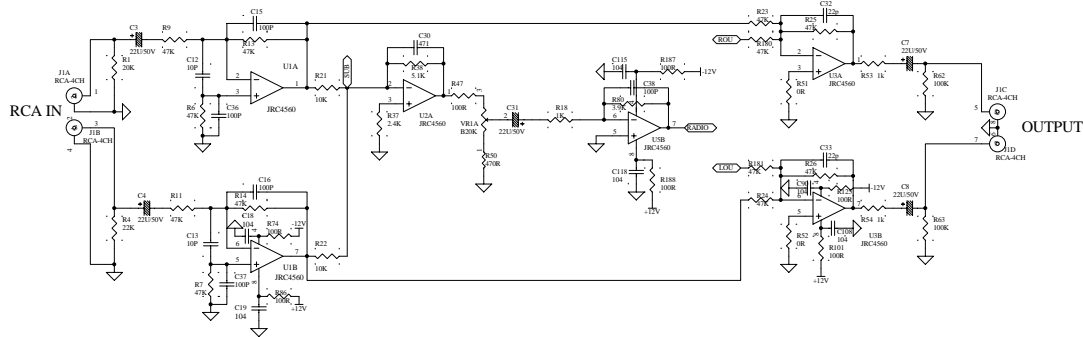

Lead Definitions

Symbol	Description
V _{DD}	Logic supply
HIN	Logic input for high side gate driver output (HO), in phase
SD	Logic input for shutdown
LIN	Logic input for low side gate driver output (LO), in phase
V _{SS}	Logic ground
V _B	High side floating supply
HO	High side gate drive output
V _S	High side floating supply return
V _{CC}	Low side supply
LO	Low side gate drive output
COM	Low side return
