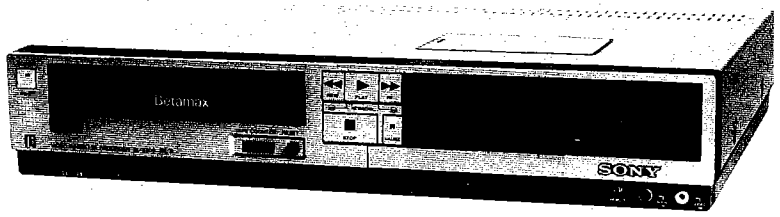
SERVICE MANUAL

US Model
Canadian Model

CP



December, 1983

711B CHASSIS

This manual contains the adjustment manual.

SPECIFICATIONS

System

Video recording system	Rotary two-head helical scanning
Video signal	EIA standards, NTSC color
Channel coverage	VHF channels 2 - 13 UHF channels 14 - 83
VHF output signal	Channel 3 or 4 (selectable) 75 ohms, unbalanced
Antenna	75-ohm external antenna terminal for VHF 300-ohm external antenna terminals for UHF

Video

Input	VIDEO IN : phono-type connector 1.0 V (p-p), 75 ohms, unbalanced, sync negative
Output	VIDEO OUT : phono-type connector 1.0 V (p-p), 75 ohms, unbalanced, sync negative
Signal-to-noise ratio	Better than 45 dB

Audio

Input	AUDIO IN : phono jack 100 k ohms, −10 dBs (0 dBs = 0.775 V rms)
Output	AUDIO OUT : phono jack Less than 10 k ohms, −10 dBs (100 k ohms load), unbalanced
Frequency response	βII : 50 - 12,000 Hz βIII : 50 - 9,000 Hz
Signal-to-noise ratio	Better than 40 dB

Tape transport

Tape speed	βI : 4.0 cm/sec. (playback only) βII : 2.0 cm/sec. βIII : 1.33 cm/sec.
Maximum recording time	βII : 3 hours 20 min. βIII : 5 hours (with Sony L-830 cassette)
Fast forward time	Under 4 min. (L-500)
Rewind time	Under 4 min. (L-500)

Timer

Clock	Synchronized with the power frequency
Time indication	12-hour cycle
Timer setting	Only for recording 1 event/ 3 days

General

Power requirements	120 V ac ±10%, 60 Hz ±0.5%
Power consumption	41.5 W
Operating temperature	5°C to 40°C (41°F to 104°F)
Storage temperature	−20°C to +65°C (−4°F to +149°F)
Dimensions	Approx. 430 × 80 × 385 mm (w/h/d) (17 × 3 1/4 × 15 1/4 inches) incl. projecting parts and controls
Weight	Approx. 9.6 kg (21 lb 3 oz)

Beta
VIDEO
CASSETTE RECORDER
SONY

MICROFILM

Consumer VIDEO

Accessories supplied

Remote Commander RM-59W (1)
EAC-25 external antenna connector (300-ohm to 75-ohm matching transformer) (1)
75-ohm coaxial cable with F-type connectors 2 m (6 feet) long (1)
300-ohm twin lead 2 m (6 feet) long (1)
Channel indicating segments (1 set)

Optional accessories

Betamax video cassette tape L-250, L-500, L-750, L-830, etc.
Video head cleaning cassette L-25CL
Color video camera CCD-G5, HVC-2000, HVC-2200, HVC-2400, HVC-2500, HVC-2800
AC adaptor for the camera HVA-220

Design and specifications subject to change without notice.

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY SHADING AND MARK ⚠ ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY. CIRCUIT ADJUSTMENTS THAT ARE CRITICAL TO SAFE OPERATION ARE IDENTIFIED IN THIS MANUAL. FOLLOW THESE PROCEDURES WHENEVER CRITICAL COMPONENTS ARE REPLACED OR IMPROPER OPERATION IS SUSPECTED.

ATTENTION AU COMPOSANT AYANT RAPPORT A LA SÉCURITÉ!!

LES COMPOSANTS IDENTIFIÉS PAR UN TRAMÉ ET UNE MARQUE ⚠ SUR LES DIAGRAMMES SCHÉMATIQUES, LES VUES EXPLOSÉES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DES SUPPLÉMENTS PUBLIÉS PAR SONY. LES RÉGLAGES DU CIRCUIT QUI SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNMENT SONT IDENTIFIÉS DANS CE MANUEL. SUIVRE LES PROCÉDURES QUAND LES COMPOSANTS CRITIQUES SONT REMPLACÉS OU LE FONCTIONNEMENT IMPROPRE EST SUSPECTÉ.

Please discard the Supplement-1 previously issued.

SUPPLEMENT-1

Adjustment Procedure Without Using Spectrum Analyzer

Page 213

5-4. VIDEO SYSTEM ADJUSTMENTS (Recording system)

14. Sink chip carrier frequency setting and FM deviation adjustment (YC-27 board)

Carry out this adjustment after confirming that the "Playback emphasis adjustment" of playback system adjustment 3 has been completed.
Carry out "Sink chip carrier frequency adjustment" and "FM frequency deviation adjustment" alternately, and repeat the operation until both adjustments have been satisfied.

14-1. Sink chip carrier frequency adjustment

Mode: Record or E-E
Signal: None (Insert short-circuiting plug into video input terminal)
Frequency counter: Emitter Q53 or CN2 ①

Adjustment procedure

1. Connect pin ③ of IC4 and pin ⑮ (12V line) with resistor (10kΩ to 15kΩ).
2. Adjust to 3.6 ± 0.04 MHz with RV17.
3. Disconnect connecting resistor.

14-2. FM frequency deviation adjustment

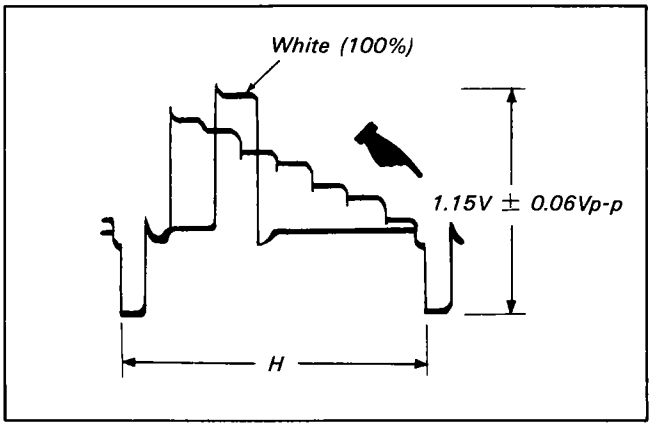
Mode: Self recording and playback
Signal: Color bar
Oscilloscope: Emitter Q51 (TP-8)

Adjustment procedure

1. Record color bar.
2. Playback the portion recorded.
3. Check to assure that the playback level is 1.15V ± 0.06 Vp-p.
4. When the specifications are not satisfied, turn RV16 as described in items 1 to 3 repeatedly as shown in table below, as seen from the pattern side.

: **corrected portion**

When the playback level is low.	Turn clockwise.
When the playback level is high.	Turn counterclockwise.



15. 1/2fH shift adjustment (YC-27 board and SS-25 board)

Mode: E-E
Signal: None (Insert short-circuiting plug into video input terminal)
Frequency counter: Emitter of YC-27 board or CN2 ①)

Adjustment procedure

1. Connect with jumper wire collector Q2 of SS-25 board and emitter Q3 (12V line).
2. Read out the frequency (approximately 3.7 MHz).
3. Disconnect jumper wire.
4. Connect with jumper wire collector Q2 of SS-25 board and emitter Q2 (GND).
5. Adjust to the following frequency with RV18. (Frequency read out in item 2) + 7.9 kHz ± 1 kHz
6. Disconnect jumper wire.

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
3. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
4. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
5. Check the line cord for cracks and abrasion. Recommend the replacement of any such line cord to the customer.
6. Check the B+ voltage to see it is at the values specified.
7. Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

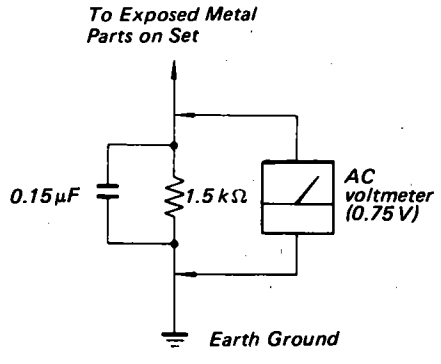

Fig. A. Using an AC voltmeter to check AC leakage.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

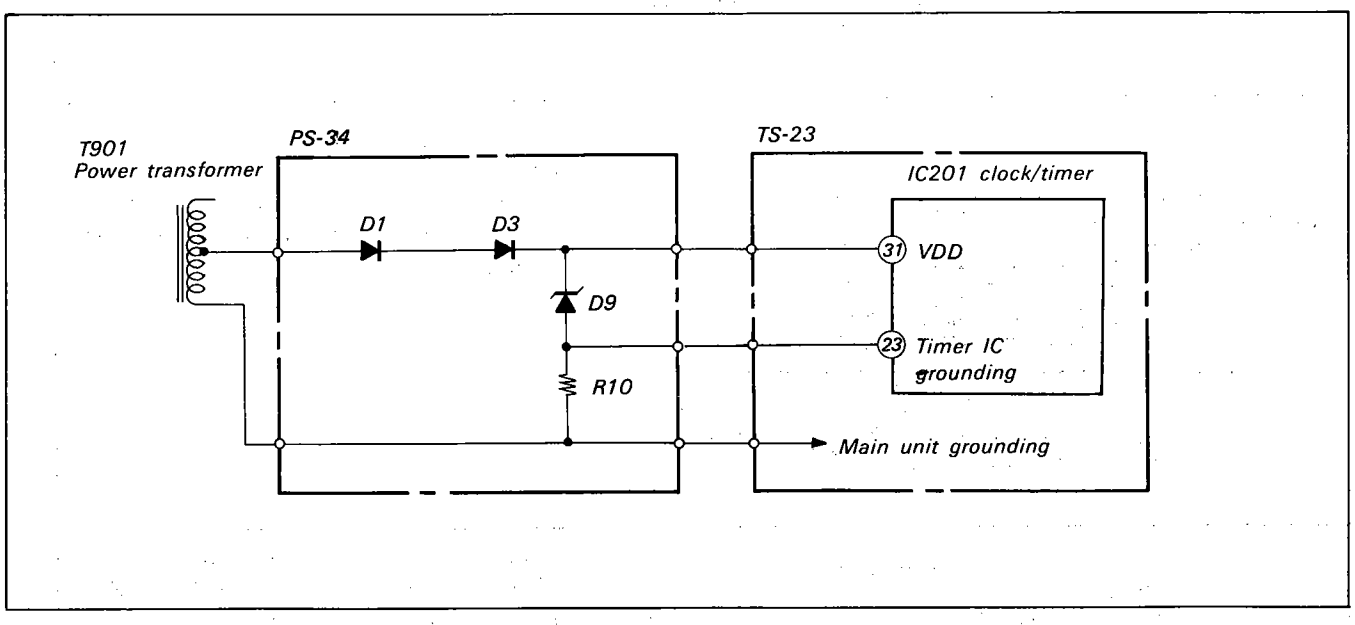
TABLE OF CONTENTS

OUTLINE

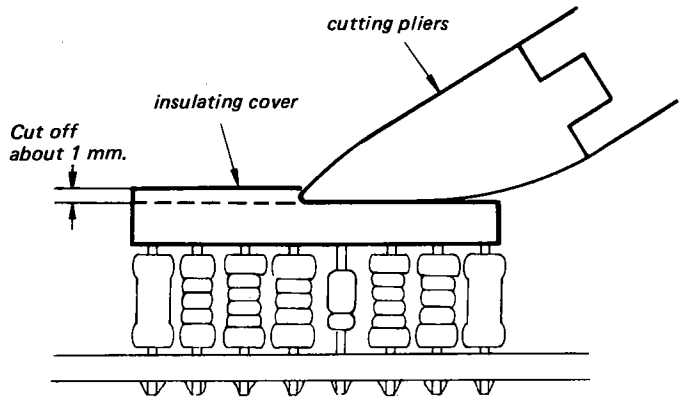
- Slim, easy-to-handle videocassette recorder, with a thickness of 8 cm
- Front loading
  Can be set at any place.
- Automatic rewind
  Automatically rewound at tape end in the REC (not including the TIMER REC mode.) and PB modes.
- Batascan/Bata SkipScan
  Can be quickly picture-searched during PB. FF and REW.
- Can be operated using a wired remote controller.
- When the unit enters the REC mode with the broken safety tab of a cassette, the cassette is automatically unloaded.

[Precautions on repairing]

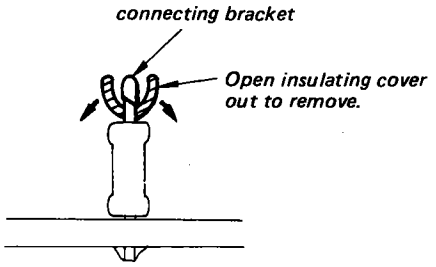
Be careful not to short-circuit between the timer IC grounding and main unit grounding (chassis).
The timer B + power supply (5V DC) are obtained at both ends of a Zener diode D9, and there is a potential difference of approx. 14.5V DC between the timer IC grounding and main unit grounding. Shorting-circuit between them may damage the timer IC (IC201).

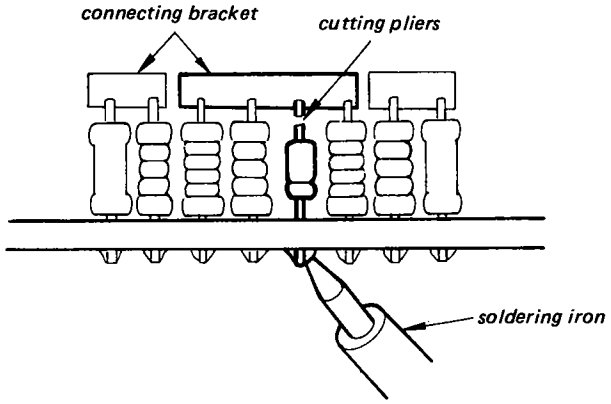


REPAIR METHOD FOR HYBRID CIRCUIT BLOCK

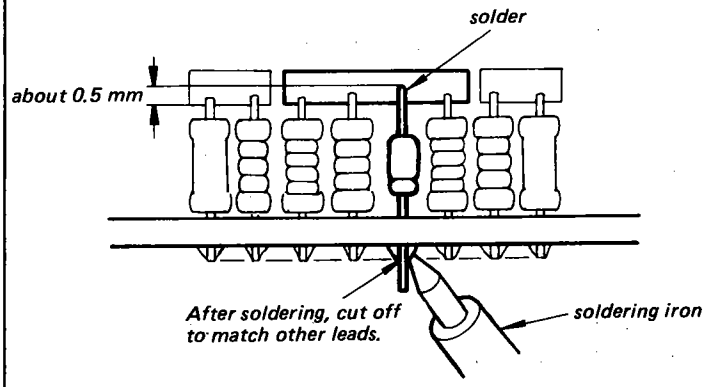


Using a cutting pliers, cut off the upper portion of the insulating cover about 1 mm, exposing the top of the connecting brackets.

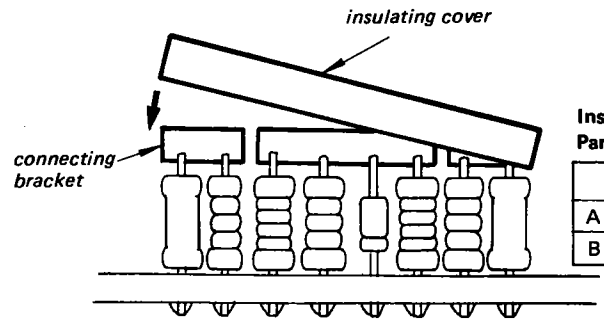




Cut off the lead of the defective part with cutting pliers. Remove solder and take out the defective part.



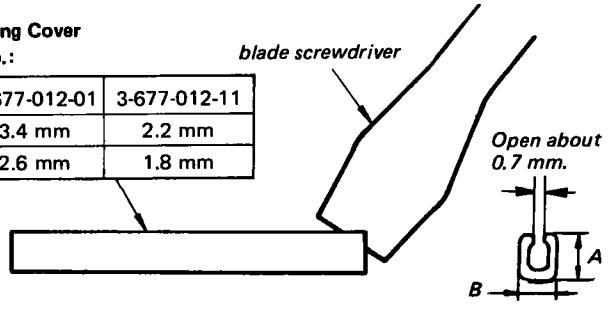
Insert the new part on the board and solder the lead to the board. Cut off the lead on the connecting bracket side so that it overlaps by about 0.5 mm, and solder to the connecting bracket.



Open the insulating cover groove about 0.7 mm and place over the connecting brackets, positioning one end first.

Insulating Cover Part No.:

	3-677-012-01	3-677-012-11
A	3.4 mm	2.2 mm
B	2.6 mm	1.8 mm



Handling Precautions for MOS ICs

Generally, the insulation resistance of the oxide layer in MOS IC structures is very high, and the oxide layer is very thin. Because of this, it is possible that the static voltages usually present on clothes and the human body will be enough to generate a potential difference across the insulator, high enough to cause a breakdown of the insulating layer.

The following precautions should be taken while handling these ICs.

(Particular care should be taken under conditions of low humidity.)

Precautions in Replacing MOS ICs

1. Store new ICs by inserting them into a urethane-polyester cushion (which is somewhat conductive), or wrapping it in aluminum foil, so that all the pins are at the same potential.
   (The ICs should be stored in that manner until mounted on the circuit board.)

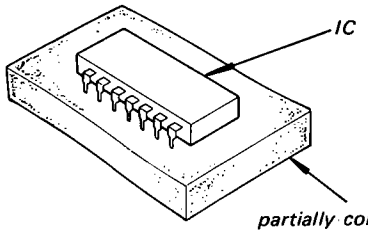


Fig. A

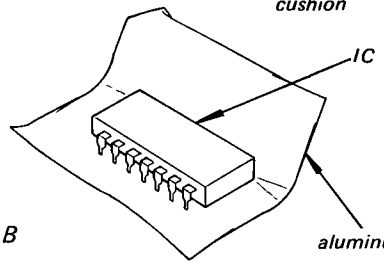

Fig. B

2. Check the soldering iron for possible power-line leakage current. Make sure that there is no leakage path by connecting an ohmmeter to the tip of the soldering iron and the plug as shown in Fig. C. If there is a leakage path, use some other soldering iron.

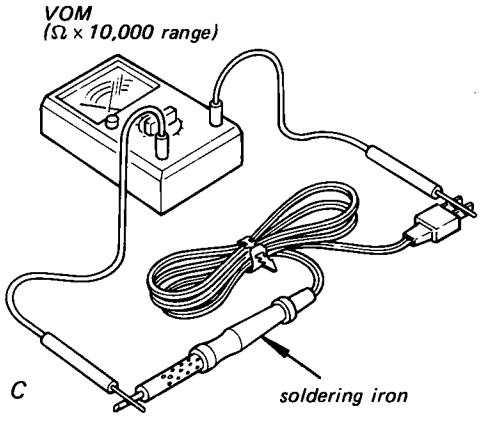

Fig. C

3. Equalize any potential difference between the clothes, the tools in use, the work bench, the set being worked on, and the packaged IC by touching them all in succession with the hands or a conductive wire or tool.
4. The following are effective methods for handling ICs that remove the potential difference across the oxide layer.
   - Use a paper clip modified by soldering in a wire braid insert.

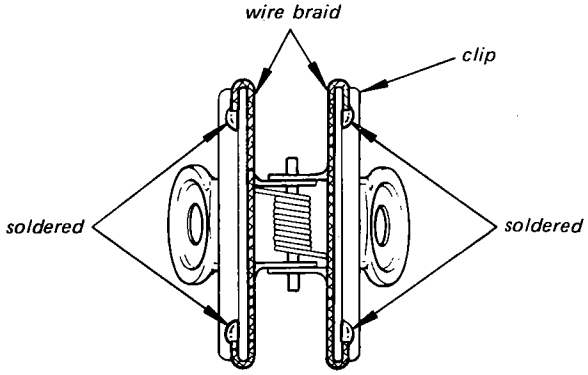

Fig. D

Make sure that there is no solder on the inside.

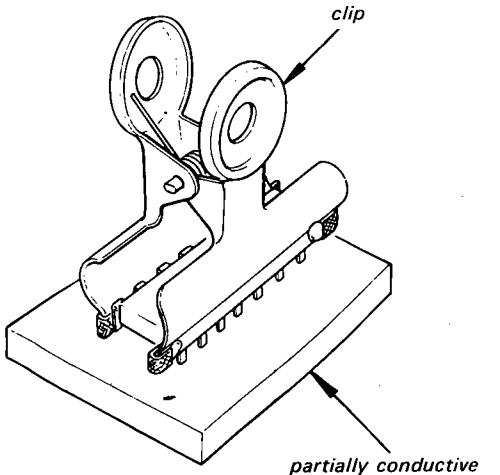

Fig. E

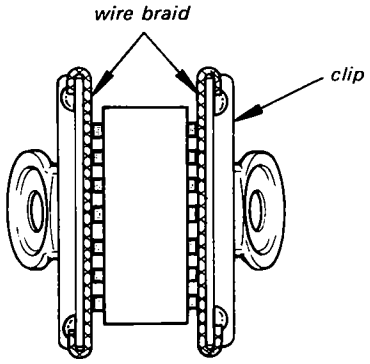

Make sure that all the pins are in contact with the wire braid (all the pins will then be at the same potential.).

Fig. F

- Take a short length of fine bare wire and wind it around the IC so that it shorts all the pins of the IC, while it is still in the urethane-polyester cushion or aluminum foil. This ensures that all the pins are at the same potential.

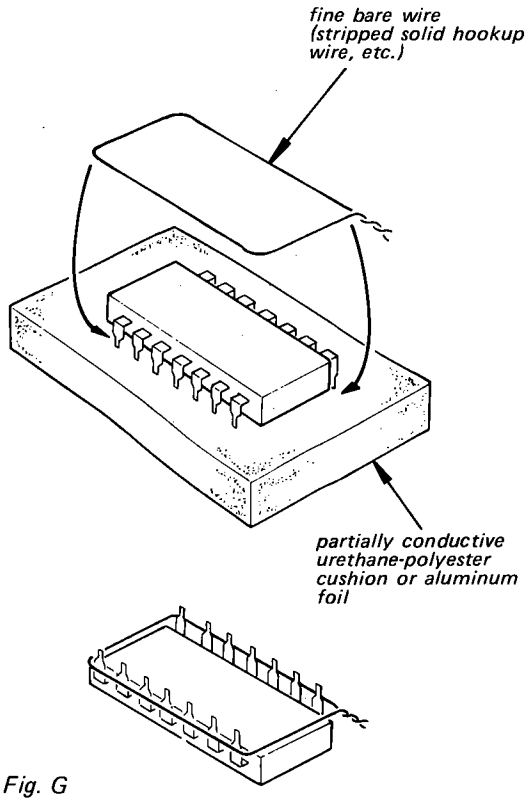

Fig. G

- When it is necessary to handle the IC with the fingers, do not touch any pin, and hold the IC at the ends of its plastic-package case as shown in Fig. H.

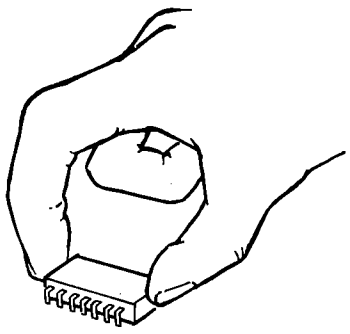

Fig. H

5. Method of Mounting
Insert the IC while holding it with the modified clip, and solder all the pins with the clip still shorting the pins. (Similarly, solder all the pins while the bare shorting wire is still wound around them.). Remove the clip or the bare shorting wire only after all the pins have been soldered.

Precaution while Checking C-MOS ICs

The C-MOS ICs (Complementary MOS) are MOS ICs that have their output sections made up of N-channel and P-channel push-pull stages to increase their speed of operation. If the output terminal of these ICs comes into contact with B+ or B– voltage, then the FET which is ON at that time will either become shorted or open.

This is valid for all the output sections that are connected together by the interconnections. Even the circuits that are physically separated (and not on the same board) can be destroyed simultaneously.

Example:

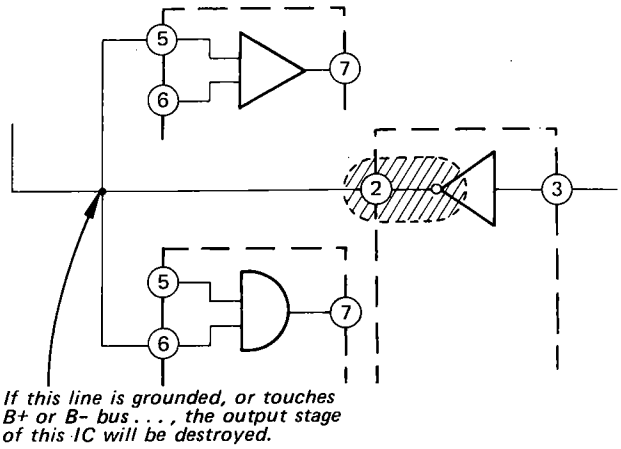

Fig. I

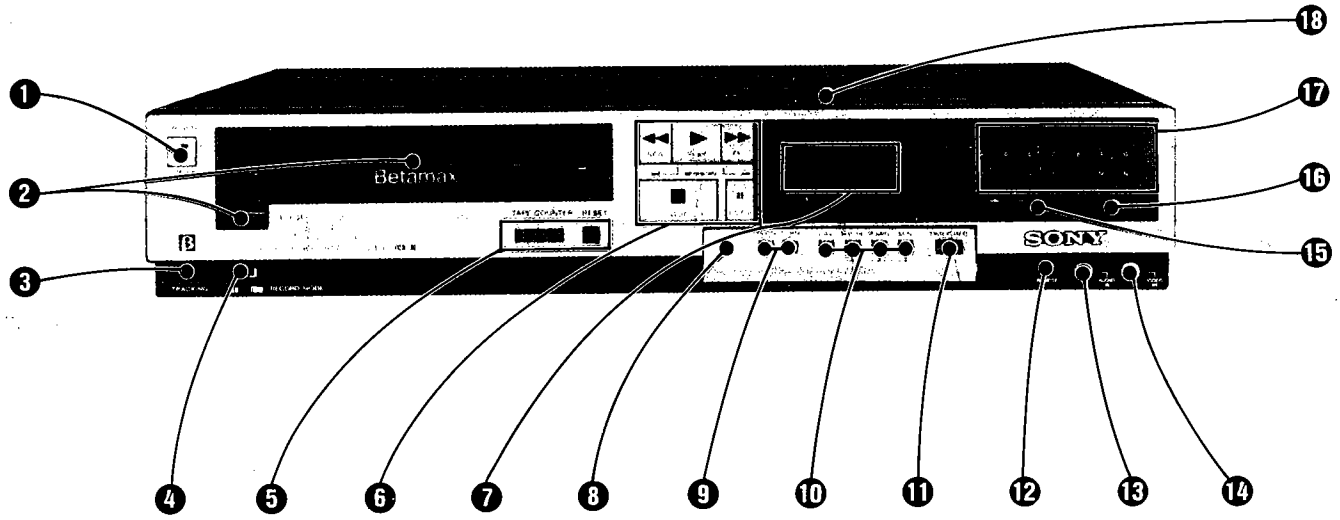
SECTION 1
GENERAL

1-1. LOCATION AND FUNCTION OF CONTROLS



❶ POWER switch and lamp
Press to turn the power on. The lamp will light up.
To turn the unit off, press the switch again.
The timer section will continue to operate and the time will be displayed even if the power switch is off, as long as the ac power cord is plugged into a working outlet.

❷ Cassette compartment and ⏏ EJECT button
After turning on the recorder, insert a cassette to be recorded or played back. To remove the cassette, press the ⏏ EJECT button.

❸ TRACKING control
The center detent position provides the correct tracking for the cassettes recorded on this recorder.
If streaks or snow appears in the playback of a cassette which has been recorded on another video cassette recorder, turn this knob to obtain the best possible picture.

❹ RECORD MODE selector
Select either SII or SIII to set the recording speed. In playback, the appropriate SI, SII or SIII mode will be automatically selected.

❺ TAPE COUNTER and RESET button
The TAPE COUNTER provides a numerical reference point while recording; this can be used to index a recorded cassette.
To reset the counter to zero, press the RESET button.

❻ Function buttons
Control tape transport.

❼ Time display window
Normally the actual time is displayed here. While the timer is being set, the time and day settings are displayed. Tomorrow is the "2nd Day" and the day after tomorrow is the "3rd Day". For today's timer setting, day indication will not be displayed.

❽ CLOCK button
Use this button to set present time.

❾ TURN ON/OFF buttons
Use these buttons when setting the turn-on or turn-off time of timer activated recordings.

❿ DAY, HOUR, 10 MIN, MIN buttons
Use these buttons to set the turn-on day and time settings or the turn-off time setting while pressing the TURN ON or OFF button.

⓫ TIMER REC button and indicator
Press for timer-activated recording. While the timer is in operation, the indicator will be lit.

⓬ REMOTE jack (special mini type)
Connect the supplied Remote Commander RM-59W to this jack.

⓭ AUDIO IN jack (phono type)
This jack accepts audio signals. Connect it to the line output of a piece of audio equipment, such as an amplifier, tape recorder, etc., or to the audio output of another video recorder or a camera. When the plug is inserted in this jack, the signal from the TV tuner cannot be recorded.

⓮ VIDEO IN jack (phono type)
This jack accepts video signals from a camera, another video recorder etc. When the plug is inserted in this jack, the signal from the TV tuner cannot be recorded.

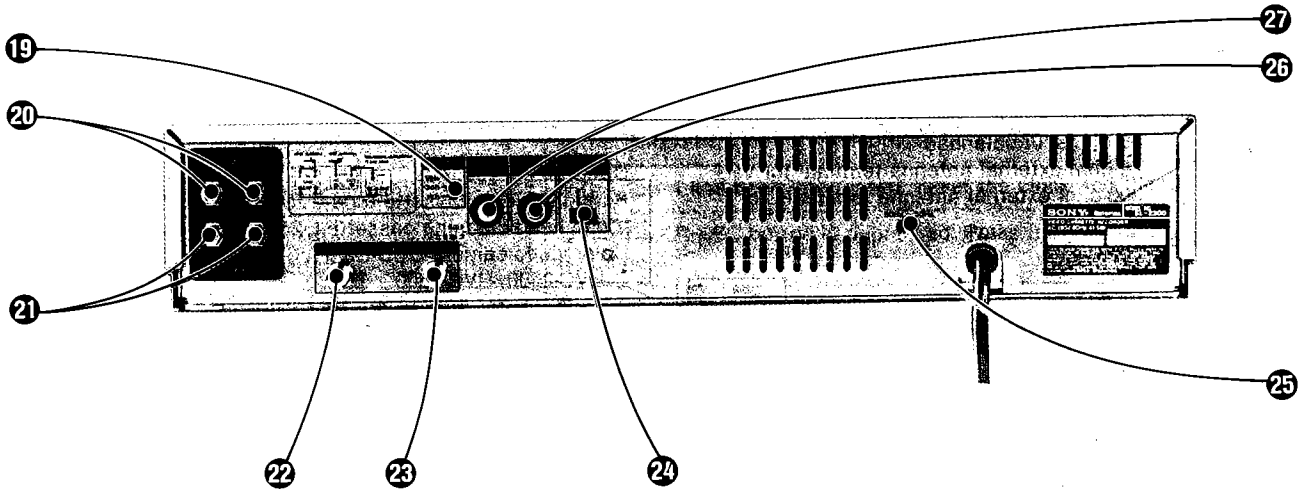
⓯ RECORD switch and lamp
Slide to the right to start recording. While a recording is being made, the lamp lights up.

⓰ PROGRAM SELECT button and VTR lamp
To view a TV program selected by a channel select button on the recorder or to monitor the picture being recorded, press this button so that the VTR lamp lights up. When the ▶ button on the recorder is pressed, the unit is automatically set in this mode. To view a TV program in the usual manner, press this switch so that the lamp goes off. When the recorder is turned off, the recorder is automatically set in this mode.

⓱ Channel select buttons and indicators
Select the channel to be recorded or to be viewed with these buttons. The selected channel number will light up.

⓲ Tuning compartment
All the switches and buttons for channel presetting are in this compartment.

Rear



⑲ RF UNIT selector
Select the output channel at the VHF OUT terminal. Set the switch to 3ch or 4ch, whichever is not active in your area.

⑳ UHF IN terminals
Connect a UHF TV antenna here.

㉑ UHF OUT terminals
Connect to the UHF antenna terminals of the TV receiver to be able to view UHF TV programs even when the recorder is turned off.

㉒ VHF IN terminal
Connect a VHF TV antenna here.

㉓ VHF OUT terminal
Connect to the VHF antenna terminal of the TV receiver. The signal of a VTR program (converted to channel 3 or 4) and the VHF TV signal will be supplied to the TV receiver.

㉔ CAPTIONS/PCM switch
Normally set to the right position. For receiving captioned TV programs or for PCM recording and playback, set this switch to the left position.

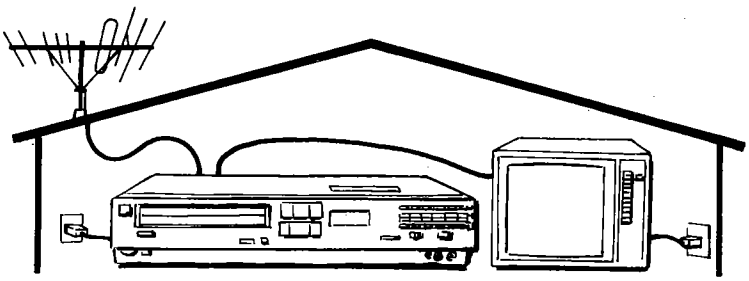
㉕ Frequency select switch (under a rubber cover)
Set to either 50 Hz or 60 Hz in order to match the local power supply.

㉖ AUDIO OUT jack (phono type)
This jack provides the audio signals from this recorder.
Connect it to the line input of an audio equipment, such as an amplifier, tape recorder, etc., or to the audio input of another video recorder or a video monitor.

㉗ VIDEO OUT jack (phono type)
This jack provides the video signal from this recorder.
Connect it to the video input of another video recorder or a video monitor.

1-2. ANTENNA CONNECTIONS

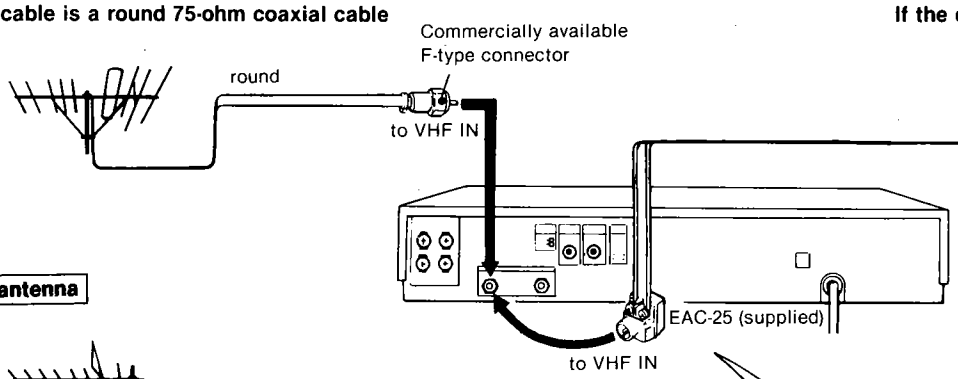
Disconnect the TV antenna cables from the TV receiver and connect them to the recorder.



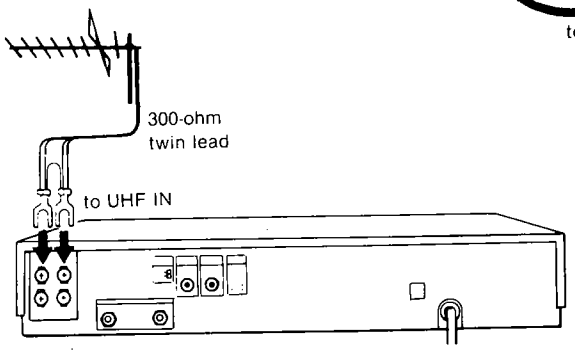
VHF antenna

If the cable is a round 75-ohm coaxial cable

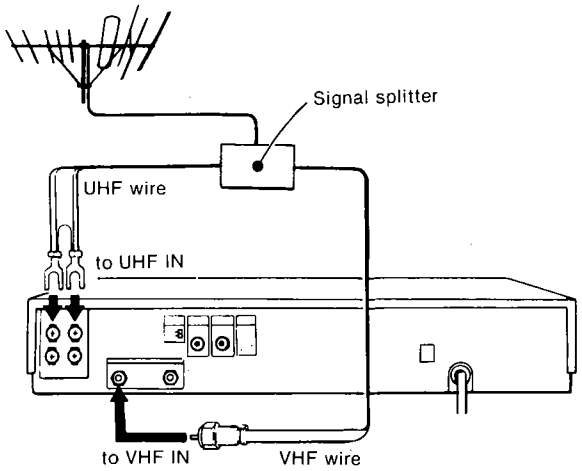
If the cable is a flat 300-ohm twin lead



UHF antenna

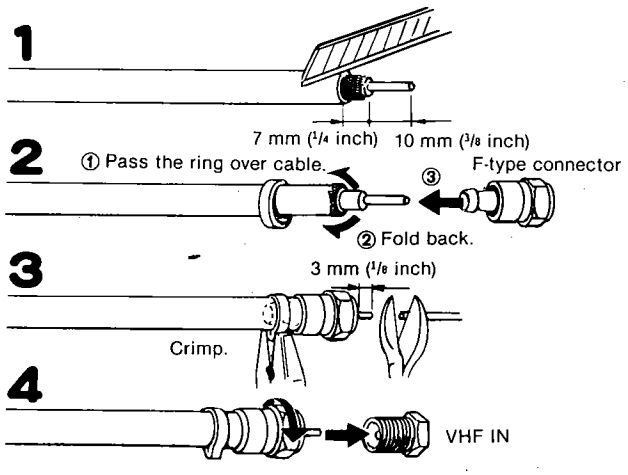


Combination VHF/UHF antenna

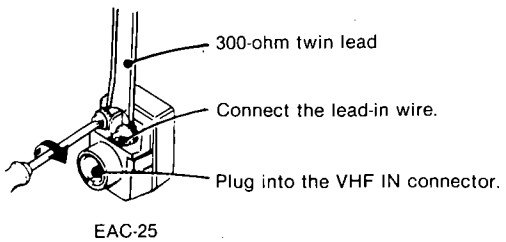


Most combination antennas are equipped with a signal splitter. If you need a splitter or a complete antenna system, see your Sony dealer or a qualified technician.

How to attach an F-type connector



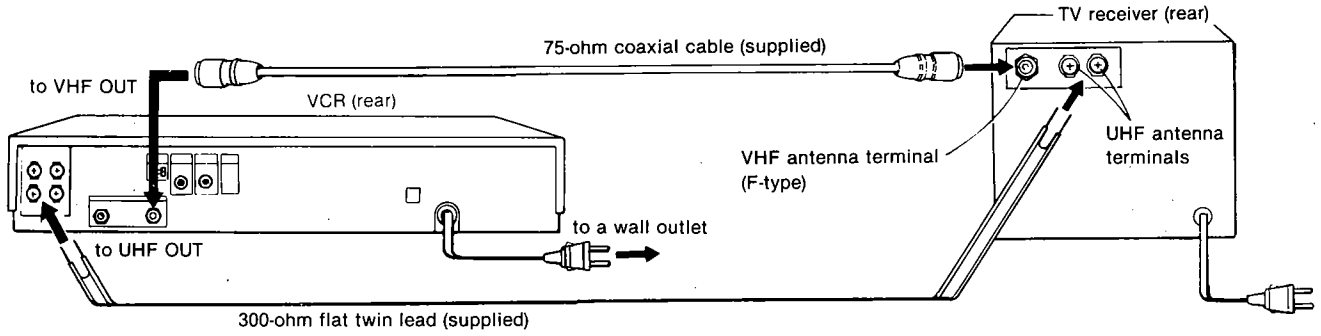
How to attach an EAC-25 external antenna connector



1-3. CONNECTING THE TV RECEIVER

Connecting a conventional TV receiver
Once the connections shown below have been made, the TV antenna signals, as well as the signal from the recorder, will be fed to the TV and you can view TV programs in the usual way.

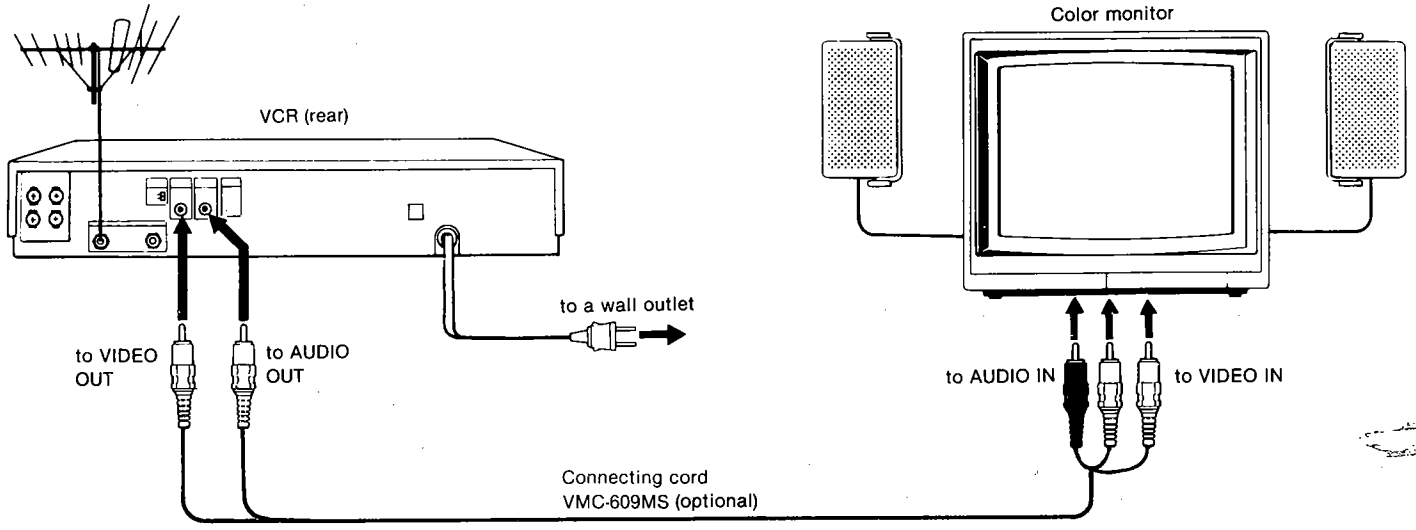
● Use an optional RFC-8 extension cable, 8 m (25 ft) long, if the supplied 75-ohm coaxial cable is not long enough.



Caution
Connections between the recorder VHF OUT connector and the antenna terminals of a TV receiver should be made only as shown in these instructions. Failure to do so may result in operation that violates the regulations of the Federal Communications Commission regarding the use and operation of rf devices.
Never connect the output of the recorder to an antenna or make simultaneous (parallel) antenna and recorder connections at the antenna terminals of your receiver.

Connecting a color monitor
To obtain a better-quality picture, connect a color monitor, such as the Sony Profeel Trinitron Component TV, instead of a conventional TV receiver.

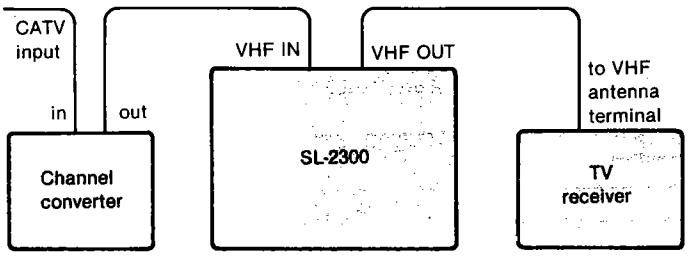
If you use a component TV tuner together with the monitor, connect the recorder and the TV tuner in the same way as in the case of the recorder and the conventional TV receiver described above.
For details on the connection of the TV tuner and the monitor, refer to the instruction manual of the TV tuner.



1-4. CONNECTIONS TO A CABLE TV (CATV) SYSTEM

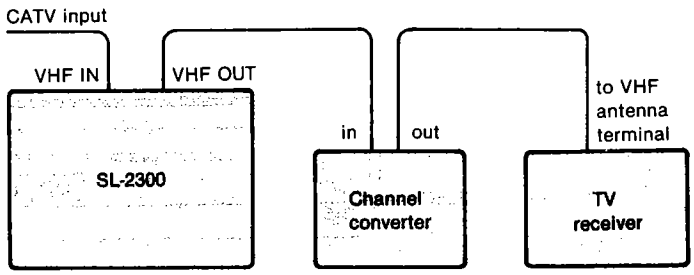
●We recommend that you consult with your cable television company for proper connection of your Betamax unit to your cable TV system.
●Before operating the recorder with a cable TV system, set the RF UNIT channel selector on the recorder to channel 3 or 4, whichever is not active in your area.
If both channels are viewable, check which gives better results by switching between channels 3 and 4.

System A



In the above configuration, you can record programs from all CATV channels as well as VHF channels 2 through 13.
Set the TV channel selector to the same channel as the RF UNIT channel selector. Set the channel select button on the recorder to receive the output channel of the converter.
Press the PROGRAM SELECT button on the recorder to turn the VTR lamp on. Now the channel to be viewed or to be recorded is selected on the converter.

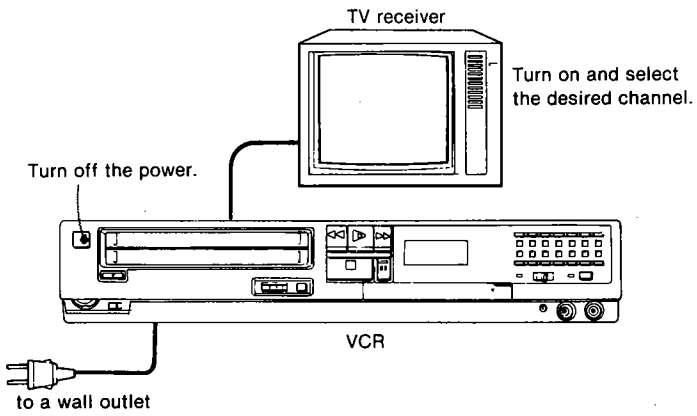
System B



In this configuration, you can view a program from the converter while recording a program from VHF channels 2 through 13 via the recorder.
Set the TV channel selector to the output channel of the converter and press the PROGRAM SELECT button to turn the VTR lamp off.
For playback, set the channel selector on the converter to the same channel as the RF UNIT channel selector.
When a channel converter is not used, connect the CATV input to the recorder; then connect the recorder and the TV receiver as shown in the previous TV connection diagrams.

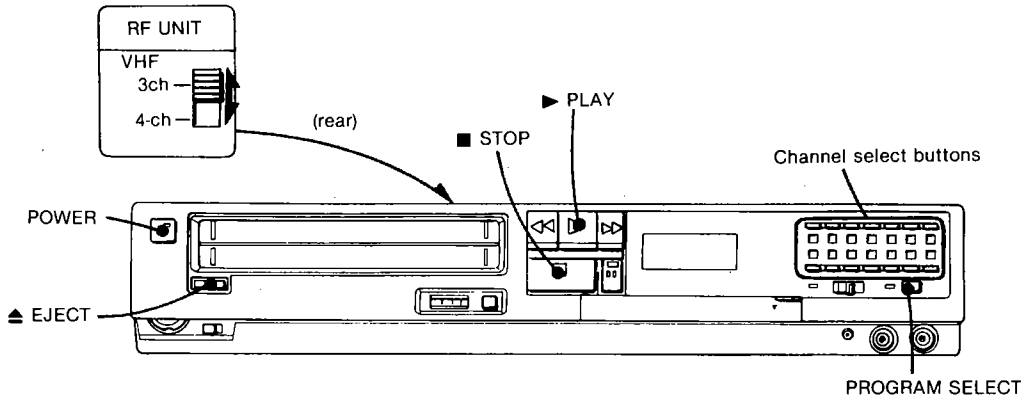
1-5. WATCHING TELEVISION

You can watch television in the usual way with the recorder connected.



1-6. ADJUSTING THE TV

Adjust your TV receiver to receive the signal from your recorder.
If you have connected a color monitor, this adjustment is not necessary.



If you do not have a recorded video cassette tape

❶ Set the RF UNIT channel selector located at the rear of the recorder to 3CH or 4CH whichever channel is not active in your area.
❷ Push in the POWER switch. The lamp lights.

❸ Press the PROGRAM SELECT button to turn the VTR lamp on.
❹ Select an active channel in your area with a channel select button on the recorder.

If you have a recorded video cassette tape

❸ Insert the cassette with the round window to the left.
❹ Press the ▶ button.

❺ Turn on the TV.
❻ Set the TV receiver to either VHF channel 3 or 4 to agree with the setting of the RF UNIT channel selector.
The TV program selected on the recorder or the tape-program will be displayed on the TV screen. If a picture does not appear on the TV screen or if the display is not clear, fine-tune the channel on the TV.
● For details about TV channel adjustment, see the instruction manual of the TV receiver.

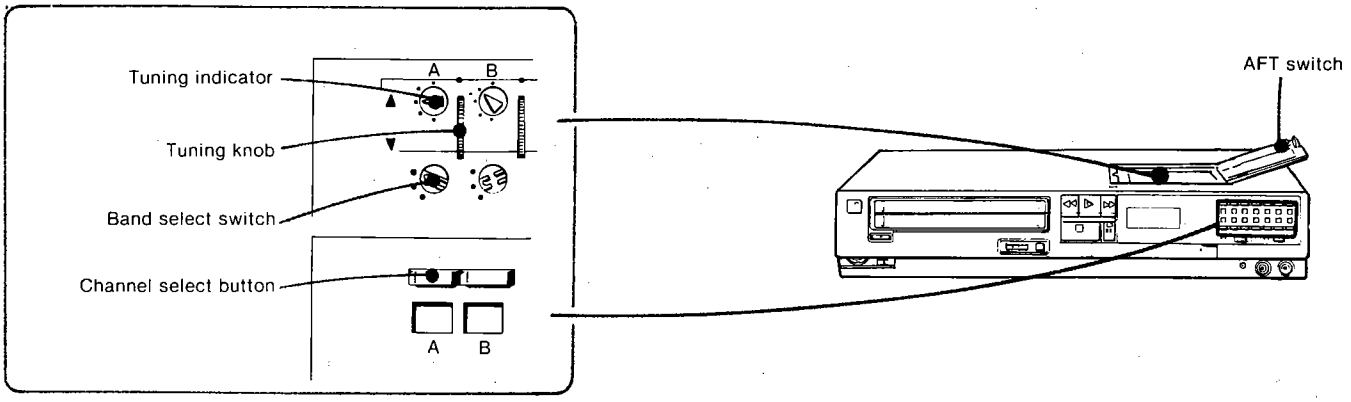
Check!
Check that the program displayed on the screen changes when a different channel select button on the recorder is selected.
If the program does not change, repeat the preceding steps.

Check!
Check that the display on the screen changes when you stop the tape by pressing the ■ button on the recorder. (To eject the cassette, press the ⏏ button.)
If the program does not change, repeat the preceding steps.

Now your TV receiver is tuned to the recorder. Whenever you use the video recorder, you should set the TV to the channel which you have chosen above.

1-7. TO SET UP AND FINE-TUNE THE VHF AND UHF CHANNELS IN YOUR AREA

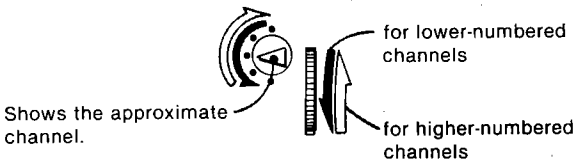
The channel select buttons are pre-adjusted at the factory to VHF channels 2 through 13 and to UHF channels 14 and 43.
These pre-adjusted channels may be set up to receive any available VHF/UHF station in your area. To set up and fine-tune channels, open the tuning compartment on the top of the recorder and proceed as follows :



❶ Turn the recorder and the TV receiver on.
❷ Make sure that the TV receiver is set to the correct channel for the video recorder.
❸ Press the PROGRAM SELECT button to turn the VTR lamp on.
❹ Push the recorder channel select button to be preset.
The associated channel indicator will light.
❺ Set the band select switch associated with the pushed button to one of these positions : VL (VHF Low), VH (VHF High), or U (UHF). Use a screwdriver if necessary.

To tune in channels 14 through 83 — U
To tune in channels 7 through 13 — VH
To tune in channels 2 through 6 — VL

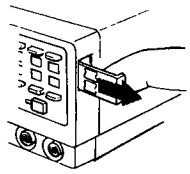
❻ Tune by turning the corresponding tuning knob, watching the TV screen until the picture of the desired channel is clearly displayed and the sound is clear.



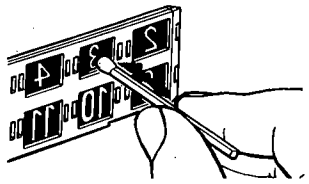
❼ Repeat steps ❹, ❺ and ❻ for the other channel select buttons.
❽ When all stations have been set up as desired, check that the AFT switch is set to ON.

To replace the channel indicating segments
Channel indicating segments are supplied for identification of the preset channels. Insert the segments as follows :

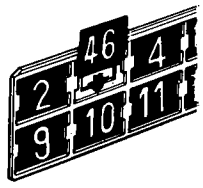
❶ Pull out the channel indication plate.



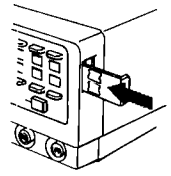
❷ Press the segment out from the rear.



❸ Pick out the appropriate segments for the channels preset and insert them into the plate.

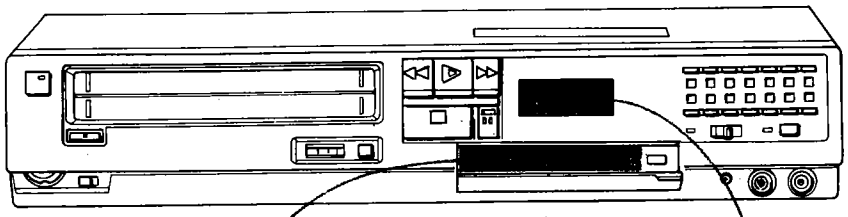


❹ Replace the plate.

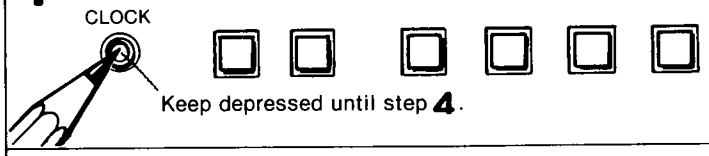


1-8. SETTING THE CLOCK

When you connect the ac power cord to a wall outlet, the clock indicates 12:00 a.m. and blinks to show that it must be set.
To set the clock to **8:35 a.m.** for example, proceed as follows :

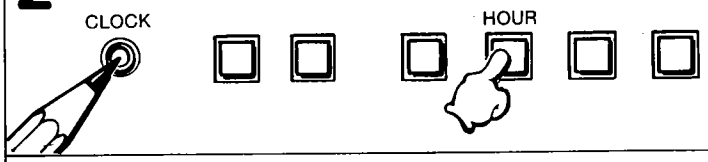


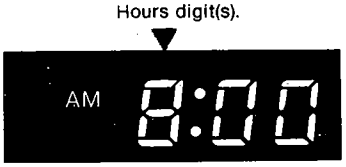
1 Press, and keep depressed, CLOCK button until step **4**.



Stops blinking.

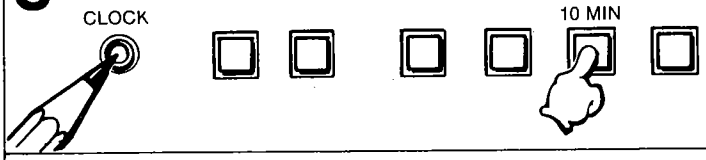
2 Set the hour digit(s).

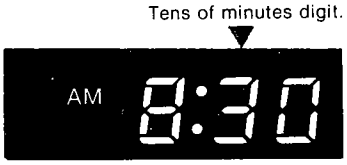




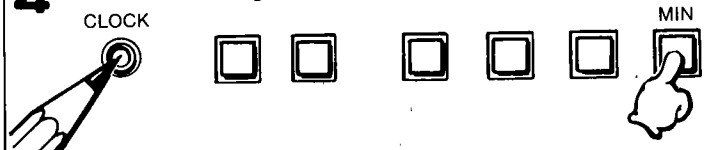
PM 12 : 00 ... noon
AM 12 : 00 ... midnight

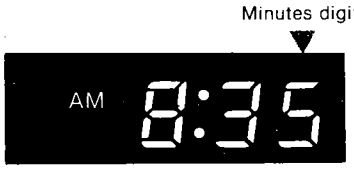
3 Set the tens of minutes digit.



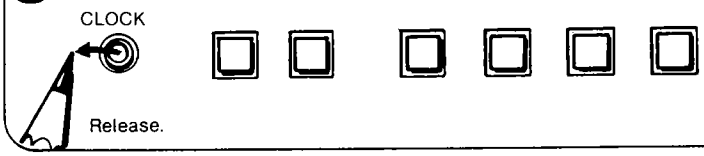


4 Set the minutes digit.





5 With the time signal, release CLOCK button. The clock will start.



The clock will start operating, showing the correct time.

Setting the hours and minutes digits
The HOUR, 10 MIN and MIN buttons can be pressed in two ways :

When you hold a button down, the digits will advance continuously until the button is released.

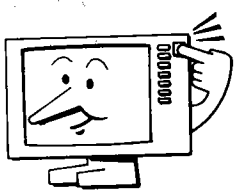
When you press and immediately release a button, the digits will advance by one.

1-9. HOW TO RECORD TV PROGRAMS

Caution

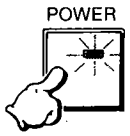
Television programs, films, video tapes and other materials may be copyrighted. Unauthorized recording of such material may be contrary to the provisions of the copyright laws.

1



Turn on the TV and select the channel for the video recorder.

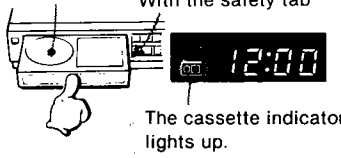
2 Press POWER switch.



3 Insert a cassette.
(Make sure the power is turned on.)

With the round window to the left

With the safety tab

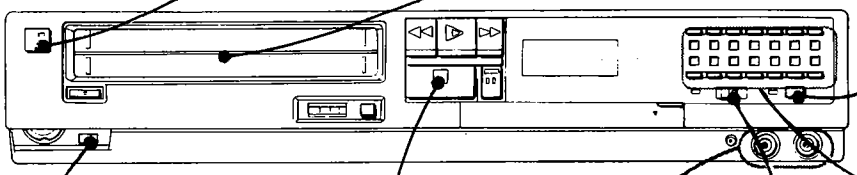


The cassette indicator lights up.

Do not push the cassette in forcibly.

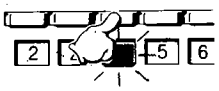
4 Press PROGRAM SELECT button.

The lamp should light up.

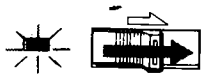


Nothing should be connected to the AUDIO IN and VIDEO IN jacks

5 Select the channel to be recorded.



6 Slide the RECORD switch to the right.

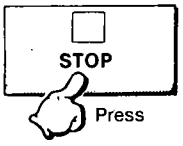


Recording will begin.

If the inserted cassette has its safety tab removed, the cassette will be automatically ejected.

7

To stop recording



To eject the cassette, press the ⏏ button.

RECORD MODE selector
Set to either ⅁II or ⅁III.

Recording time available in each mode

Cassette used	⅁II	⅁III
L-125	30 min.	45 min.
L-250	1 hr.	1 hr. 30 min.
L-500	2 hr.	3 hr.
L-750	3 hr.	4 hr. 30 min.
L-830	3 hr. 20 min.	5 hr.

To stop the tape momentarily

Press the ⏸ PAUSE button. The lamp on the button will blink. The TV program will still appear on the TV screen, but the picture will not be recorded.

To resume recording, press the button again.

To protect the video heads and the tape, the pause mode will be automatically released after about 8 minutes and recording will resume.

RECORDING ONE TV PROGRAM WHILE VIEWING ANOTHER

You can record a TV program selected on the recorder while viewing another TV program.

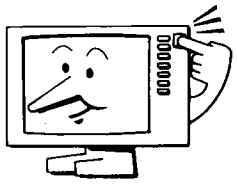
❶ Start recording the desired TV program following the above procedures.

❷ Press the PROGRAM SELECT button so that the VTR lamp goes off.

❸ Select the channel you want to view with the channel selector on the TV.

1-10. HOW TO PLAYBACK A RECORDED TAPE

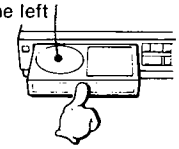
1 Turn on the TV and select the channel for the video recorder.



2 Press POWER switch.

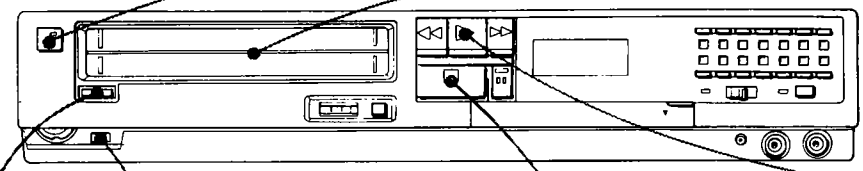
3 Insert a cassette.
(Make sure the power is turned on.)

With the round window to the left



The cassette indicator will light up.

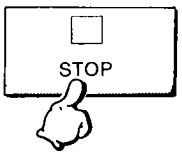
• Do not push the cassette in forcibly.



During playback, the ▯I , ▯II or ▯III mode is automatically selected depending on which mode the tape to be played back was recorded in.

To eject the cassette, press the ⏏ button.

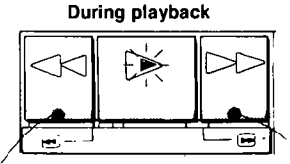
To stop playing,
press STOP BUTTON



4 Press PLAY button.

BETASCAN ... **Viewing the picture at a fast speed to find a particular scene**

During playback

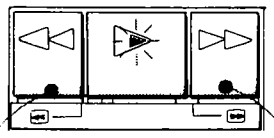


Press for a fast backward movement.

Press for a fast forward movement.

At the desired point, release the button.
The normal playback will resume.

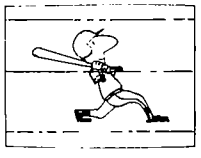
BETA SKIPSCAN ... **Viewing the picture momentarily during rewind or fast-forward**



While rewinding the tape, press again and keep it depressed for backward movement.

While rapidly advancing the tape (fast forward), press again and keep it depressed for forward movement.

At the desired point, release the button. The normal rewind/fast forward mode will resume.

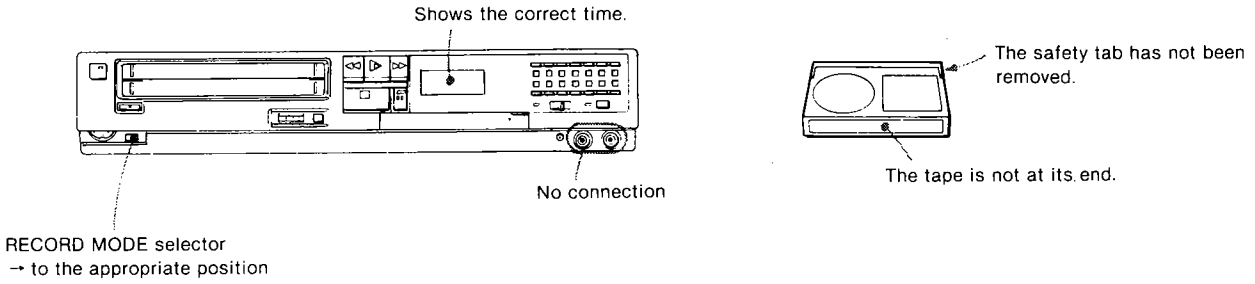


Streaks will appear and sound will be muted during Betascan or Beta Skipscan picture.

1-11. TIMER-ACTIVATED RECORDING

This timer can only be used to start and stop recording. You can set one turn-on time and one turn-off time for recording within the next 3 days.
The clock time must first be set to the correct time. To set the clock

Check before operation!



1 Press POWER switch.

POWER

2 Insert a cassette.

(Make sure the power is on.)

Cassette indicator

Do not push in forcibly.

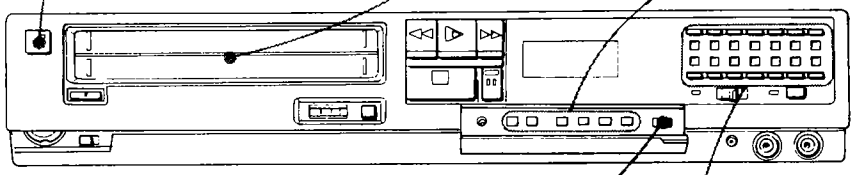
3 Set the turn-on day and time.

Suppose you want to make a recording from 6:25 p.m. to 7:30 p.m. tomorrow.

TURN ON TURN OFF DAY HOUR 10 MIN MIN

Keep depressed.

For today's timer recording, day indication should not appear on the display window.



4 Set the turn-off time.

You cannot set a turn-off time without setting a turn-on time.

TURN ON TURN OFF DAY HOUR 10 MIN MIN

Keep depressed.

5 Select the channel to be recorded.

6 Press TIMER REC button.

"TIMER REC" indicator will light up and the power of the recorder will be turned off.

At the preset turn-on time, recording will start automatically and will continue to the preset turn-off time or to the end of the tape, at which time the recorder will be automatically turned off.

To check the timer setting
Press the TURN ON button to check the turn-on day/time and the TURN OFF button to check the turn-off time. You can reset the turn-on day/time and turn-off time separately, if necessary.

When the timer-activated recording is finished
Press the TIMER REC button to release it.
If you leave the TIMER REC button depressed, the timer recording will be activated at the same time everyday as long as the tape remains.

If the "TIMER REC" and "⊙■" indications blink and power is not turned off when the TIMER REC button is pressed, check that a cassette has been inserted.

If the inserted cassette is automatically ejected when the TIMER REC button is pressed, check that the safety tab on the cassette has not been removed. (See page 10.)

> **NOTICE:** ONCE THE TIMER REC LAMP HAS LIT UP, no function of the recorder can be activated, except the timer section settings. To operate the recorder after setting the timer, depress the TIMER REC button to release it.

To record to the end of the tape
Set the turn-off time a little after the time the tape would normally run out.

To interrupt a timer-activated recording
Press the ■ STOP button and the recorder will be turned off; then press the TIMER REC button to release it.
To set the unit to make the next timer recording on the same cassette, eject and insert the cassette again.

WHEN A POWER INTERRUPTION OCCURS

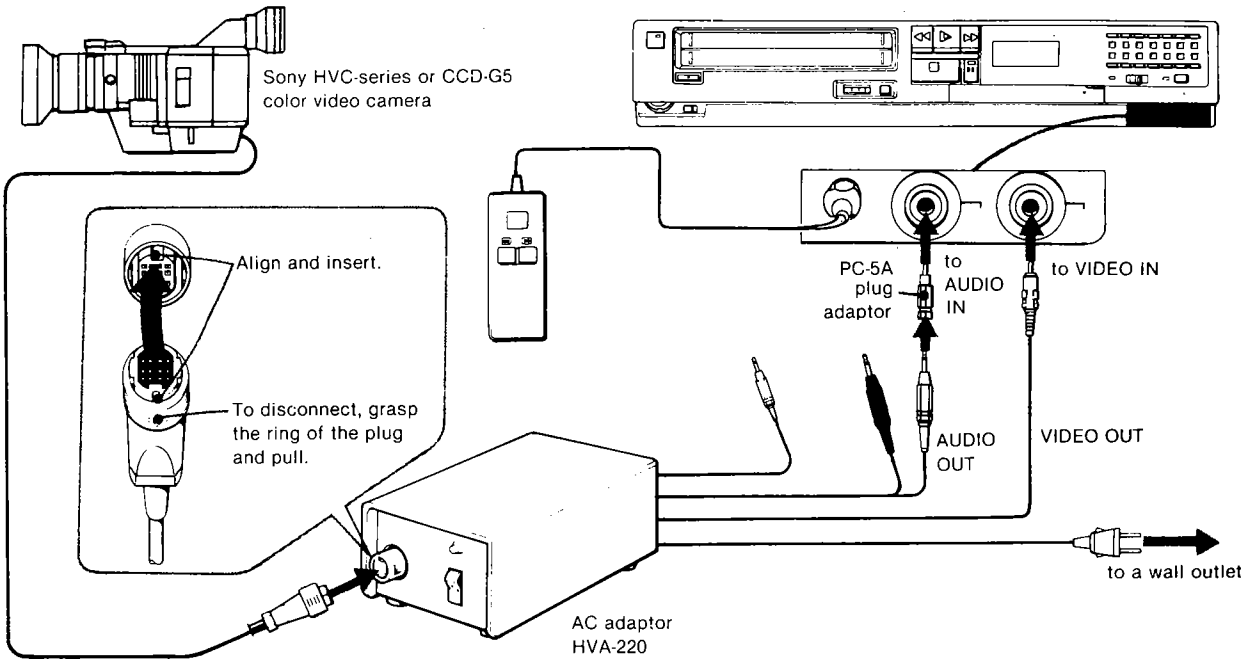
If the clock shows "AM 12:00" and blinks, all the timer settings have been erased. Reset the clock time and the timer settings.

If the clock still shows the correct time, the power has been interrupted for less than 10 seconds, and the timer programs are retained in the memory.

1-12. CAMERA RECORDING . . . . For producing your own programs

CONNECTIONS

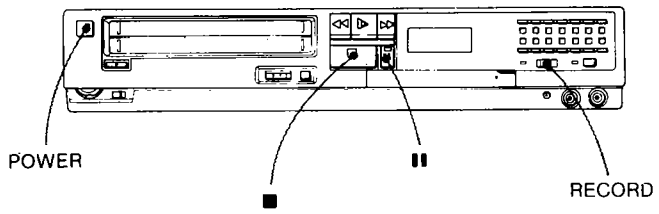
- The camera must conform to American TV (EIA) standards.
- The use of a Sony HVA-220 ac adaptor is required.



To record the sound from other audio sources

Connect an audio source, such as a tape recorder, into the AUDIO IN jack.

OPERATION



❶ Press the POWER switch to turn on the recorder and insert a cassette.
❷ Turn on the power switch on the ac adaptor.
❸ Make the necessary adjustments on the camera. See the instruction manual furnished with the camera.

❹ Slide the RECORD switch to the right. Recording will begin.
- To stop recording momentarily, press the II PAUSE buttion on the recorder or on the Remote Commander.

To resume recording, press II button again.
The tape run/stop button of your camera **will not** function with this recorder.

To stop the recording process completely, press the ■ button.

To view the picture being recorded on the TV screen

❶ Turn the connected TV on.
❷ Select the channel for the video recorder on the TV.
❸ Press the PROGRAM SELECT button so that the VTR lamp lights up.
The picture being recorded will appear on the TV screen.

- Acoustic feedback (a whistle-like sound) may be heard during recording when the microphone built into the camera and the speaker of the TV set interact. If this occurs, turn the camera away from the TV or turn down the TV volume.

Caution

The Remote jack is for the connection of the Remote Commander. **Do not** insert the CAMERA REMOTE plug of the HVA-220 ac power adaptor here. This will lead to improper operation of the set.

1-13. CLOSED CAPTION RECORDING AND PLAYBACK

This video cassette recorder has the capability of recording and playing back closed caption television programs for the hearing-impaired, when connected to a decoder unit or TV receiver designed to receive closed caption signals.
To play back, the CAPTIONS/PCM switch located at the rear of the recorder must be set to the left position.
Connection between the recorder and the decoder unit will depend on the unit you purchase. See the instruction manual supplied with the decoder.

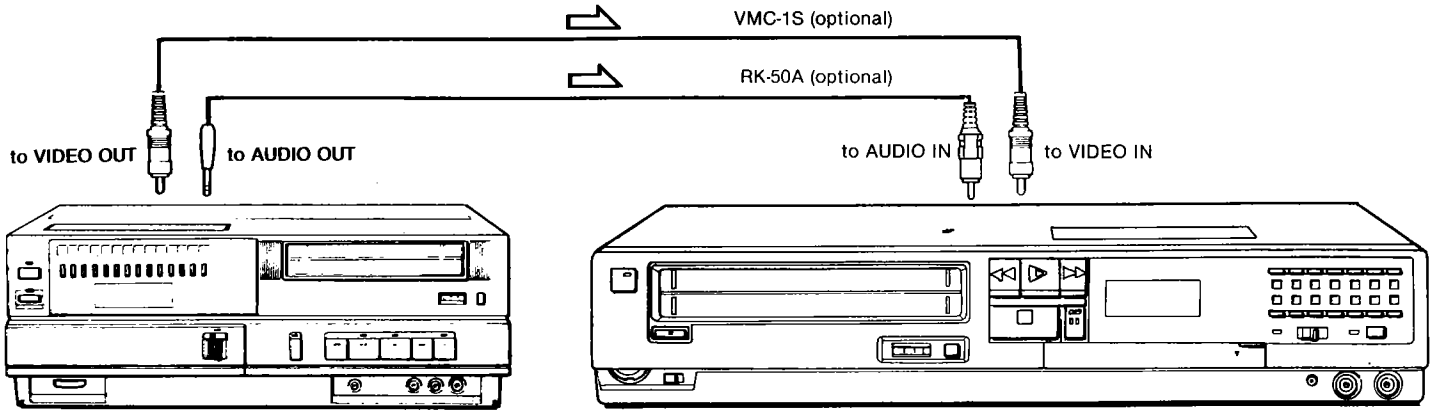
1-14. COPYING TAPES

CAUTION
Television programs, films, video tapes and other materials may be copyrighted. Unauthorized duplication of such material may be contrary to the provisions of the copyright laws.

To duplicate a tape you will need two video recorders; one is to play back the original tape and the other is to duplicate.

1-15. PCM RECORDING AND PLAYBACK

By connecting a PCM digital audio processor (Sony PCM-F1, etc.) you can enjoy hi-fi sound reproduction with a wide dynamic range, minimal distortion and a flat frequency response.
To play back, the CAPTIONS/PCM switch at the rear of the recorder must be set to the left position.
Connection between the recorder and the PCM digital audio processor will depend on the unit used. Follow the instruction manual of the digital audio processor.



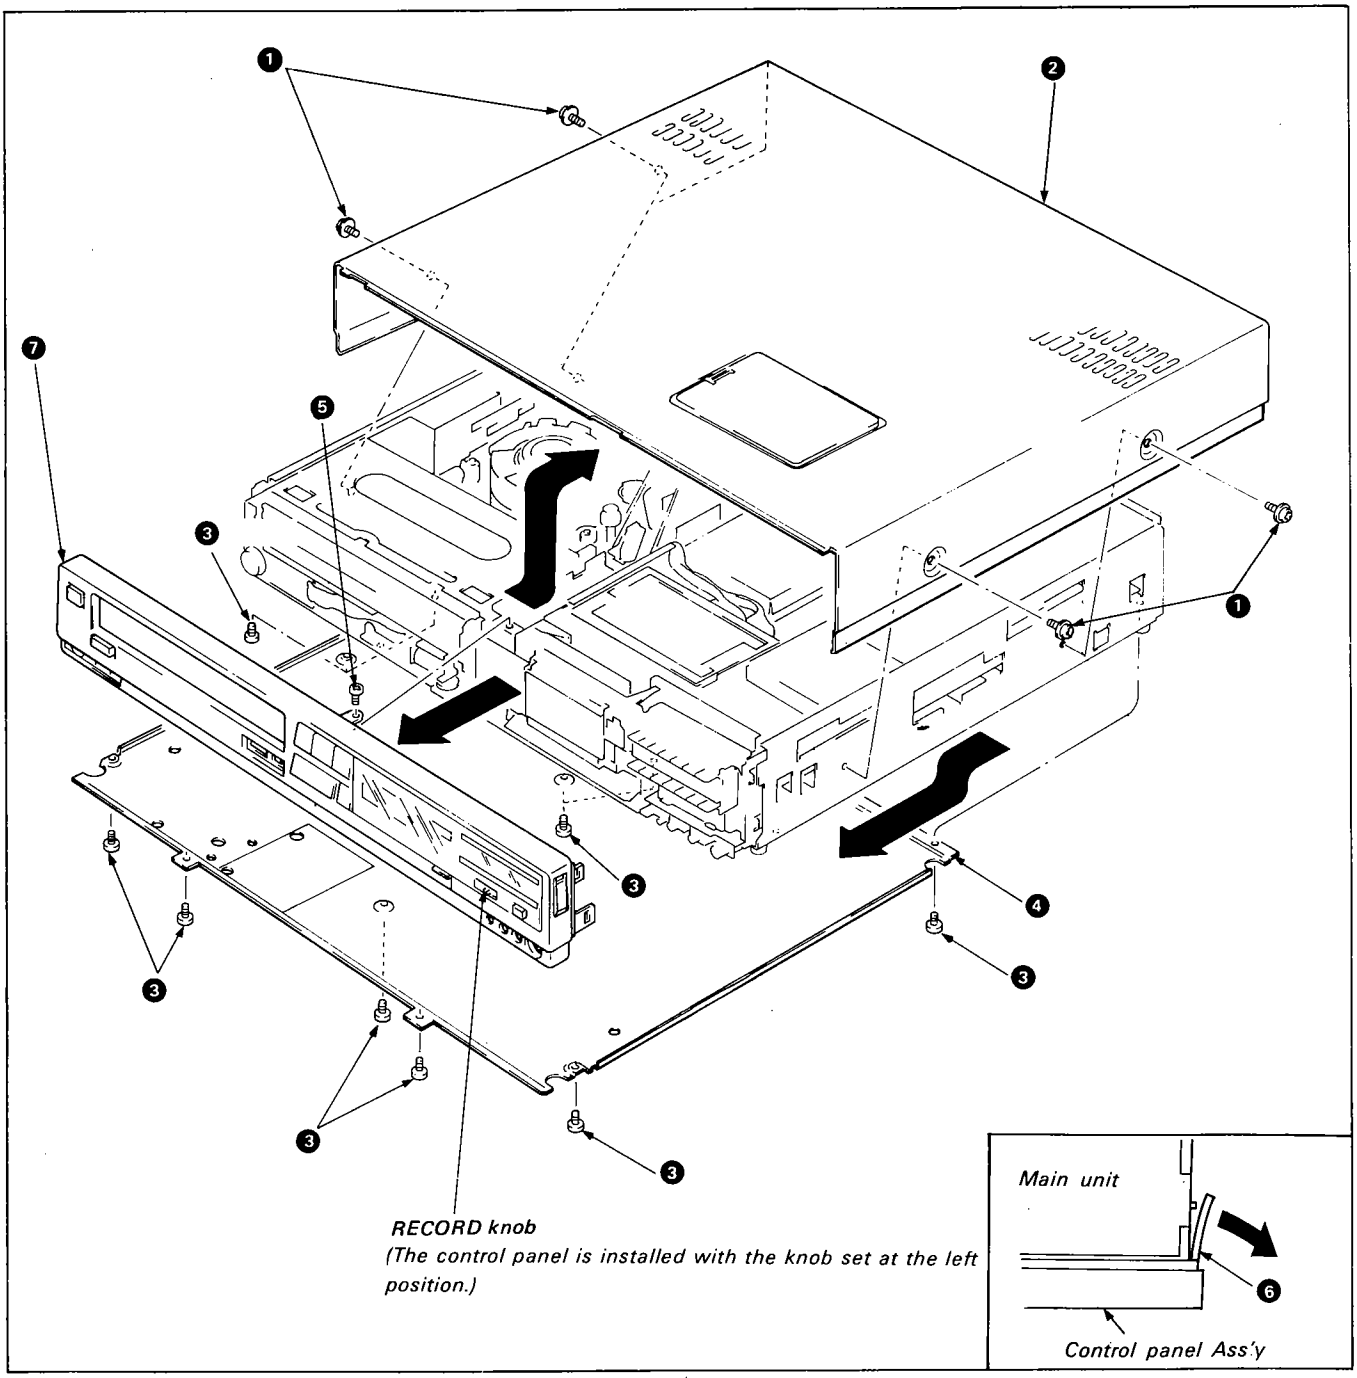
Recorder for playback

Recorder for duplicating

1-16. DISASSEMBLY

1-16-1. Removal of Cabinet

❶ Remove the four case set screws.
❷ Remove the upper case in the direction indicated by the arrow.
❸ Remove the ten screws (BVTT2.6×8).
❹ Remove the lower case.
❺ Remove the screw (BVTT2.6×8).
❻ Remove the protrutions of control panel Ass'y from the main unit.
❼ Remove the control panel Ass'y in the direction indicate by the arrow.



1-16-2. Assembly of Timer Door Ass'y

❶ As shown in Fig. 1, insert the springs into the protrusions of the timer door Ass'y.
❷ Insert the timer door Ass'y into portion A and mount it on the front panel.
❸ Intrude the timer door Ass'y in the direction indicated by the arrow, as shown in Fig. 2.
❹ Intrude the springs.

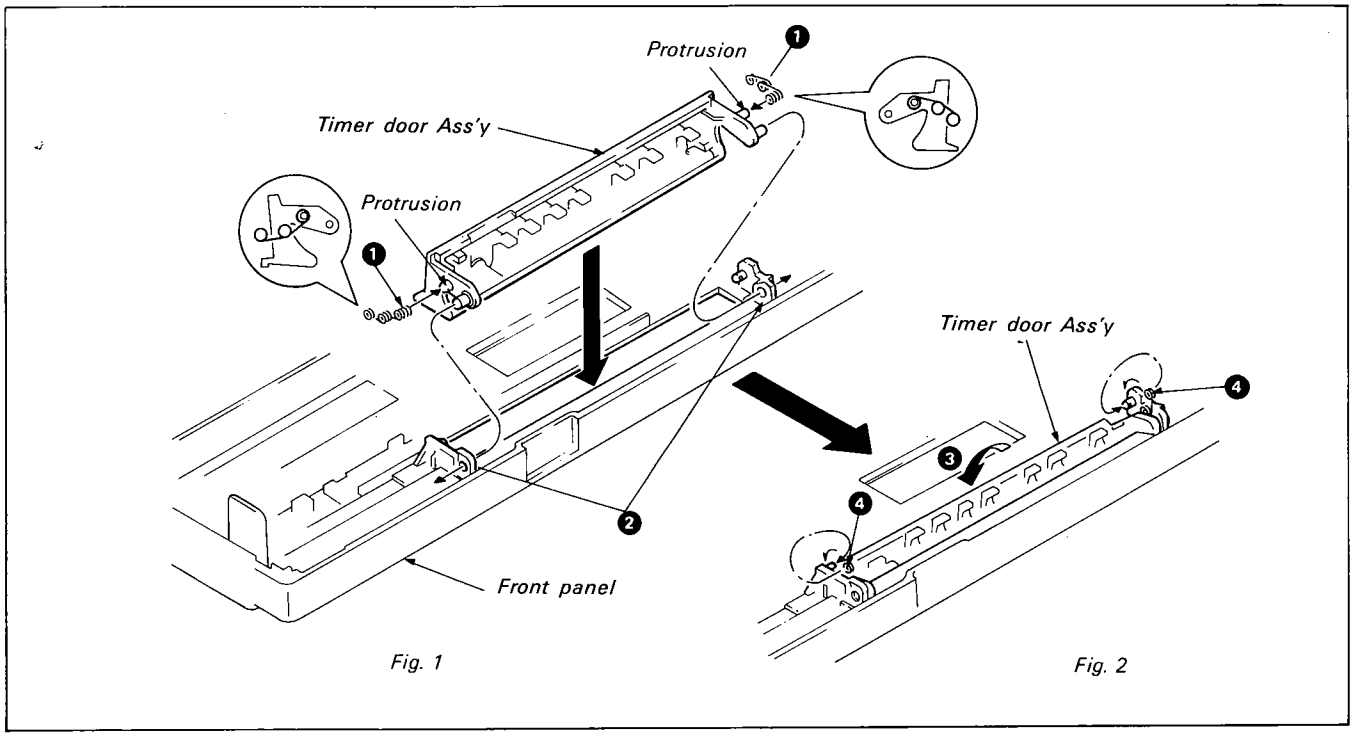


Fig. 1

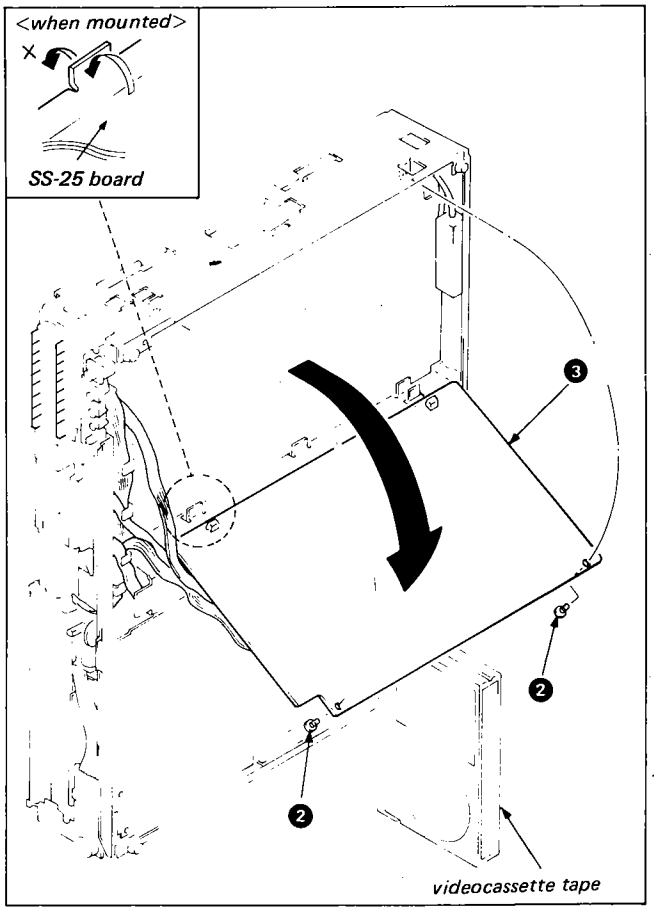
Fig. 2

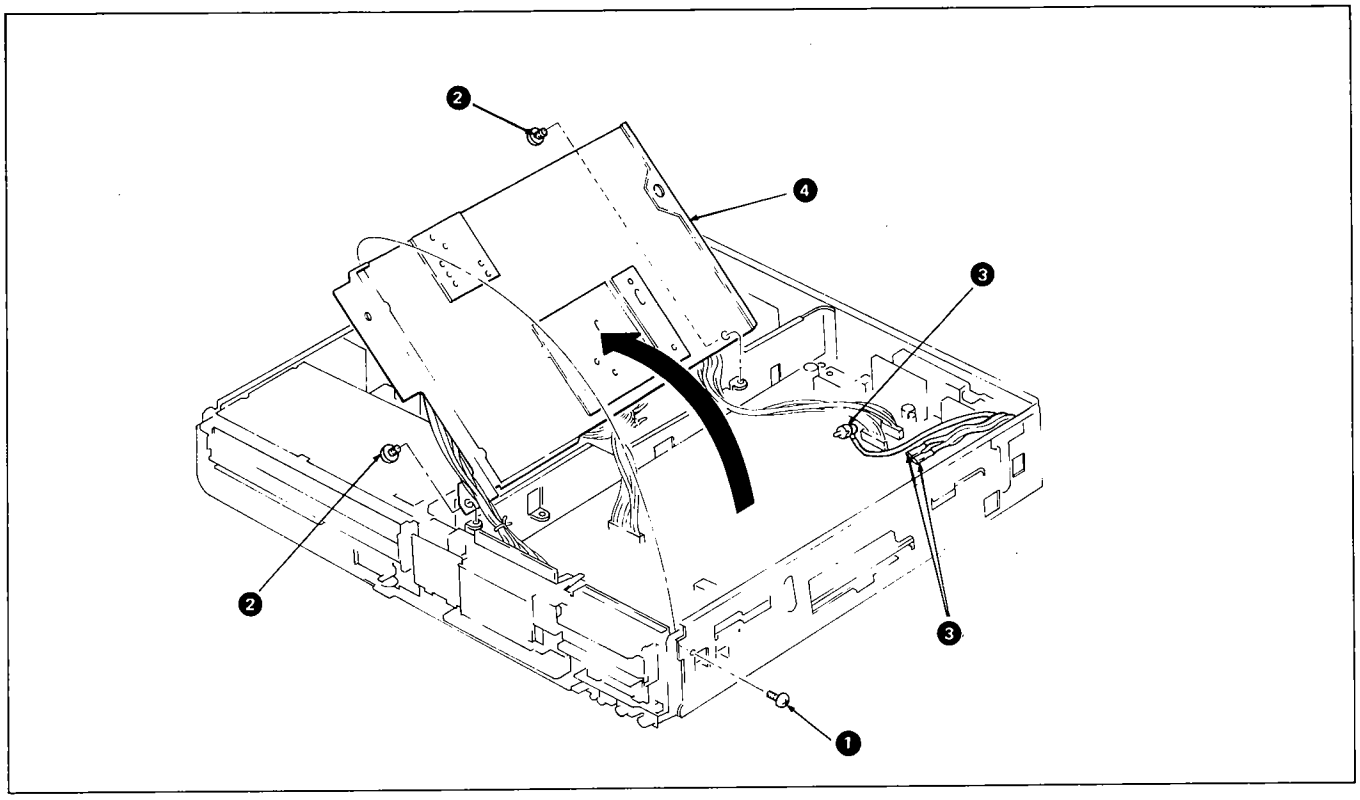
1-16-3. Removal of SS-25 Board

❶ Place the main unit with a left side panel on the bottom.
❷ Remove the two screws (BVTT2.6×6).
❸ Remove the SS-25 board. (Supported using a videocassette tape.)



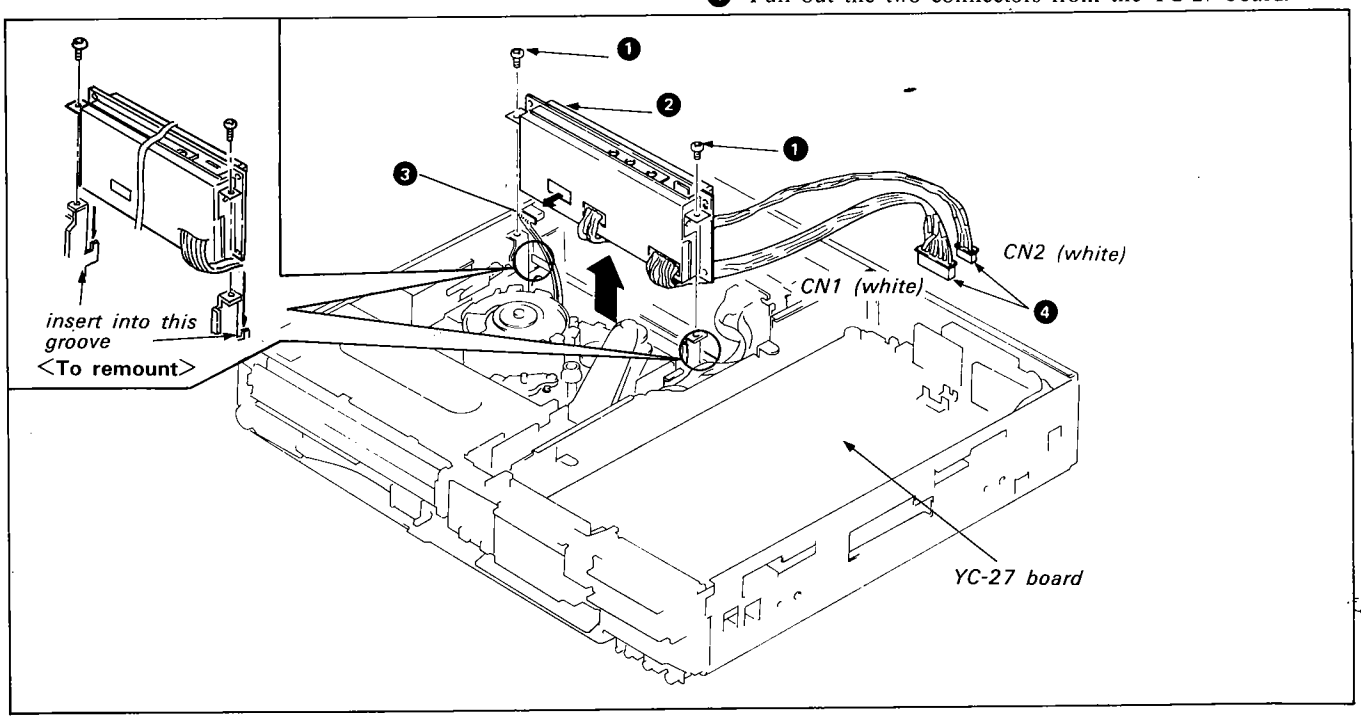
1-16-4. Removal of TA-20 Board

❶ Remove the screw (BVTT2.6×6).
❷ Remove the two screws (BVTT2.6×6).
❸ Pull out the pin cable and two connectors.
❹ Remove the TA-20 board.



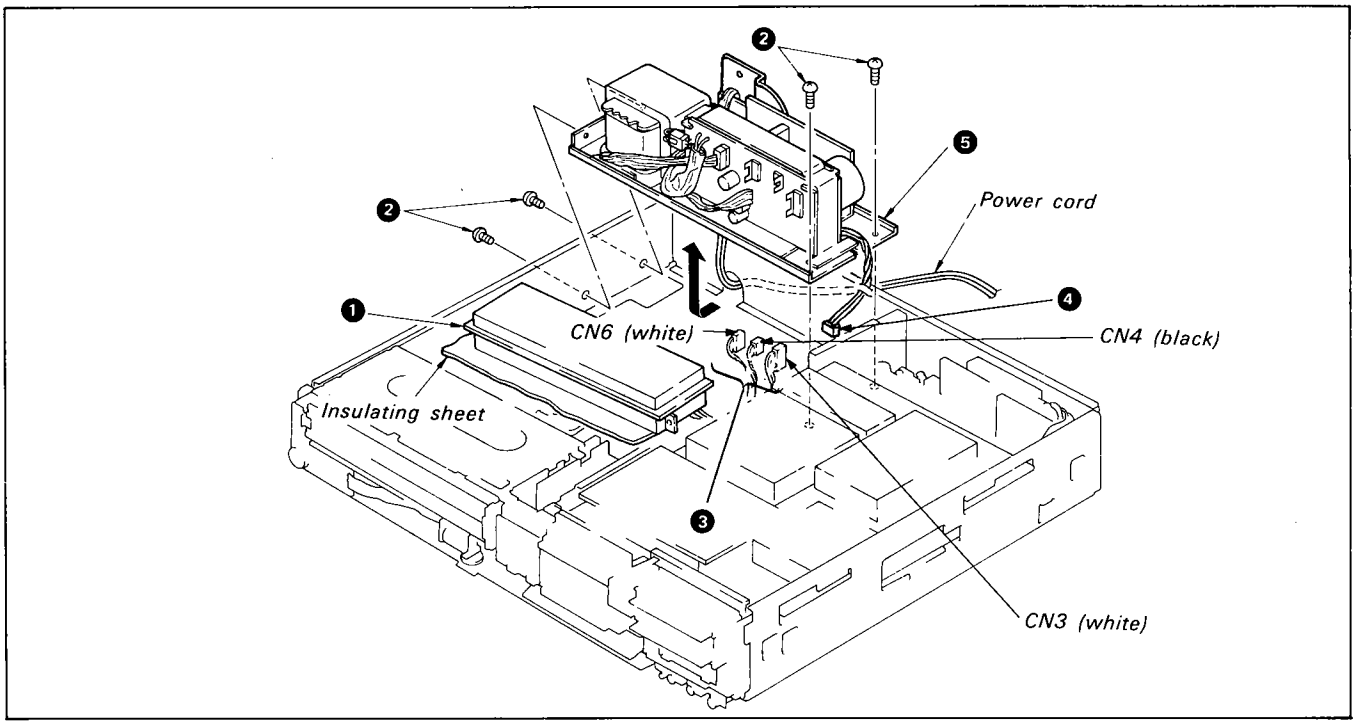
1-16-5. Removal of RP-8 Board

❶ Remove the two screws (BVTT2.6×6).
❷ Remove the RP-8 board block.
❸ Pull out the connector CN1 (black).
❹ Pull out the two connectors from the YC-27 board.



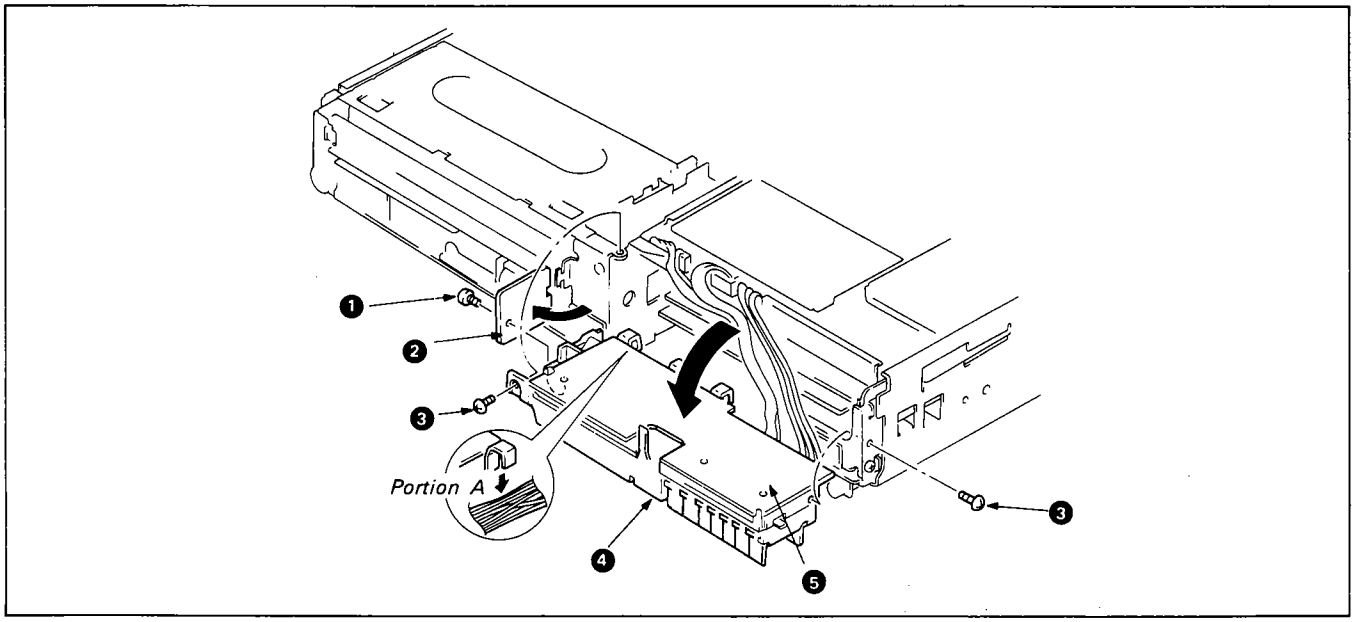
1-16-6. Removal of Power Block (PS-34, PS-35)

❶ Remove the RP-8 board block.
(Refer to 1-16-5. Removal of RP-8 Board)
❷ Remove the four screws (BVTT2.6×6).
❸ Pull out the three connectors
❹ Pull out the connector CN10 (white) from the SS-25 board.
❺ Remove the power block.



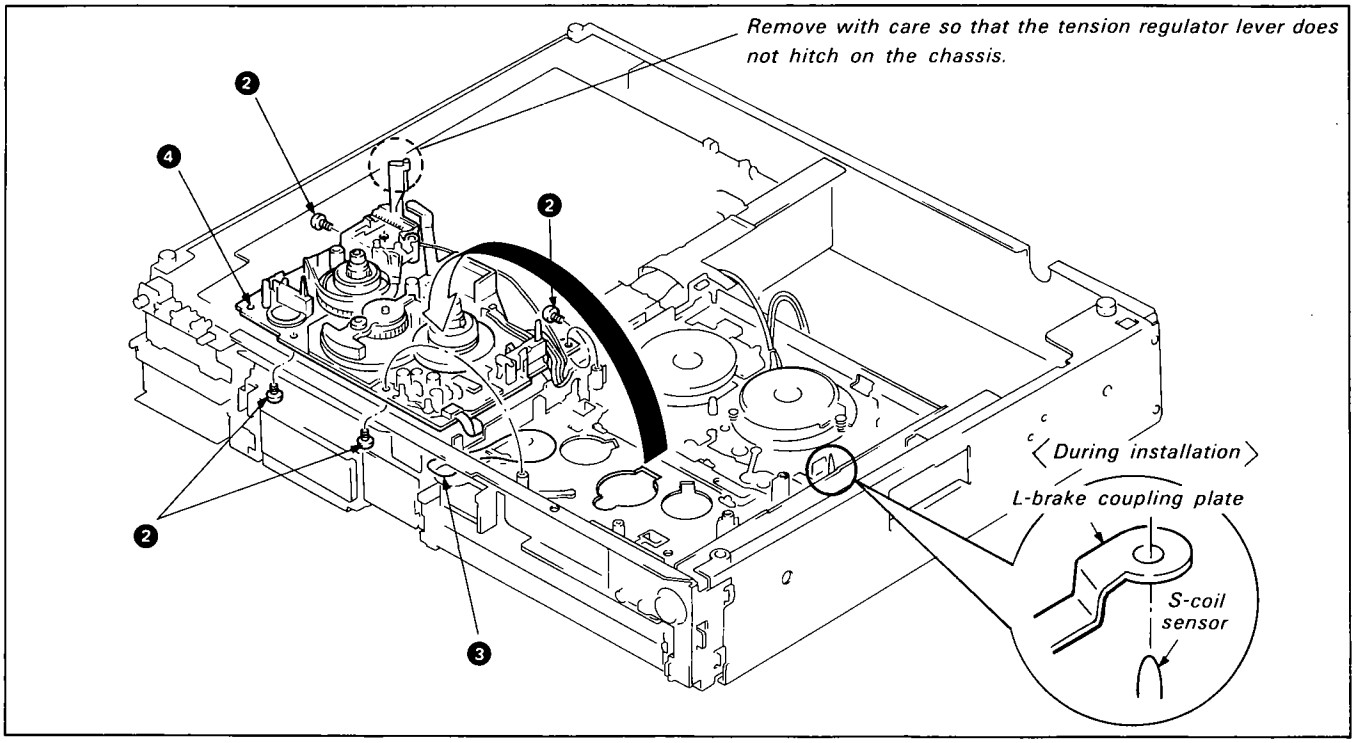
1-16-7. Removal of TS-23 Board

❶ Remove the screw (PTP2.6×8).
❷ Remove the FS-34 board.
❸ Remove the two screws (BVTT2.6×6).
❹ Lay the timer frame block in the direction indicated by the arrow. (Performed after removal of three lead wires at portion A.)
❺ Remove the TS-23 board.



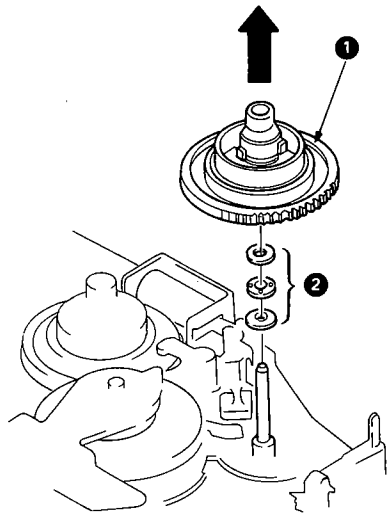
1-16-8. Removal of Reel Ass'y

❶ Turn the upper panel upside down.
❷ Remove the four screws (tapping B2.6×8).
❸ Remove the counter belt.
❹ Remove the reel Ass'y.

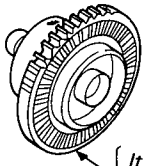


1-16-9. Removal of Take-Up Reel Table

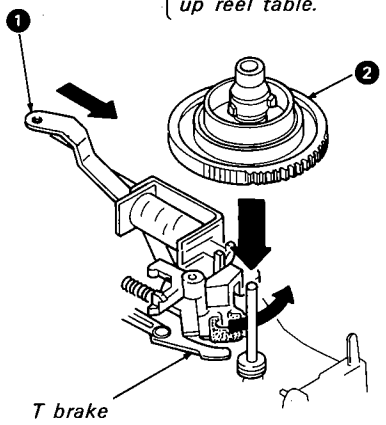
❶ Remove the take-up reel table.
❷ Remove the thrust bearing and two washers.



<To remount>
1) Intrude the L-brake coupling plate in the direction indicated by the arrow and slide the T-brake. (❶).
2) Insert the take-up reel table. (❷).

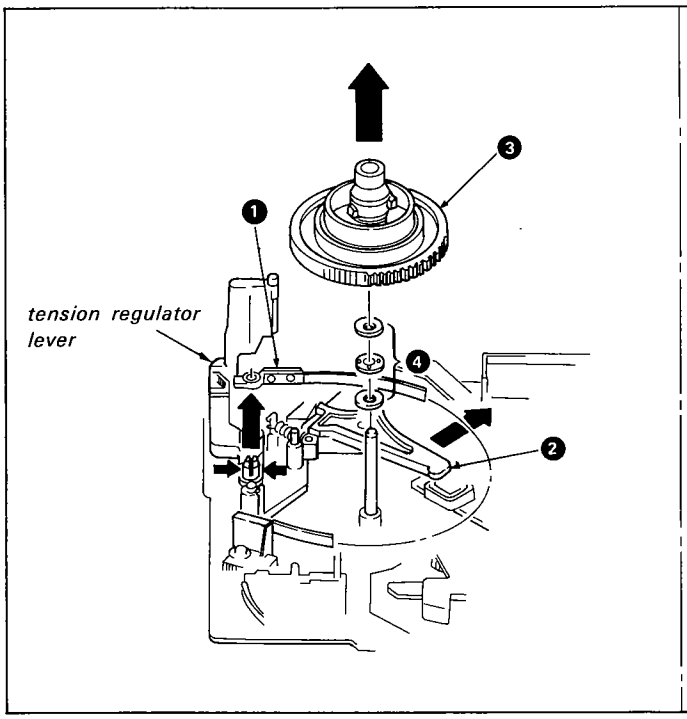


It should be noticed not to damage a reflecting foil on the bottom of the take-up reel table.



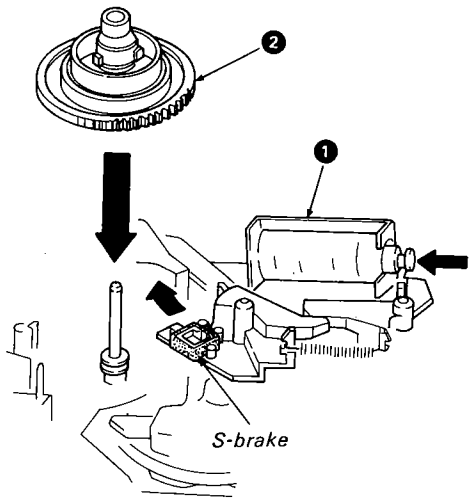
1-16-10. Removal of Supply Reel Table

❶ Remove a tension regulator band from the tension regulator lever.
❷ Move the soft brake lever.
❸ Remove the supply reel table.
❹ Remove the thrust bearing and two washers.



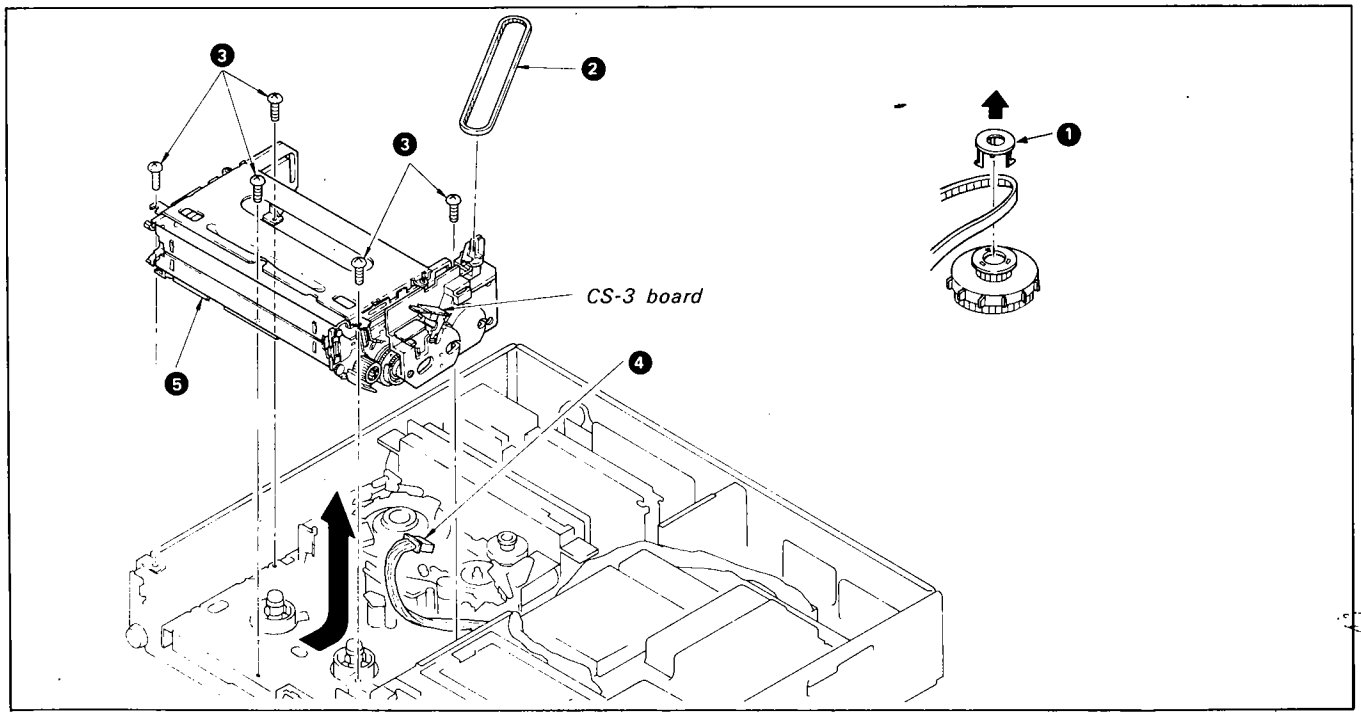
<To remount>

1) Intrude the brake plunger in the direction indicated by the arrow and slide the S-brake. (❶).
2) Insert the supply reel table. (❷).



1-16-11. Removal of FL Cassette Compartment Ass'y

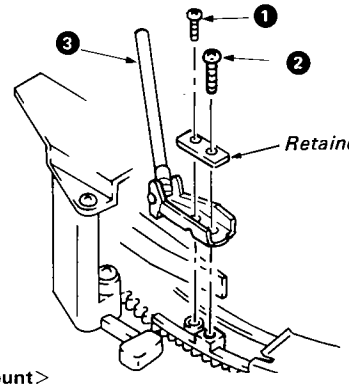
❶ Remove the internal gear flange.
❷ Remove the synchro belt.
❸ Remove the five screws (BVTT2.6×6).
❹ Pull out the connector CN301 (white).
❺ Remove the FL cassette compartment Ass'y in the direction indicated by the arrow.



1-16-12. Removal of the No.2 and No.3 Guides

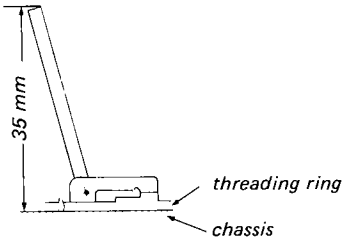
Removal of the No. 2 Guide

❶ Remove the 1×3 tap-in screw.
❷ Remove the 1.4×3 tap-in screw.
❸ Remove the No. 2 guide assembly.



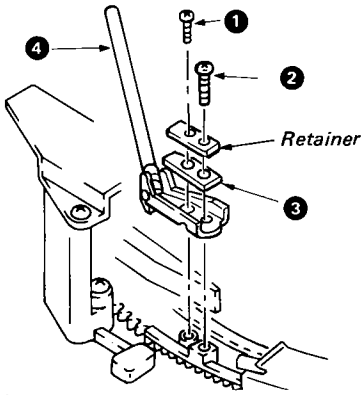
<To remount>

1) Loosely tighten the 1 x 3 tap-in screw.
2) Tighten the 1.4 x 3 tap-in screw all the way.
3) Adjust the 1 x 3 tap-in screw until the height is 35 mm. After adjustment, lock the screw.
Note: The no. 2 guide is up all the way.



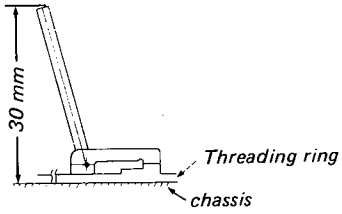
Removal of the No. 3 Guide

❶ Remove the 1×3 tap-in screw.
❷ Remove the 1.4×3.5 tap-in screw.
❸ Remove the limiter spring.
❹ Remove the No. 3 guide assembly.



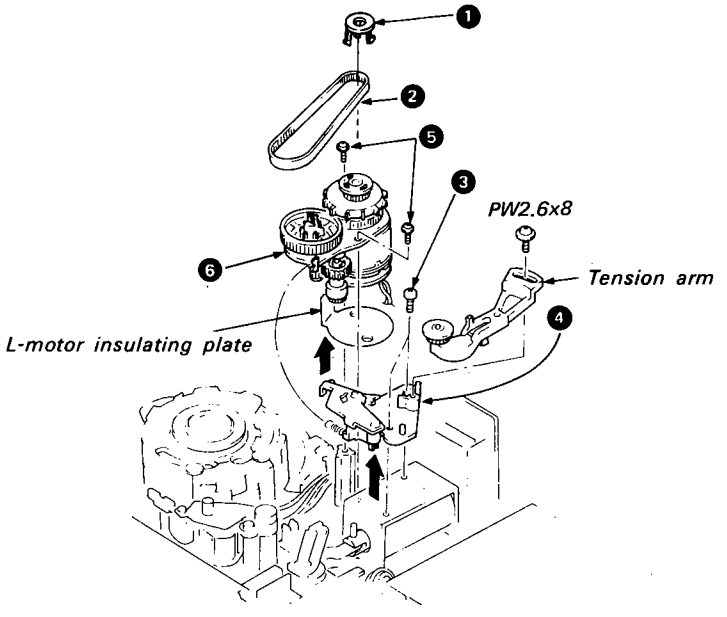
<To remount>

1) Loosely tighten the 1 x 3 tap-in screw.
2) Tighten the 1.4 x 3.5 tap-in screw all the way.
3) Adjust the 1 x 3 tap-in screw so that the height is 30 mm. After adjustment, lock the screw.
Note: The no. 3 guide is up all the way.

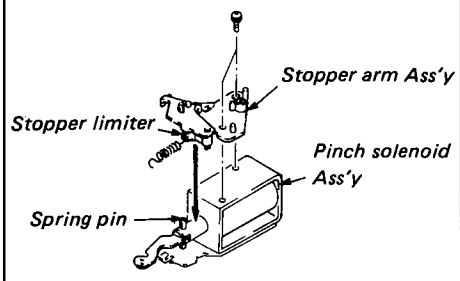


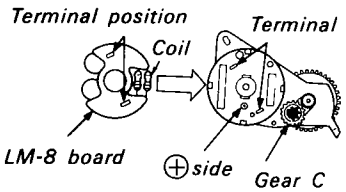
1-16-13. Removal of Loading and Threading Motor (M904)

❶ Remove the internal gear flange.
❷ Remove the synchro belt.
❸ Remove the two screws (small 2.6).
❹ Remove the stopper arm block.
❺ Remove the two screws (PTPWH 2).
❻ Remove the loading and threading motor block.



<When mounting the stopper arm Ass'y>

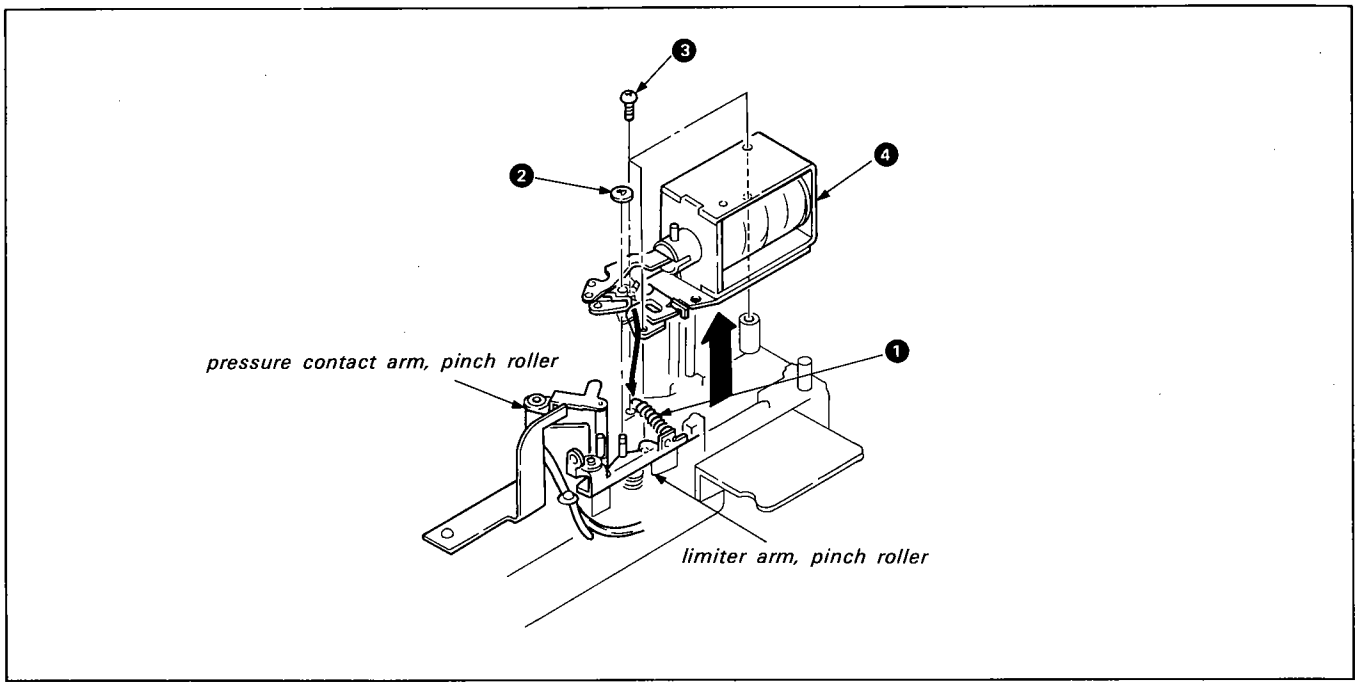




< LM-8 board mounting >

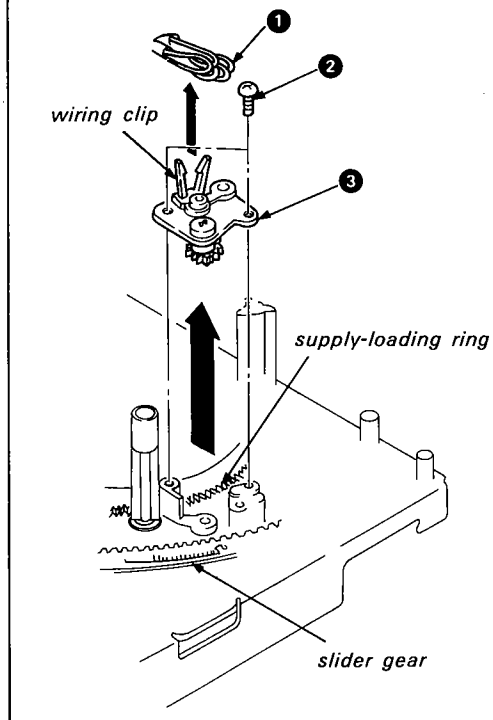
1-16-14. Removal of Pinch Roller Plunger

❶ Remove the spring.
❷ Remove the washer (1.5).
❸ Remove the three screws (PTP2×8).
❹ Remove the pinch roller plunger (PM901).

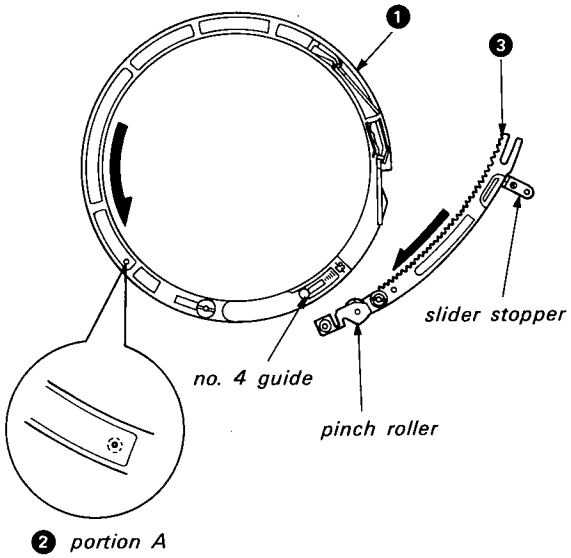


1-16-15. Removal of Drive Gear

❶ Remove a lead wire from the wiring clip.
❷ Remove the two screws (PTP2.6×8).
❸ Remove the drive gear assembly.



<To remount>
1) *Turn the supply-loading ring in the direction indicated by the arrow.(❶).*
2) *Align the hole (portion A) of the supply-loading ring with that of the lower chassis. (❷).*
3) *Move the slider gear fully in the direction indicated by the arrow. (❸).*
4) *Mount the drive gear assembly.*



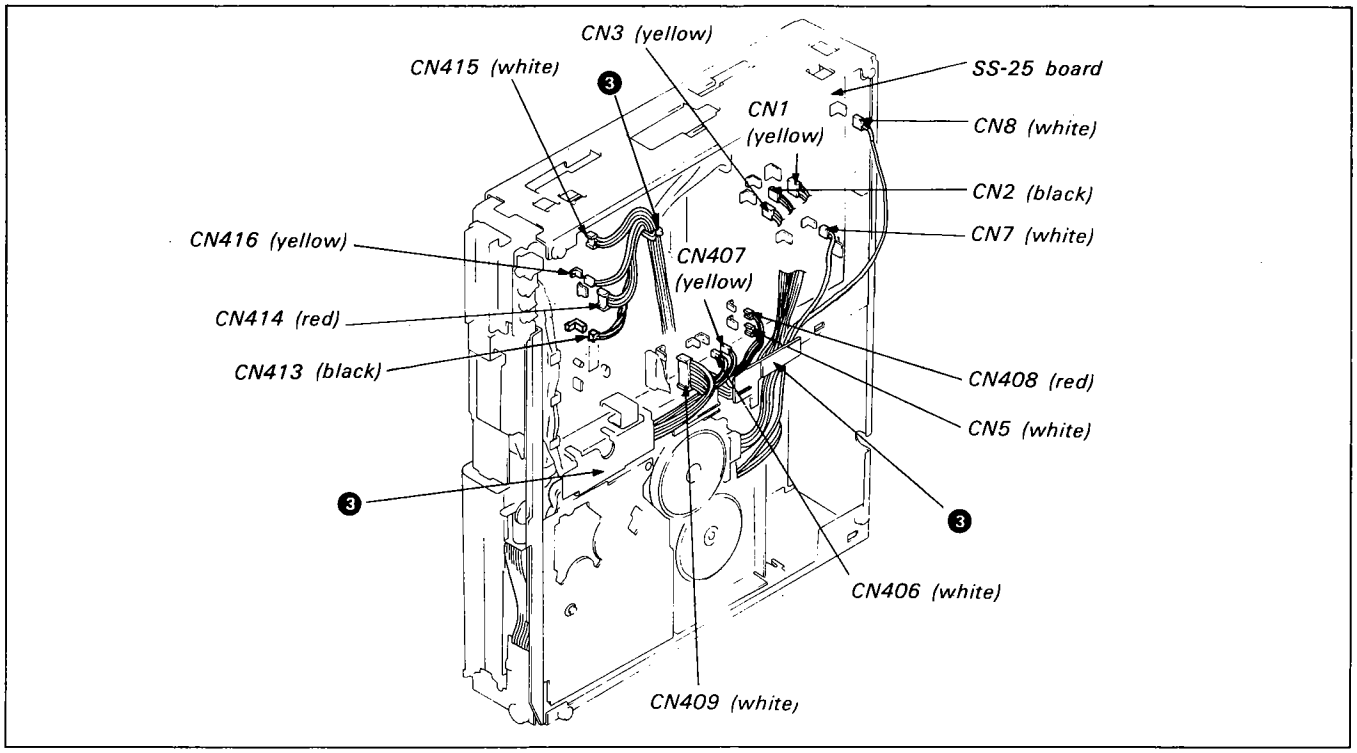
1-16-16. Removal of Mechanical Chassis Block

(1)

❶ Place the main unit with a left side panel on the bottom.

❷ Disconnect the connector from SS-25 board.

❸ Remove the connector, and then remove the lead wires from the cable stopper or harness stopper.



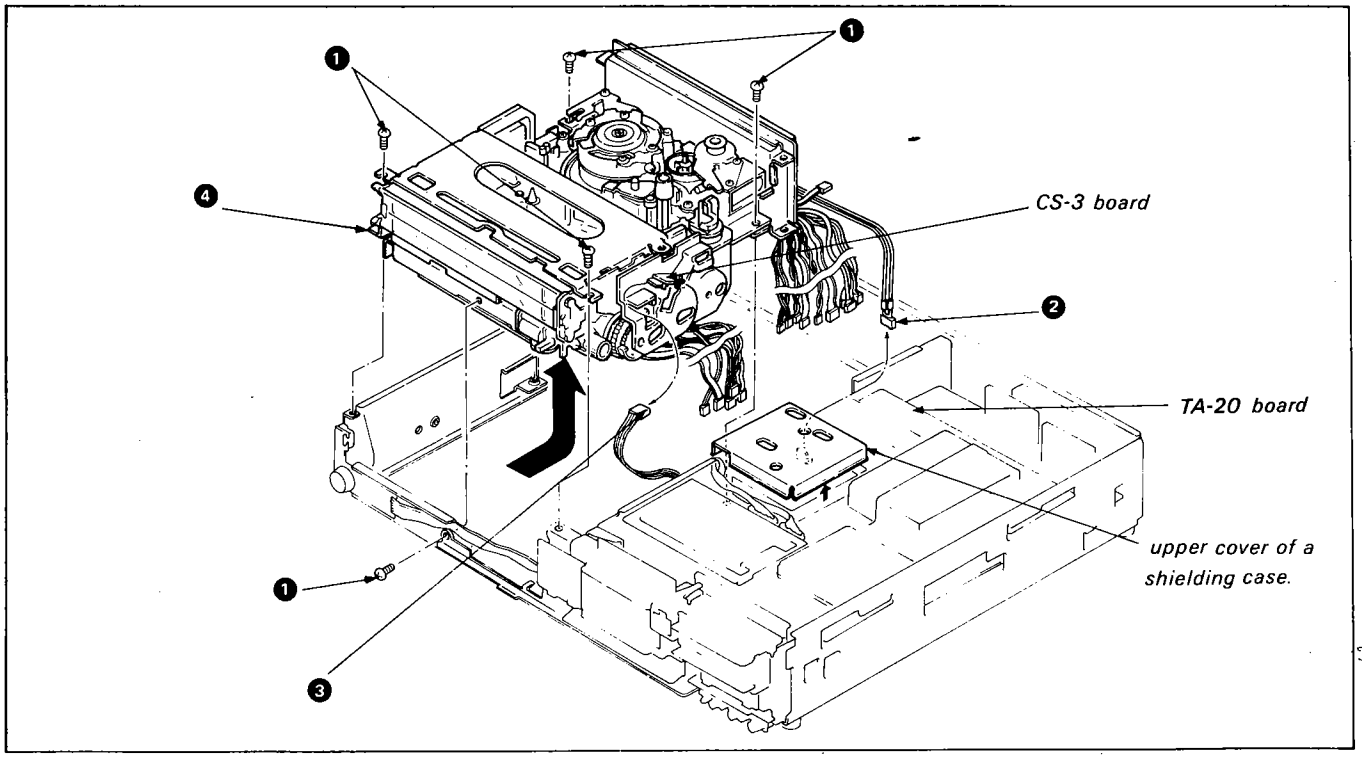
(2)

❶ Remove the five screws (BVTT2.6×6).

❷ Remove the upper cover of a shielding case on the TA-20 board and pull out the connector CN504 (white).

❸ Disconnect the connector CN301 (white) from CS-3 board.

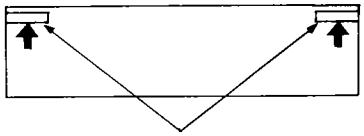
❹ Pull out the mechanical chassis block in the direction indicated by the arrow.



1-17. HOW TO OPERATE TRANSPORT WITHOUT CASSETTE

1) After pulling up two mis-setting protection levers, push and slide the cassette container. Then, the loading motor starts revolving and the cassette container is automatically set.

(Side panel to be inserted, in cassette compartment)



Push it up in the direction of the arrow to release the cassette-in proof lever.

2) When the cassette container is set in position after going down, push the cassette-in switch. Threading then starts.
Note:
Unless the cassette-in switch is pushed within about 5 seconds after the cassette container goes down, the cassette container is unloaded returning to the home position.
Note:
When the cassette-in switch is pushed before the cassette container goes down, threading starts immediately.

3) Operation is allowed in the above condition.
(For operation in the record mode, set the recording switch to ON while pressing the mis-erasing protection switch. Unless the mis-erasing protection switch is pressed, ejection may occur.)
For feeding power to the transport immediately after cutting power while threading is being completed, set the power switch to ON while pressing the cassette-in switch. Unless the cassette-in switch is pressed, ejection may occur when the power switch is set to ON.

1-18. OPERATION OF THE UNIT WITH THE FL CASSETTE COMPARTMENT REMOVED

1-18-1. How to Put the Unit into Threading Completed Mode when the FL Cassette Compartment is Removed

❶ Connect jumper wires to short pin 1 of the CN301 connector on circuit board CS-3 to pin 2, and pin 3 to pin 4.
Note:
Be careful that the jumper wires do not touch any other parts (use tape or other insulation).

❷ Press the cassette-in switch and leave it pressed in. When the power button is turned ON, threading starts.
* Refer to section 3-6 for instructions on how to remove the FL cassette compartment.

[How to EJECT in this condition]

- Press the EJECT button. When unthreading is completed and the internal gear starts to turn, turn the power OFF.

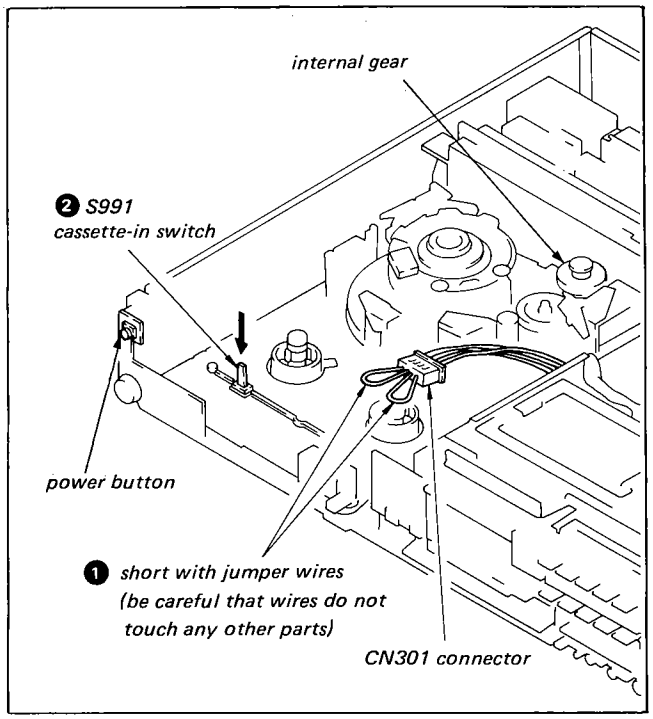


Fig. 1-6. How to thread the tape when the FL cassette compartment has been removed

1-18-2. Playback Without Cassette Installed

Complete threading by the procedure described in 1-6-1, then press the playback button.

1-18-3. How to Put in Recording Mode Without Cassette Installed

1. Thread by the procedure in 1-6-1, then press the recored proof switch shown in Fig. 1-7.
2. With the accidental erasure prevention switch pressed down, press the recording button.

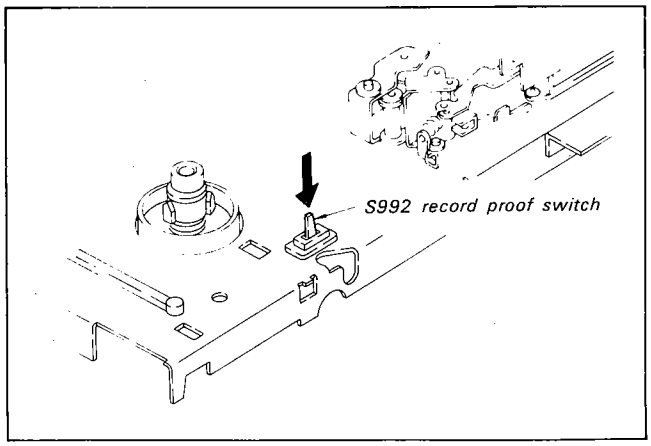

Fig. 1-7. How to put the recorder in recording mode with the FL cassette compartment removed

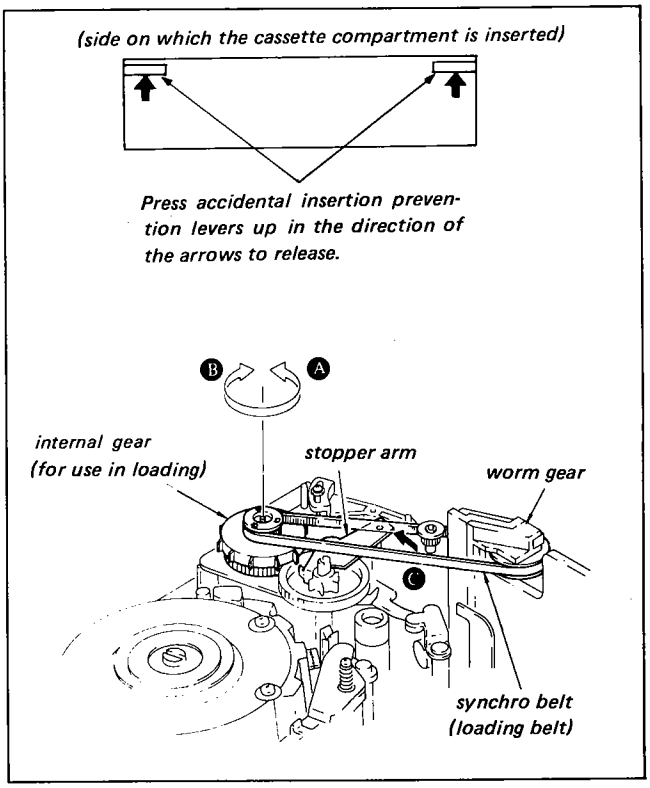
1-19. HOW TO LOAD, THREAD, UNLOAD AND UNTHREAD WITH THE POWER OFF

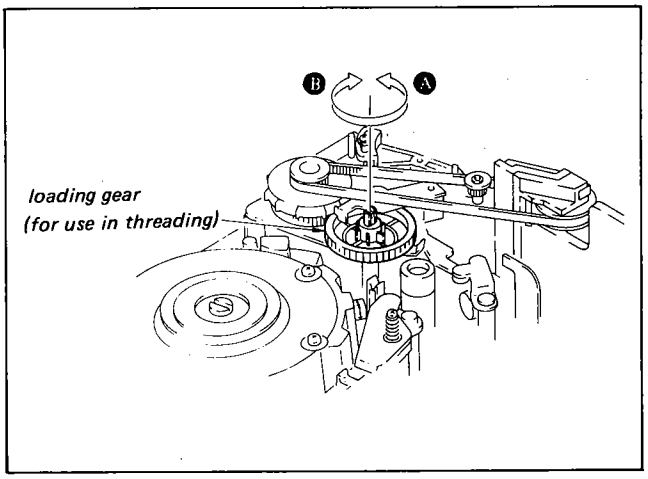
1-19-1. Manual Loading and Unloading



1) Release the right and left accidental insertion prevention levers inside the cassette compartment, then press the stopper arm in the direction of arrow Ⓒ and release the internal gear stop.
2) Turn the internal gear manually in the direction of arrow Ⓐ until loading is completed.
3) To unload, turn the internal gear in the direction of arrow Ⓑ.

Note:
When the loading belt has been removed, load and unload by turning the worm gear manually.

1-19-2. Manual Threading and Unthreading



1) Turn the loading gear in the direction of arrow Ⓐ until loading is completed.
2) To unthread, turn the loading gear in the direction of arrow Ⓑ.

Note:
Always turn the loading gear sideways by hand. Never use a screwdriver or other tool.

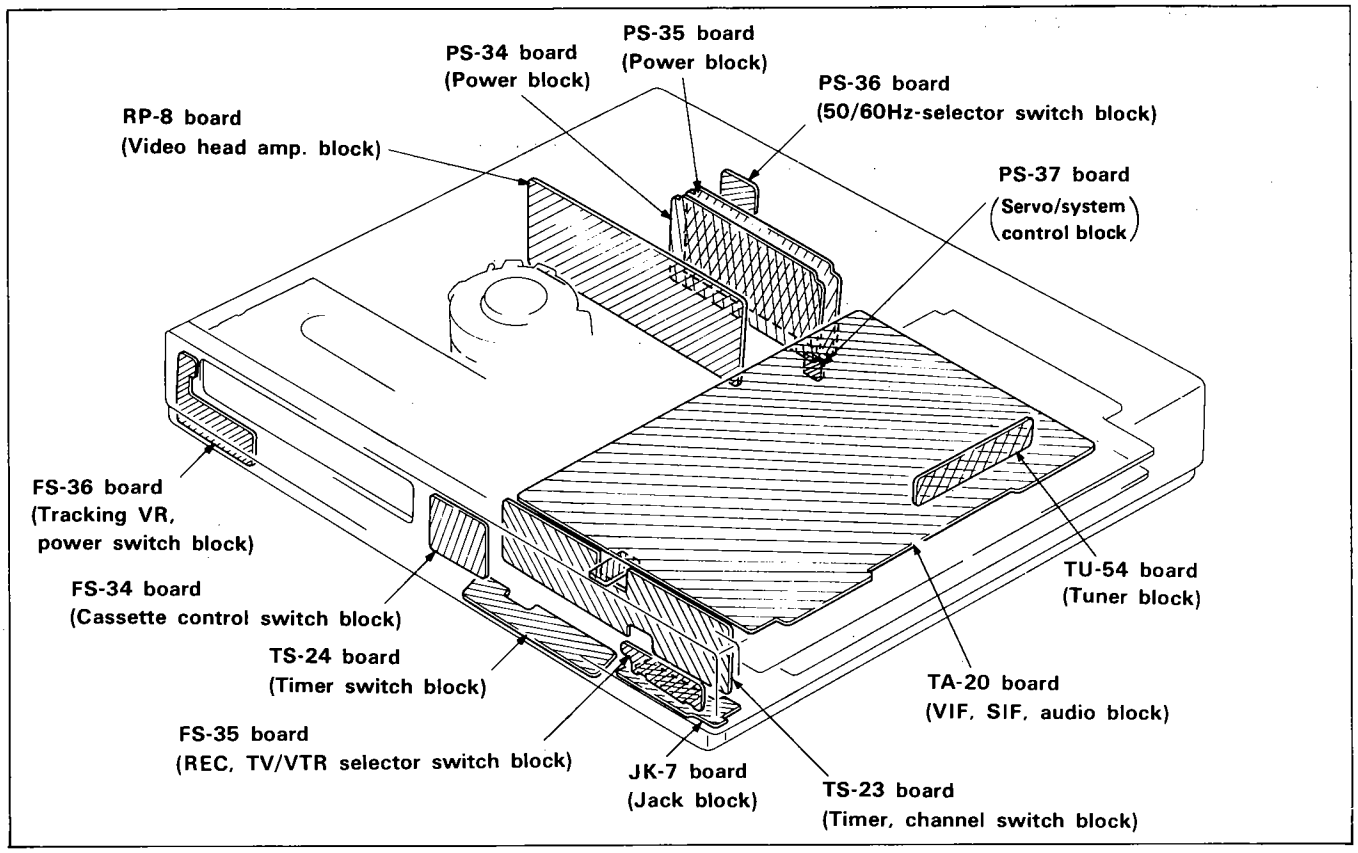
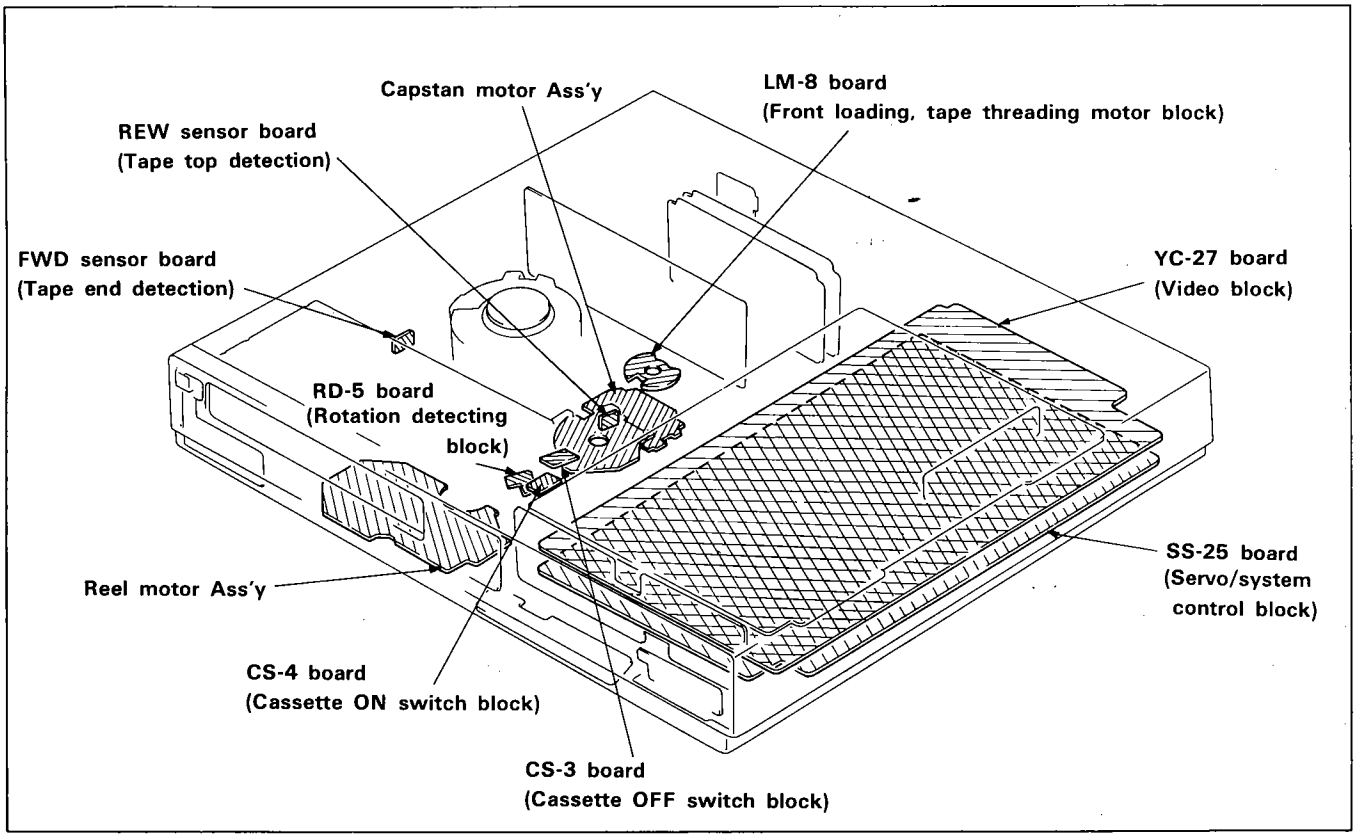
1-21. BOARD ARRANGEMENT





1-22. CONFIGURATION OF MAIN BOARDS AND APPLICATION OF ICs

- **Main boards**

Board	Application
TA-20	Tuner and tuner control circuit. VIF, SIF, AGC and AFT circuits. Audio REC/PB circuit.
YC-27	Luminance and color signal REC/PB processing circuit. RF modulator.
RP-8	Low-band conversion color signal and luminance- FM signal. REC/PB circuit.
SS-25	System control circuit. Servo control circuit. FWD and REW sensor circuits. Driving circuit for drum motor, capstan motor, reel motor and loading motor. Driving circuit for pinch roller plunger solenoid, brake plunger and solenoid. Remote control circuit.
FS-34, FS-35, FS-36	Function switch. Mode display.
TS-23	Clock/timer circuit. Channel switch.
TS-24	Clock/timer switch. REC switch.
PS-34, PS-35	DC stabilizing power circuit. Power control circuit. Timer power circuit.
PS-36	Timer selector switch.
JK-7	VIDEO IN jack, AUDIO IN jack, REMOTE CONTROL jack

lication of ICs

Board	Name	Application
TA-20		
IC001	CX-885B	VIF. SIF. AFT and AGC circuits.
IC002	μPC574J	33V REGULATOR
IC501	LA7046	Audio REC/PB circuit.
YC-27		
IC1	CX-196	Color SYNC circuit.
IC2	CX-822	0.5H-jumping detection and compensation circuits.
		False-vertical SYNC signal inserting circuit.
IC3	CX-188	Color processing circuit.
IC4	CX-187	Luminance processing circuit.
		Luminance and color signal mixing circuit.
IC5	CX-135	Noise canceler II (luminance).
RP-8		
IC1	CX-862	Video REC/PB circuit.
IC2	CX-134A	RF switcher and drop-out compensating circuit.
SS-25		
IC1	CX-194B	Drum and capstan servo circuits.
IC2	μPC358C	CTL signal amp.
IC3	μPC4558C	FG signal amp.
IC4	TC4053BP	Capstan speed selecting and drum phase selecting (fH). in
		βI. II and III modes.
IC5	μPC324C	Capstan servo amp.
IC6	μPC324C	Drum servo amp.
IC301	M32091SL	Remote control circuit.
IC401	μPD553C-276	System control circuit (input).
IC402	μPD553C-287	System control circuit (output).
IC404	LA7205	Tape end/top detect.
IC302	μPC4558C	Remote control signal comparator.
IC303	TC4069BP	Remote control signal inverter.
TS-23		
IC201	LR3466	Clock/timer control circuit.
PS-35		
IC101	STR-9012	Constant voltage/power control.

	Output	Capstan speed servo output		Input	Capstan speed changing-over input	H: βI L: βII, βIII
	Input	Capstan speed changing-over input	L: βI H: βII, βIII
	Output	Not used.	
3	Input	3.58 MHz-signal input from crystal oscillation. During PB, the input is a reference signal (INT VD) of the drum phase servo by counting down the 3.58 MHz-signal.	9		Connected to GND	
0		Connected to B + power supply	
	Input	Drum speed PG (A) time constant	2	Input	PG(A) signal input from rotation of a drum	
3	Input	PG(S) signal input from rotation of a drum During REC and PB, the input is a drum speed servo signal.	4	Output	Drum speed servo output	5		Connected to GND.	
6	Input	Reset input A pulse is input when the power switch is turned "ON".	: During power ON 5Vp-p
7	Output	Drum phase servo output	PWM wave 5Vp-p
8	Output	Not used.	

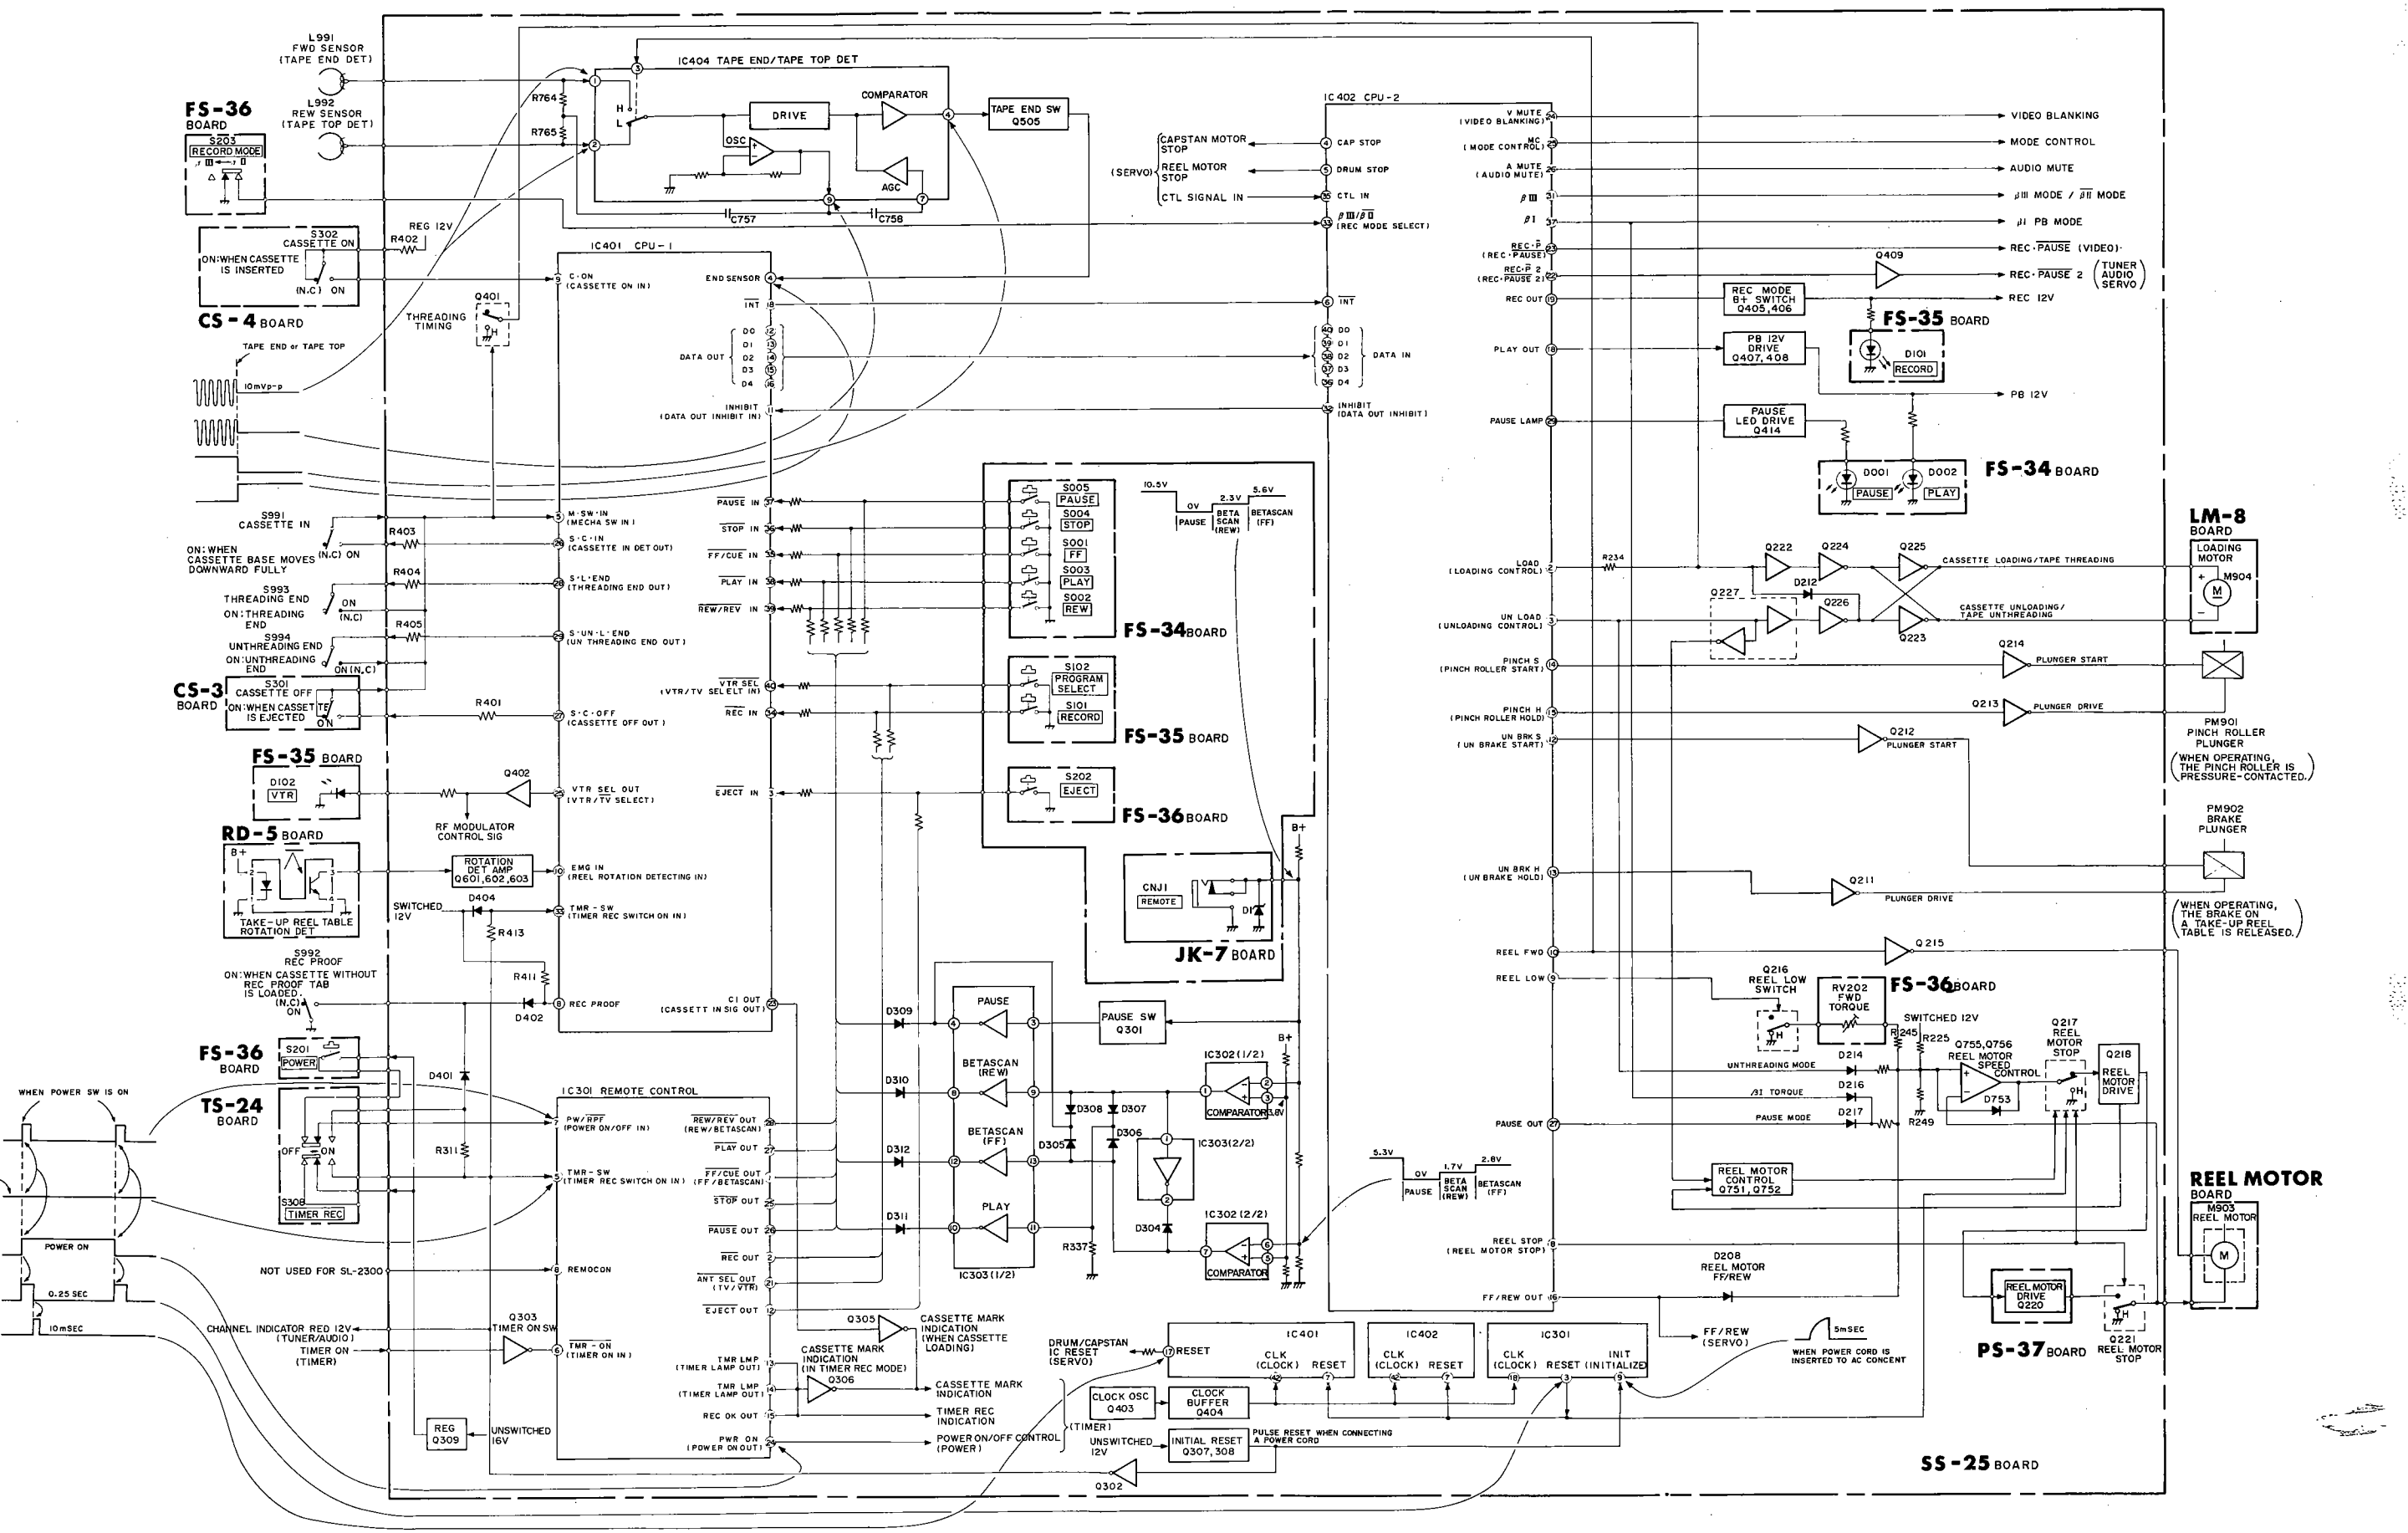
39	Output	RF switching pulse output	40	Input	PG(B) signal input from rotation of a drum During REC and PB, the input is a comparison signal of the drum phase servo.	41	Input	Time constant of RF switching pulse position	42	Input	"H" is input in the BETASCAN mode. A AFC circuit inside IC goes high. (f_H deviation compensating) The drum phase output from a 37-pin terminal is controlled by input of a 6-pin terminal.	H: BETASCAN mode

TEM CONTROL BLOCK DIAGRAM (1)



TEM CONTROL BLOCK DIAGRAM (2)

of signal

ation of the system control requires that.

ng power OFF

ower supply is fed to the power terminals (⑲ , ⑳) of a mote control IC (IC301).

clock signal is add to the clock input terminal (⑱) of a mote control IC (IC301).

ne initialized input terminal (⑨) of a remote control IC C301) is "L" in level. (The input terminal is initialized ing a pulse ⎍ during connection of a power code.)

nder the condition described above, power supply, IC401 d IC402 are controlled by the input signal of a remote ntrol IC.

ng power ON

wer supply is fed to the power terminals (⑳ , ㉑) of stem control ICs (IC401, IC402).

clock signal is added to the clock input terminal (㊷) of stem control ICs (IC401, IC402).

e reset input terminal (⑦) of system control ICs (IC401, 402) is "L" in level. (The input terminal is reset using a lse ⎍ through IC301 during power ON.)

e interrupt request input terminal (⑥) of a system ntrol IC (IC402) is high in level and each pressing of an erating switch causes the input of a negative pulse (⊤).

e data transfer inhibiting output terminal (㉜) of a stem control IC (IC402) is low in level and IC401 is in the ta output mode.

nder the condition described above, an interrupt request pulse and data are fed from IC401 to IC402 according to each input, and then each control output is fed from IC402.

- Data transmission of CPU-1 (IC401) to CPU-2 (IC402)

Mode \ Data	Data input terminal of IC402				
	㊵	㊴	㊳	㊲	㊱

・ **Input/output terminal of system control IC (IC401)**

Terminal No.	Designation	Meaning	I/O	Function and operation	Signal
1	———	———	—	Not used.	
2	———	———	—		
3	$\overline{EJECT}$	Cassette ejecting	Input	Input when a cassette eject button is pressed. Input when a TIMER REC switch is turned "ON" with the cassette without a tab loaded.	⊓
4	END SENS	Tape end	Input	Input at tape end and tape top. Goes "H" to enter the STOP mode at tape end and tape top. Goes "H" to automatically enter the REW mode at tape end during PB or REC (not including the TIMER REC mode).	H: Tape end and tape top.
5	M・SW IN	Mechanical switch	Input	During loading, threading, unloading and unthreading, CPU-1 enters each mode by using a mechanical switch.	⌐ ⊓
6	TEST			Not used.	
7	RESET	Reset	Input	Inputs to initialize CPU-1. A pulse is input every time the power switch is turned ON/OFF.	⊓
8	REC PROOF	Record proof	Input	Goes "H" when the cassette without a tab is loaded. At that time, the cassette is ejected when a REC switch is turned ON.	H: cassette without a tab L: cassette with a tab
9	C・ON	Cassette ON	Input	Cassette ON is input to CPU-1 during insertion of a cassette.	⌐
10	EMG IN	T-reel rotation	Input	EMG IN is input to CPU-1 during rotation of a T-reel (take-up reel) table. Enters the STOP mode when the EMG input goes from "H" to "L" during PB and REC. At that time, no switch except the EJECT switch is put to use.	H: when rotating L: when not rotating
11	INHIBIT	Data output inhibiting	Input	CPU-2 goes "H" during processing of data. At that time, input to inhibit output of the new data from CPU-1.	H: new data output inhibiting
12	D0	Data	Output	Fed to CPU-2, as data, according to input of an operating switch, mechanical switch, tape end, and defect detection.	Parallel data
13	D1	Data	Output		
14	D2	Data	Output		
15	D3	Data	Output		
16	D4	Data	Output		
17	RESET	Reset	Output	A reset pulse is output to reset the servo IC (IC1) every time the power switch is turned ON.	⊓
18	$\overline{INT}$	Interrupt request	Output	The moment the data is output to CPU-2, an interrupt request pulse is output to store the data into CPU-2.	⊓
19	———	———	—	Not used.	
20	TEST			Connected to B + 12V.	
21	Vss	Power terminal		Connected to B + 12V.	
22	KEY SENSE			Not used.	
23	CI-OUT	Cassette IN display	Output	Output to display the cassette mark during cassette loading.	H: during cassette loading
24	———	———	—	Not used.	

	VTR SEL OUT	TV/VTR selecting	Output	Output to change over the antenna of an RF modulator to TV side or VTR side. Automatically goes "H" in the PB mode. Output is inverted every time a TV/VTR switch is pressed.	H: VTR side L: TV side
	S·C·IN	Output for Cassette IN reading	Output	Output to inform CPU-1 that loading is completed. When loading is completed, a cassette IN switch (S991) is pressed by the cassette to store into a 5-pin terminal.	
	S·C·OFF	Output for Cassette OFF reading	Output	Output to inform CPU-1 that unloading is completed and the cassette is unthreaded. During unthreading, a cassette OFF switch (S301) is turned ON by the cam to store into a 5-pin terminal.	
	S·L·END	Output for threading end reading	Output	Output to inform CPU-1 that threading is completed. During end of threading, a threading end switch (S993) is turned ON to store into a 5-pin terminal.	
	S·UN·L·END	Output for unthreading end reading	Output	Output to inform CPU-1 that unthreading is completed. During end of unthreading, an unthreading end switch (S994) is turned ON to store into a 5-pin terminal.	
	———	———	———	Not used.	
	———	———	———	Not used.	
	———	———	———	Not used.	
	TMR·SW	TIMER REC mode	Input	Goes "H" when a TIMER REC switch is turned ON. Input to inform CPU-1 that the unit is in the TIMER REC mode. The AUTO REW mode is canceled at tape end during TIMER REC.	L: when not in the TIMER REC mode H: when in the TIMER REC mode
	$\overline{\text{REC}}$	REC mode	Input	Input when a REC switch is pressed and the unit enters the TIMER REC mode.	
	$\overline{\text{FF/CUE}}$	FF/BETASCAN mode	Input	Input when a FF/BETASCAN switch and the BETASCAN switch of a remote controller are pressed.	
	$\overline{\text{STOP}}$	STOP mode	Input	Input when pressing a stop switch and sensing the stop signal from a remote controller.	
	$\overline{\text{PAUSE}}$	PAUSE mode	Input	Input when a PAUSE switch and the PAUSE switch of a remote controller are pressed.	
	$\overline{\text{PLAY}}$	PB mode	Input	Input when a PB switch and the BETASCAN switch of a remote controller are pressed.	
	$\overline{\text{REW/REV}}$	REW/BETASCAN mode	Input	Input when a REW/BETASCAN switch and the BETASCAN switch of a remote controller are pressed.	
	$\overline{\text{VTR SEL}}$	VTR/TV antenna selecting	Input	Input when a VTR/TV switch is pressed. The output of a 25-pin terminal is inverted.	
	Vcc	Power terminal		Connected to GND.	
	CLK	Clock	Input	External clock signal input	400kHz

· **Input/output terminal of system control IC (IC402)**

Terminal No.	Designation	Meaning	I/O	Function and operation	Signal
1	———	———	———	Not used.	
2	LOAD	Loading	Output	Output to perform loading and threading.	
3	UN LOAD	Unloading	Output	Output to perform unloading and unthreading.	
4	CAP STOP	Capstan motor stop	Output	Output to stop the capstan motor.	
5	DRUM STOP	Drum motor stop	Output	Output to stop the drum motor.	
6	$\overline{\text{INT}}$	Interrupt request	Input	An interrupt request pulse is input the moment the data is fed from CPU-1. The data from CPU-1 is stored into CPU-2.	
7	RESET	Reset	Input	Input to initialize CPU-2. A pulse is input every time the power switch is turned ON/OFF.	
8	REEL STOP	Reel motor stop	Output	Output to stop the reel motor.	
9	REEL LOW	Reel Low	Output	Output to speed down the reel motor.	
10	REEL FWD	Reel rotation in the FWD direction	Output	Output to change over the rotational direction of a reel.	H: FWD direction L: Reverse direction
11	———	———	———	Not used.	
12	UN BRK S	Brake canceling and plunger starting	Output	Output to start the plunger to release the brake of a take-up reel.	
13	UN BRK H	Brake canceling and plunger holding	Output	Output to hold the brake plunger.	
14	PINCH S	Pinch roller plunger starting	Output	During loading (unloading) and threading (unthreading), changes over the drive of a loading motor. Output to start the plunger to pressure-contact a pinch roller.	
15	PINCH H	Pinch roller plunger	Output	Output to hold the pinch roller plunger.	
16	FF/REW OUT	FF/REW mode	Output	Output when entering the FF, REW, BETASCAN, and BETA SKIPSCAN modes.	
17	REW OUT	REW mode	Output	Output when entering the REW and BETASCAN (REW) modes.	
18	PLAY OUT	PB mode	Output	Output when entering the PB, BETASCAN, BETA SKIPSCAN and PB PAUSE modes.	
19	REC OUT	REC mode	Output	Output when entering the REC and REC PAUSE modes.	
20	TEST			Connected to B + 12V.	
21	Vss	Power terminal		B + 12V	
22	REC·$\overline{\text{P}}$ 2	REC·$\overline{\text{PAUSE}}$ 2	Output	Output when entering the REC·PAUSE mode.	H: REC mode L: REC·PAUSE mode

	REC · $\overline{P}$	REC · PAUSE	Output	Output when entering the REC · PAUSE mode.	H: REC mode L: REC · PAUSE mode
4	V MUTE	Video muting	Output	Video signal muting output	⌐‾→
5	MC	Mode control	Output	Output when entering the BETASCAN, PB · PAUSE and BETA SKIPSCAN modes.	⌐‾→
6	A MUTE	Audio muting	Output	Audio signal muting output	⌐‾→
7	PAUSE OUT	PAUSE	Output	Output when entering the PUASE mode.	⌐‾→
8	N.C				
9	PAUSE LMP	PAUSE display	Output	Display-output when entering the PAUSE mode.	⌐‾→ : PB · PAUSE ⌐⌐⌐ : REC · PAUSE
0	βI	βI PB mode	Output	Output when playing back the βI tape.	⌐‾→
1	βIII	βIII mode	Output	βIII/βII mode selecting output	H: βIII mode L: βII mode
2	INHIBIT	Data transfer inhibiting	Output	Output to inhibit the data transfer by informing CPU-1 that CPU-2 is in data processing.	⌐_
3	βIII/$\overline{\beta II}$	REC time changing-over	Input	Input to change over the REC time	H: REC in the βIII mode L. REC in the βII mode
4	βI CANCEL	βI PB inhibiting	Input	Input to inhibit PB in the βI mode.	H: βI PB inhibiting L: Inhibit canceling
5	CTL IN	CTL signal	Input	A CTL signal is input in the PB mode. The video muting (V MUTE) output goes "H" when no CTL signal is input. PB mode discrimination.	⌐⌐⌐
6	D4	Data	Input	Data input from CPU-1	Parallel data
7	D3	Data	Input		
8	D2	Data	Input		
9	D1	Data	Input		
0	D0	Data	Input		
1	Vcc	Power terminal		Grounding side	
2	CLK	Clock	Input	External clock signal input	⌐⌐⌐ *400kHz*

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque ⚠ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

NOTE:
- Items with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remark column.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

SECTION 5
ELECTRICAL PARTS LIST

NOTE:

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque ⚠ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- Items marked " ♦ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

CAPACITORS
- MF : μF, PF : μμF

RESISTORS
- All resistors are in ohms
- F : nonflammable

COILS
- MMH : mH, UH : μH

When indicating parts by reference number, please include the board name.

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque ⚠ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

When indicating parts by reference number, please include the board name.

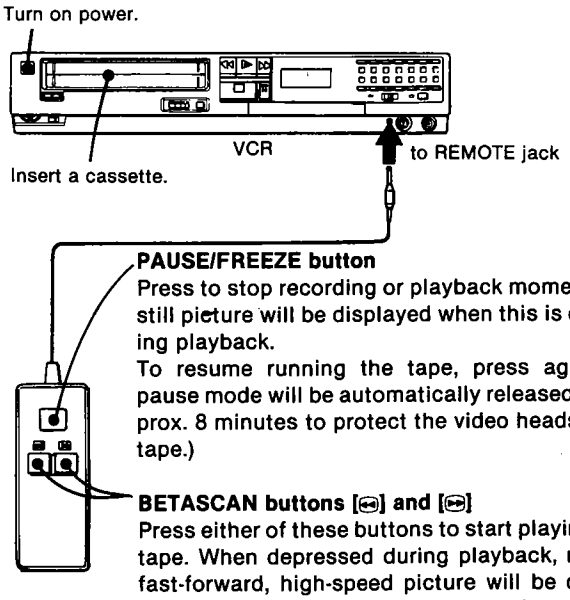
RM-59W

SERVICE MANUAL

SPECIFICATIONS

Dimensions	Approx. 105 × 17 × 40 mm ($4\frac{1}{4} \times \frac{11}{16} \times 1\frac{5}{8}$ inches) (w/h/d) including projecting parts
Weight	Approx. 130 g (5 oz)
Cable length	6 m ($19\frac{2}{3}$ feet)

OPERATION



PAUSE/FREEZE button

Press to stop recording or playback momentarily. A still picture will be displayed when this is done during playback.

To resume running the tape, press again. (The pause mode will be automatically released after approx. 8 minutes to protect the video heads and the tape.)

BETASCAN buttons [⏪] and [⏩]

Press either of these buttons to start playing back a tape. When depressed during playback, rewind or fast-forward, high-speed picture will be displayed on the TV screen and when released normal playback will resume.

As long as ⏪ button is pressed, high-speed backward picture will be displayed.

As long as ⏩ button is pressed, high-speed forward picture will be displayed.

TABLE OF CONTENTS

SECTION 1
PREPARATION FOR MECHANICAL SECTION CHECK, ADJUSTMENT AND REPLACEMENT

1-1. DISASSEMBLY OF CABINET

❶ Remove the four case set screws.
❷ Remove the upper case in the direction indicated by the arrow.
❸ Remove the ten screws (BVTT2.6×8).
❹ Remove the lower case.
❺ Remove the screw (BVTT2.6×8).
❻ Remove the protrutions of control panel Ass'y from the main unit.
❼ Remove the control panel Ass'y in the direction indicate by the arrow.

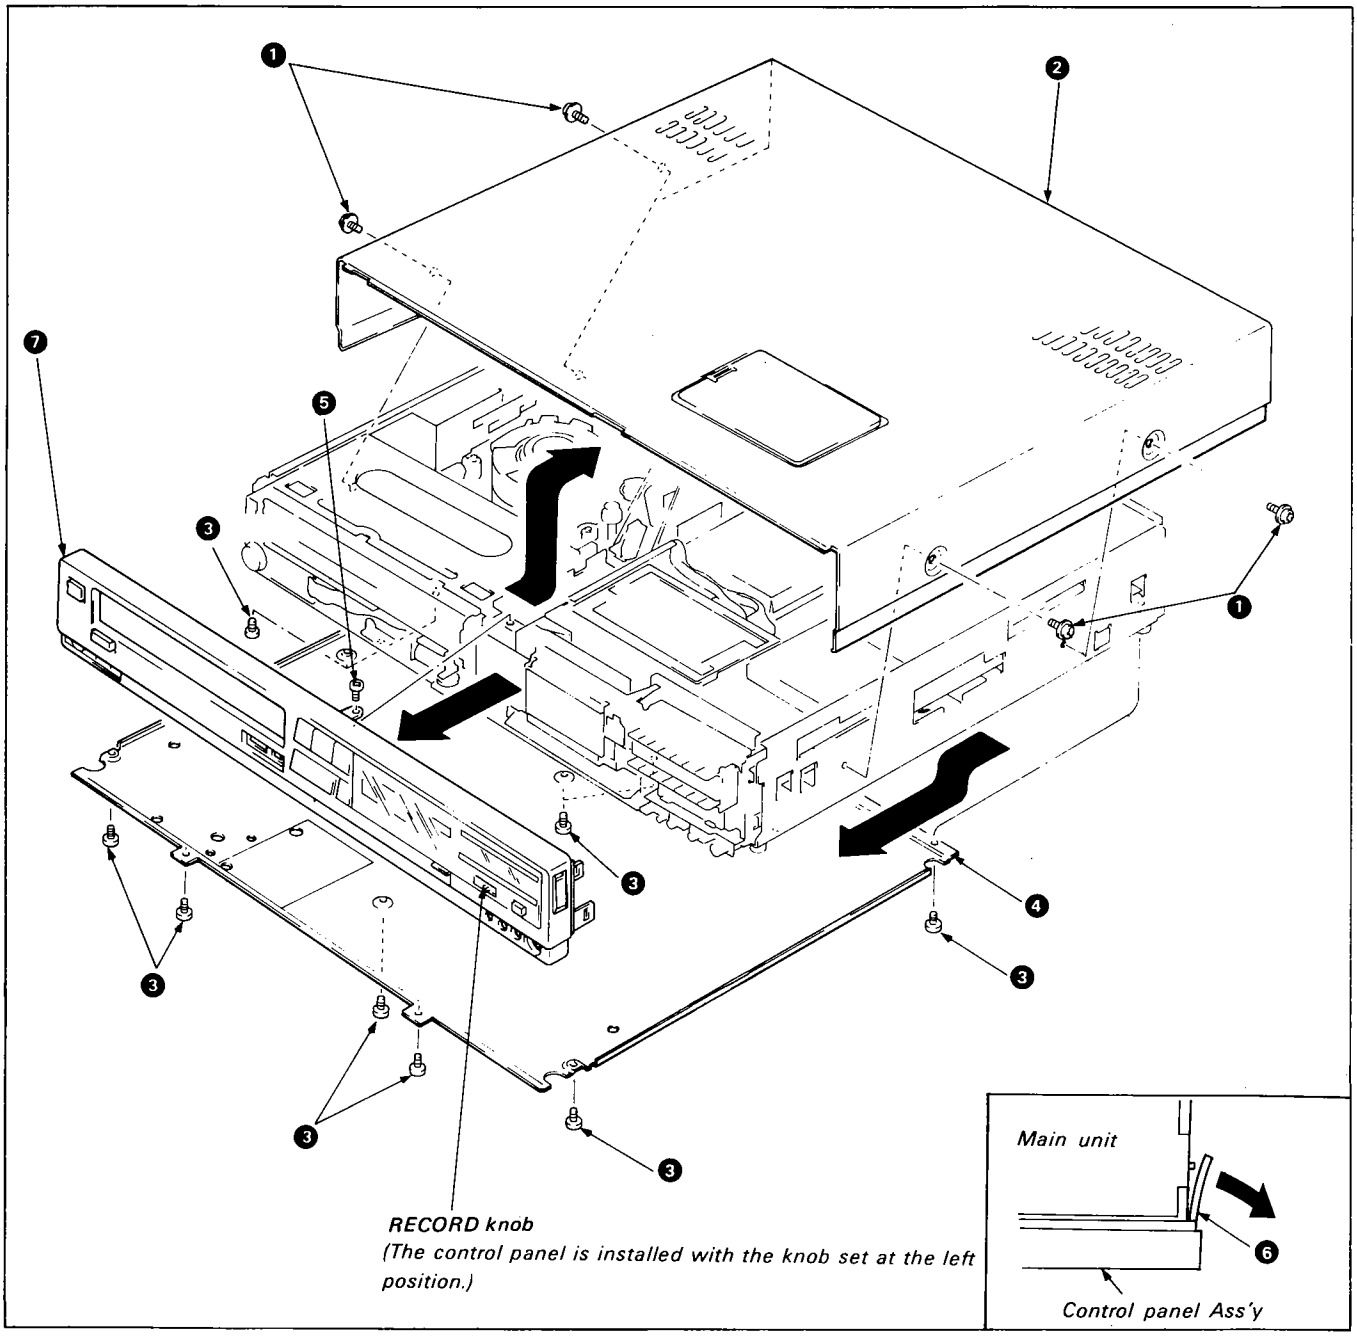

Fig. 1-1 Disassembly of Cabinet

1-2. REMOVAL OF RP-8 BOARD

❶ Remove the two screws (BVTT2.6×6).
❷ Remove the RP-8 board block.
❸ Pull out the connectors CN2 (white) and CN4 (white).

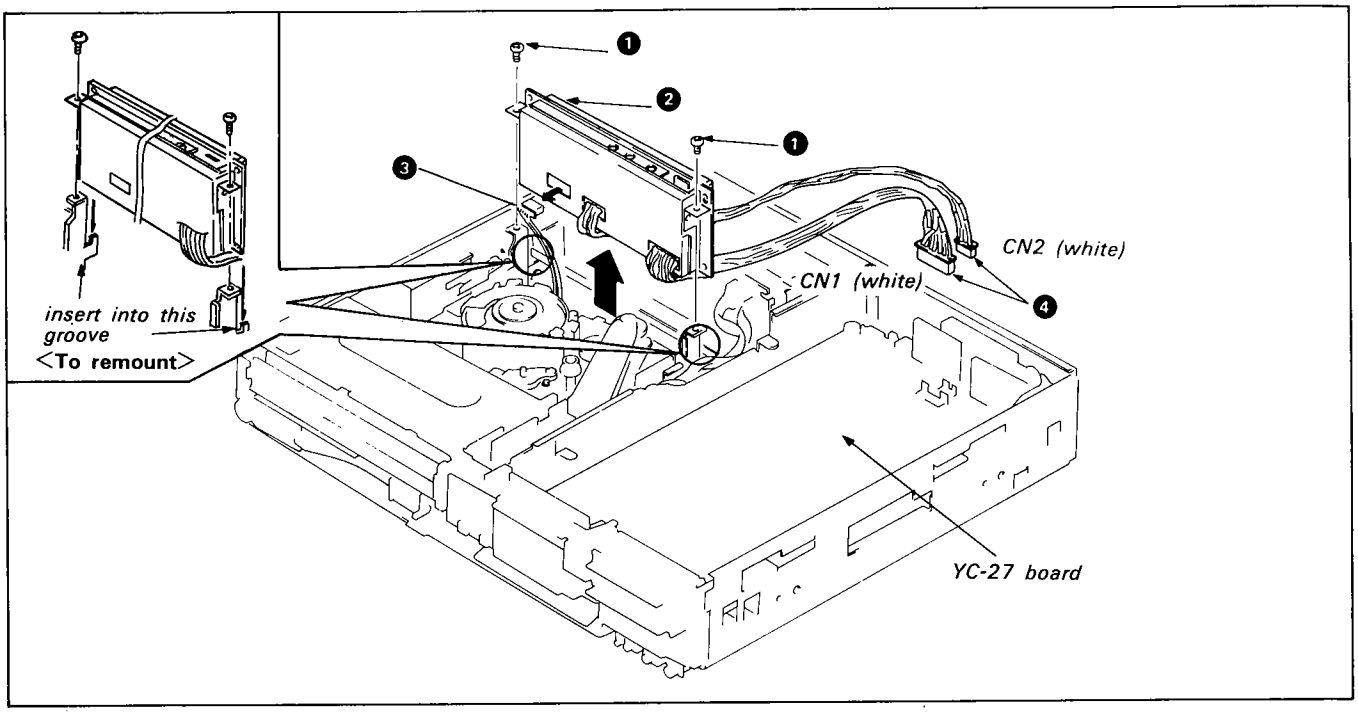

Fig. 1-2. Removal of RP-8 board

1-3. REMOVAL OF TA-20 BOARD

❶ Remove the two screws (BVTT2.6×6).
❷ Remove a screw (BVTT2.6×6).
❸ Pull out the eight connectors.
❹ Remove the TA-20 or TA-12 board. (Supported using a videocassette tape).

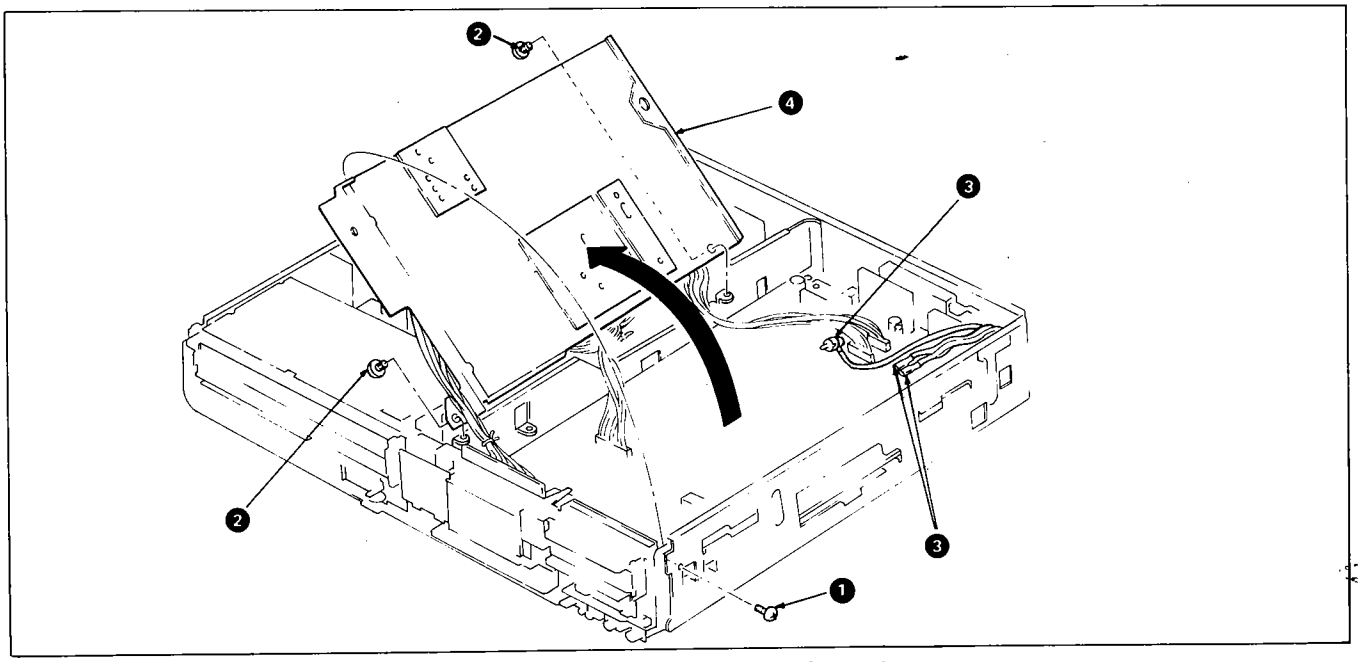

Fig. 1-3. Removal of TA-20 board

1-4. OPENING OF SS-25 BOARD

1. Place the main unit with a left side panel on the bottom.
2. Remove the two screws (BVTT2.6×6).
3. Remove the SS-25 board. (Supported using a videocassette tape.)

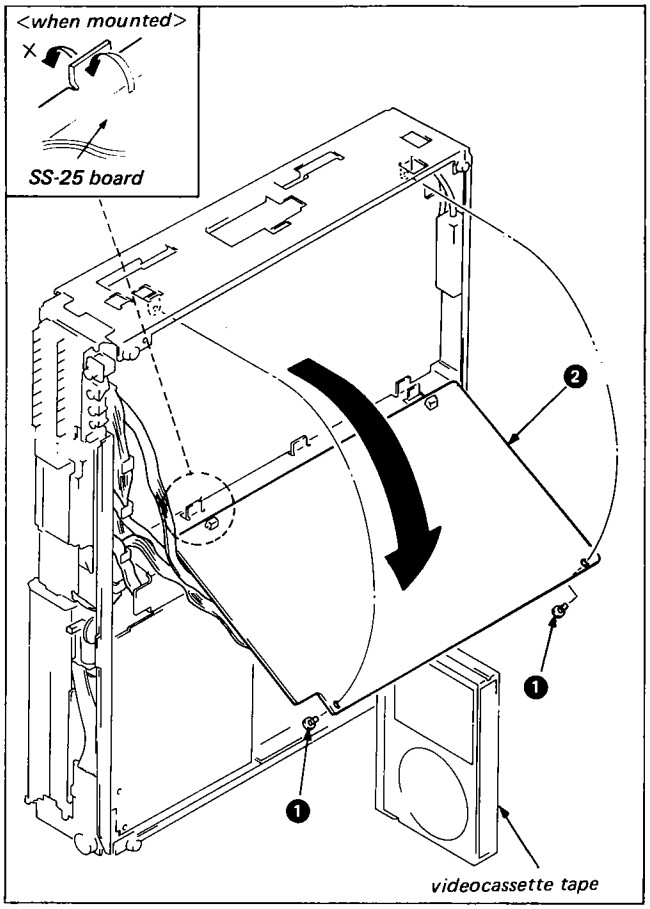

Fig. 1-4. Opening of SS-25 board

1-5. REMOVAL OF POWER BLOCK

1. Remove the RP-8 board block.
   (Refer to 2 Removal of RP-8 Board)
2. Remove the four screws (BVTT2.6×6).
3. Pull out the three connectors
4. Pull out the connector CN10 (white) from the SS-25 board.
5. Remove the power block.

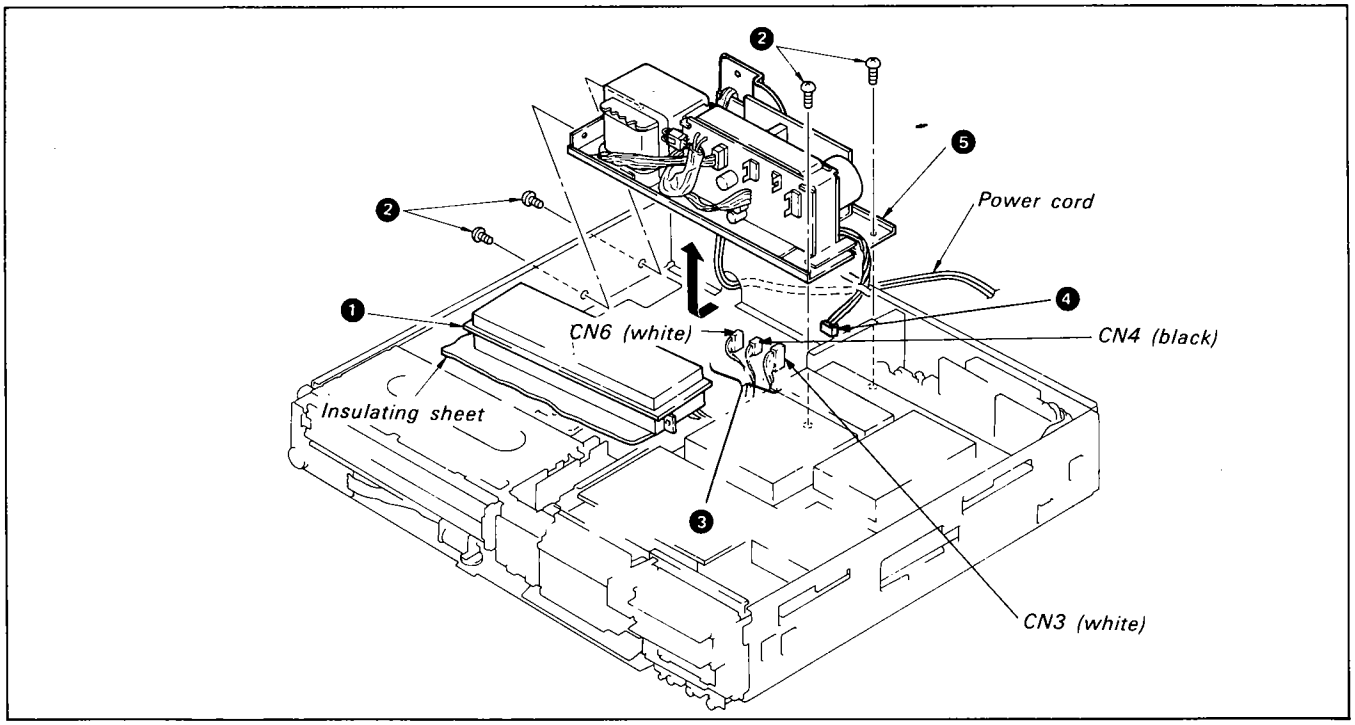

Fig. 1-5. Removal of power block

1-6. OPERATION OF THE UNIT WITH THE FL CASSETTE COMPARTMENT REMOVED

1-6-1. How to Put the Unit into Threading Completed Mode when the FL Cassette Compartment is Removed

❶ Connect jumper wires to short pin 1 of the CN301 connector on circuit board CS-3 to pin 2, and pin 3 to pin 4.
Note:
Be careful that the jumper wires do not touch any other parts (use tape or other insulation).

❷ Press the cassette-in switch and leave it pressed in. When the power button is turned ON, threading starts.
* Refer to section 3-6 for instructions on how to remove the FL cassette compartment.

[How to EJECT in this condition]

- Press the EJECT button. When unthreading is completed and the internal gear starts to turn, turn the power OFF.

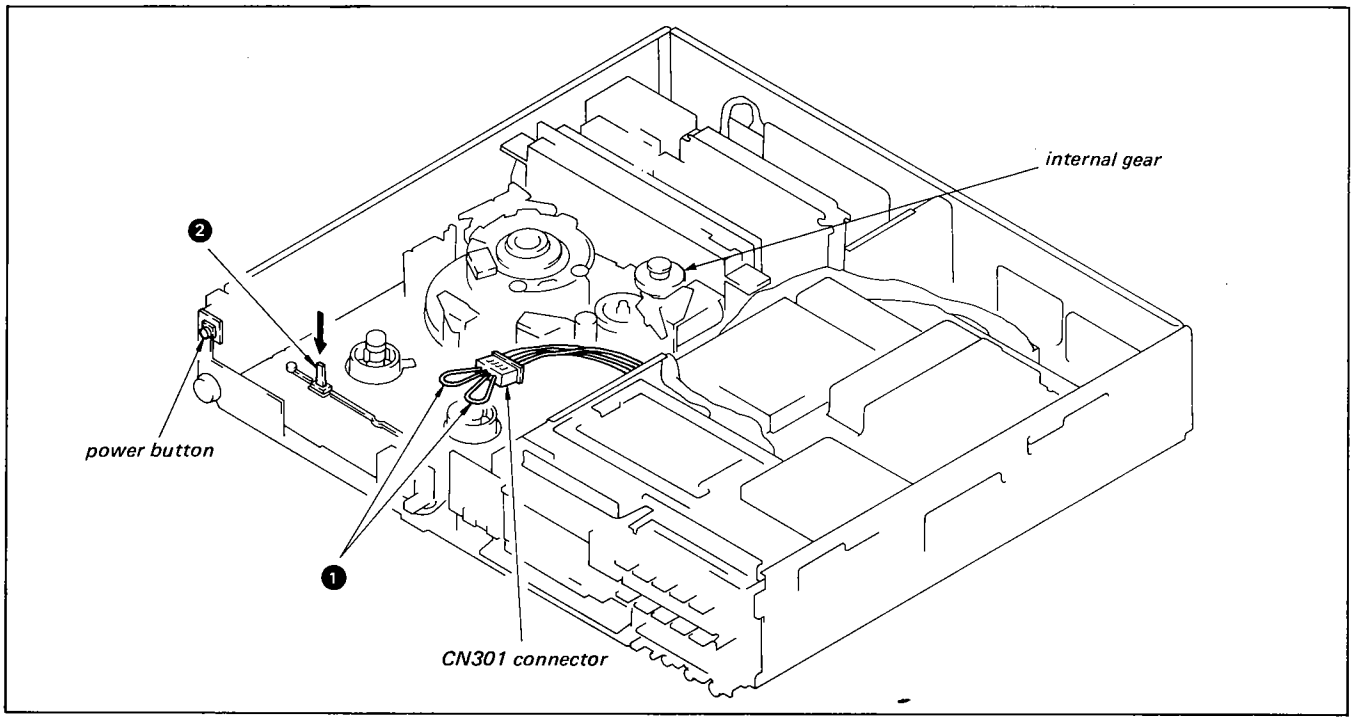

Fig. 1-6. How to thread the tape when the FL cassette compartment has been removed

1-6-2. Playback Without Cassette Installed

Complete threading by the procedure described in 1-6-1, then press the playback button.

1-6-3. How to Put in Recording Mode Without Cassette Installed

1. Thread by the procedure in 1-6-1, then press the accidental erasure prevention switch shown in Fig. 1-7.
2. With the accidental erasure prevention switch pressed down, press the recording button.

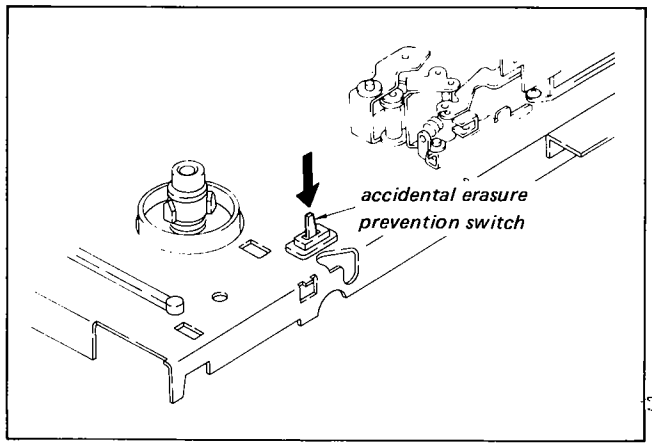

Fig. 1-7. How to put the recorder in recording mode with the FL cassette compartment removed

1-7. HOW TO LOAD, THREAD, UNLOAD AND UNTHREAD WITH THE POWER OFF

1-7-1. Manual Loading and Unloading

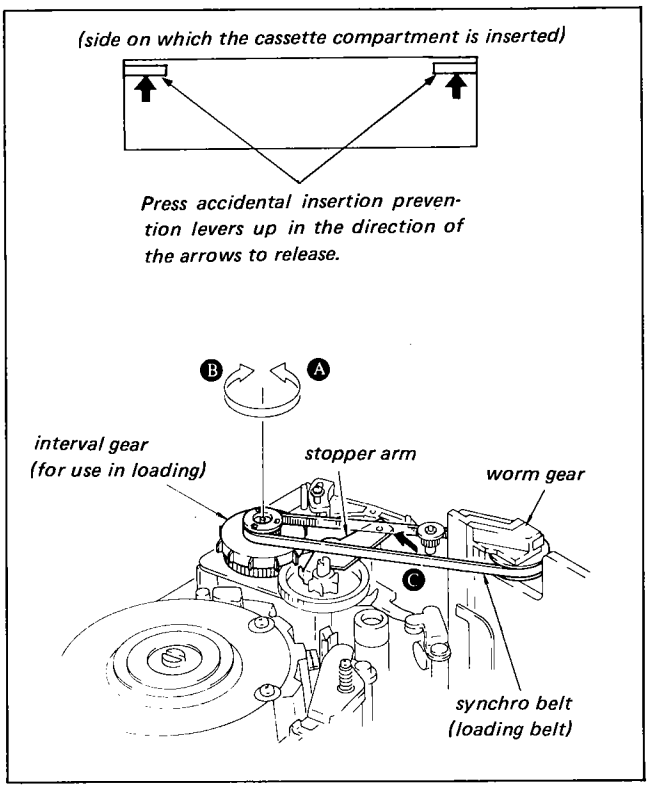

Fig. 1-8. Manual loading and unloading

1) Release the right and left accidental insertion prevention levers inside the cassette compartment, then press the stopper arm in the direction of arrow Ⓒ and release the internal gear stop.
2) Turn the internal gear manually in the direction of arrow Ⓐ until loading is completed.
3) To unload, turn the internal gear in the direction of arrow Ⓑ.

Note:
When the loading belt has been removed, load and unload by turning the worm gear manually.

1-7-2. Manual Threading and Unthreading

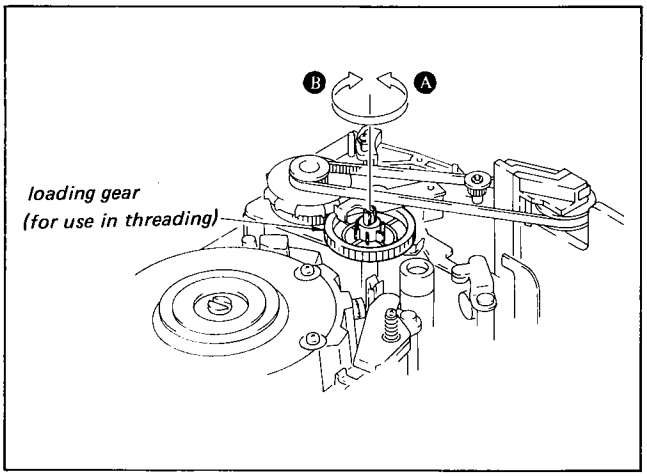

Fig. 1-9. Manual threading and unthreading

1) Turn the loading gear in the direction of arrow Ⓐ until loading is completed.
2) To unthread, turn the loading gear in the direction of arrow Ⓑ.

Note:
Always turn the loading gear sideways by hand.
Never use a screwdriver or other tool.

1-8. TOOLS AND FIXTURES REQUIRED FOR SERVICING

Ref.No.	Name	Part Code	Carved Jig No.	Use and Remarks
J-1	Torque Measurement Tape	J-6080-003-C	SL-0003C	forward torque and back tension measurement
J-2	Parallel Plate	J-6086-750-A	SL-0657	audio/CTL head lateral adjustment capstan shaft vertical adjustment
J-3	Dental Mirror (handle) Dental Mirror (mirror)	J-6080-029-A J-6080-030-1	SL-5052	tape path and tape traveling adjustment check
J-4	Alignment Tape (KR5-1M)	8-969-995-82	——	tracking, overall adjustment of picture quality, etc.
J-5	Cleaning Fluid	Y-2031-001-0	——	
J-6	Thickness Gauge	9-911-053-00

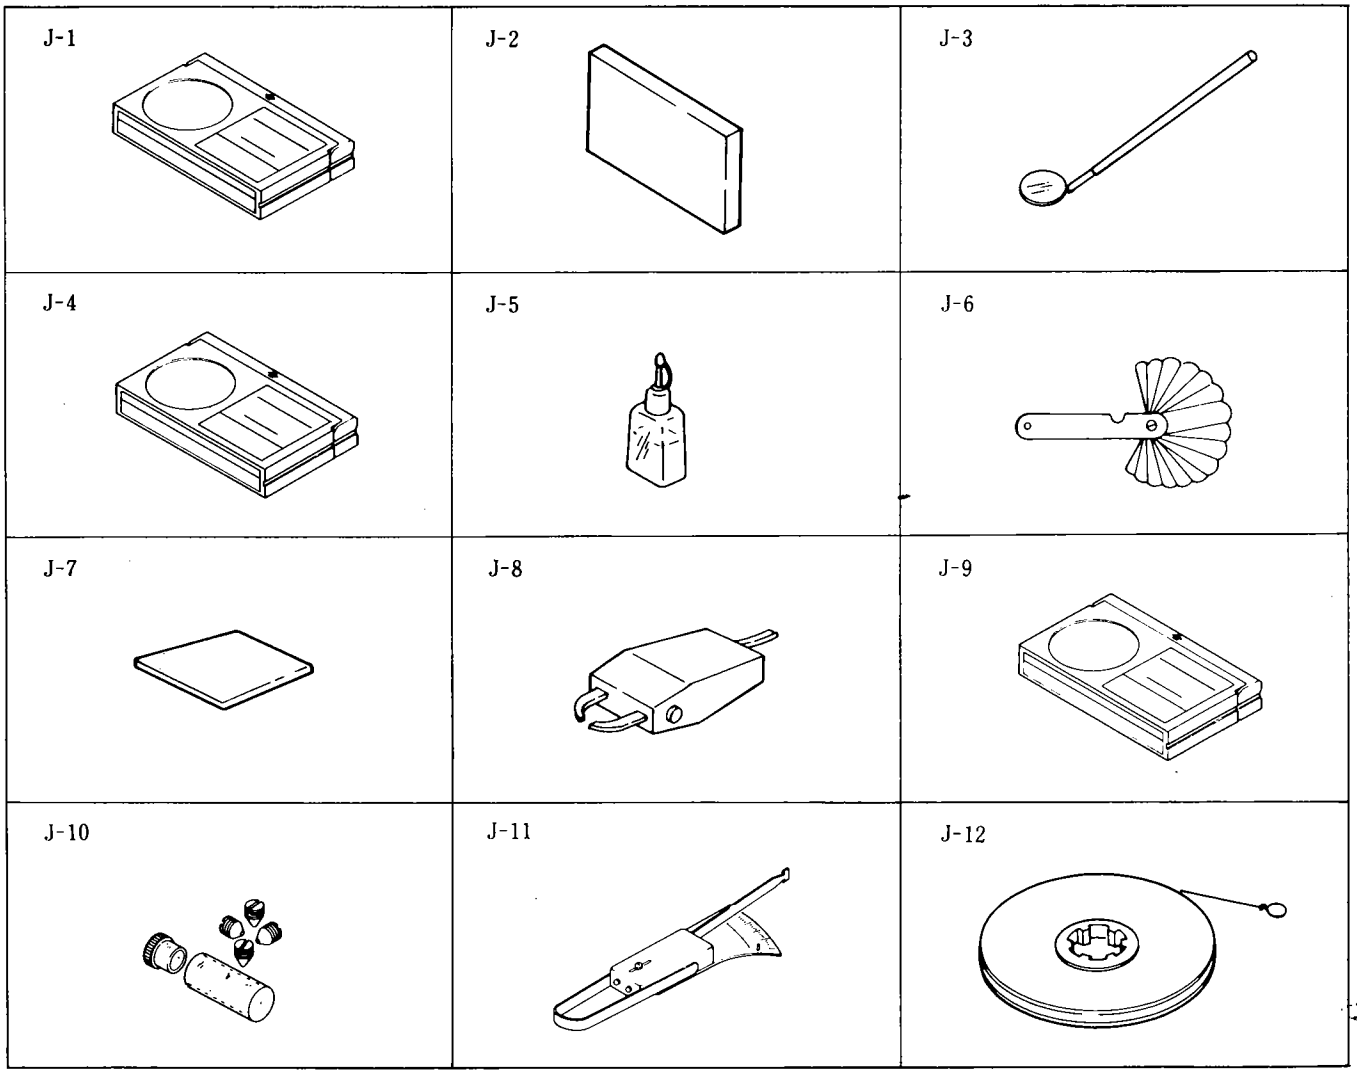

Fig. 1-10. Tools and fixtures required for servicing

SECTION 2
PERIODIC CHECK AND MAINTENANCE

In order to obtain the best performance from this unit and make full use of its capabilities, and to extend the life of the unit and tapes, it is recommended that the following periodic checks and maintenance be performed.

2-1. POST-REPAIR MAINTENANCE

The following must be done after every repair regardless of how many hours the user has operated the machine.

2-1-1. Cleaning of Rotating Head Disk Assembly

1) Press a chamois cloth (Jig Ref. No. J-7) which has been dipped in cleaning fluid (Jig Ref. No. J-5) lightly against the rotating drum assembly, then do the cleaning by slowly rotating the rotating head disk by hand. (Never try to clean by using the motor to turn it.)
2) Never try to clean by moving the chamois cloth at a right angle to the head tip. There is a very great danger of damaging the head tip if this is done.

2-1-2. Cleaning of the Tape Movement System

1) Clean the surfaces which the tape contacts during its movement (tape guide, drum assembly surface, capstan, pinch roller, etc.) with a chamois cloth that has been dipped in in cleaning fluid.

2-1-3. Cleaning the Drive System

1) Clean the driving parts with a cloth that has been dipped in cleaning fluid.

parts requiring cleaning

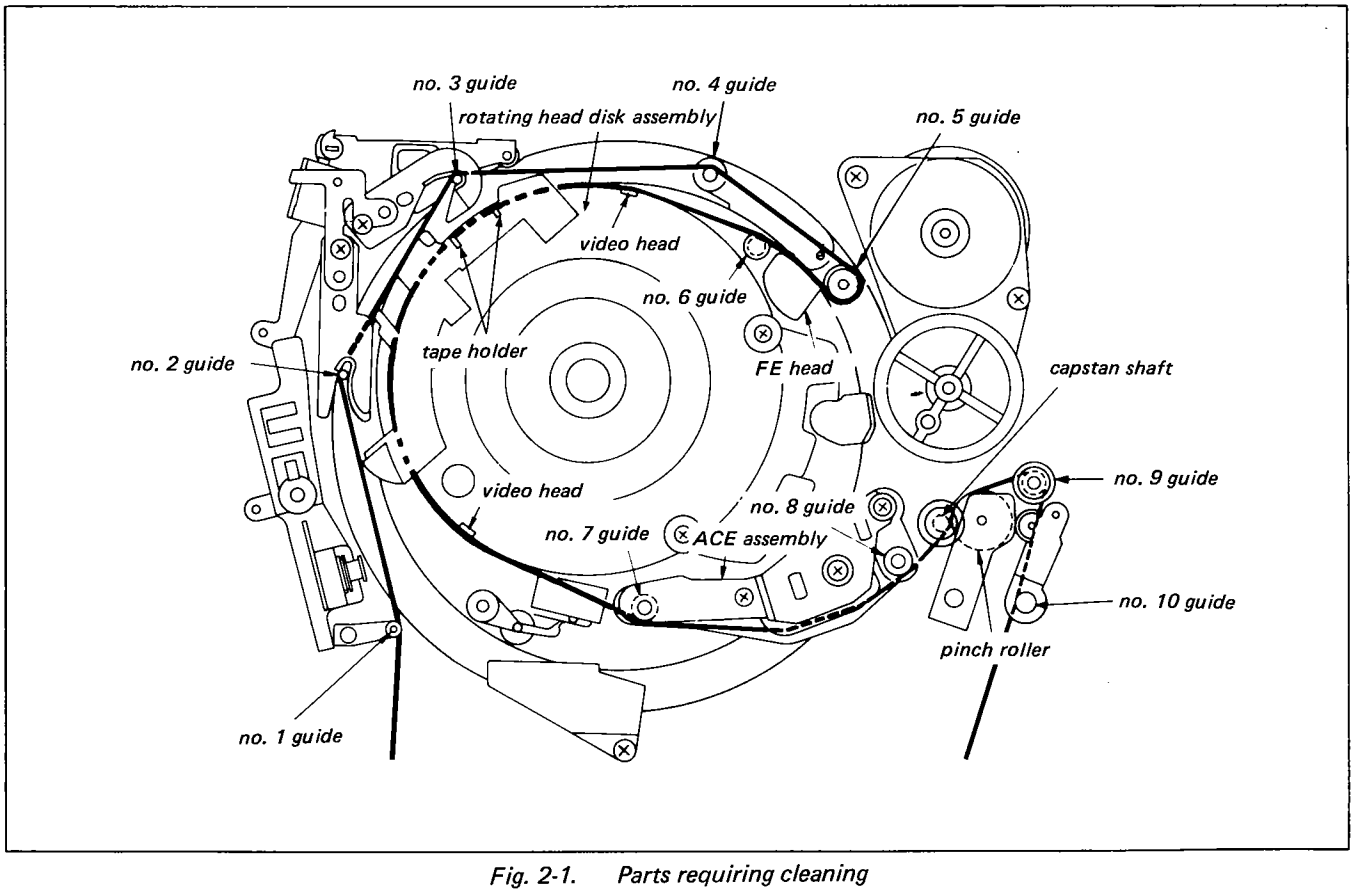

Fig. 2-1. Parts requiring cleaning

2-2. PERIODIC CHECK ITEMS

Perform the maintenance and check listed on the table below, accoring to user's operating hours.

	Maintenance & Check	Replacement Part No.	500	1,000	1,500	2,000	2,500	3,000	3,500	4,000	4,500	5,000	Remarks
Tape Trans-portation System	Cleaning of tape transportation system	———	○	○	○	○	○	○	○	○	○	○	This cleaning must be done whenever a repair is made.
	Cleaning and degaussing of ACE ass'y	———	○	○	○	○	○	○	○	○	○	○	
	Cleaning & degaussing of video disk ass'y	———	○	○	○	○	○	○	○	○	○	○	The life of the head varies, depending on operational conditions and method.
Driving System	Loading belt (synchro belt)	3-679-119-00	☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	• This cleaning must be done whenever a repair is made.
	Cleaning of iron core and opening of solenoid	———	–	–	–	○	–	–	–	○	–	–	Wipe iron core and opening of solenoid with dry cloth.
Performance Confirmation	Abnormal sound		☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	Adjust or replace the section which causes abnormal sound.
	Measurement of FWD back tension		–	☆	–	☆	–	☆	–	☆	–	☆	Confirmation must be made according to section Specified value: adjust to 30 ± 5 g•cm (When measured with torque cassette tape)
	Confirmation of brake system		–	☆	–	☆	–	☆	–	☆	–	☆	Confirmation must be made according to section
	Confirmation of record & playback functions		☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	Perform the confirmation whenever repair is made.
	Measurement of forward torque		☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	Adjust to 80 ± 5g•cm (SL-0003C)

○ Cleaning ★ Replacement ☆ Confirmation

Note:
On overhaul
When overhauling the unit, replace parts as indicated in the above table.

SECTION 3
CHECK, ADJUSTMENT AND REPLACEMENT PROCEDURES

3-1. REPLACEMENT OF ROTATING HEAD DISK ASSEMBLY

3-1-1. Removal of the Rotating Head Disk Assembly (Fig. 3-1)

❶ Remove the two screws that hold the damper assembly in place, then remove the damper assembly.

❷ Use a hexagonal wrench to remove the hexagonal socket bolt that holds the upper drum assembly in place, then remove the upper drum assembly.

Note:

Turn the upper drum to remove, being careful not to move the adjusting plate. Movement of the adjusting plate will have a great effect on the tape path, so caution is required.

❸ Unsolder the rotating head disk relay plate (4 red and white leads).

❹ Remove the two hexagonal socket bolts holding rotating head disk assembly ❺ in place, then remove the rotating head disk assembly.

Note:

Be careful not to touch the head tip with the hand or bang anything against it.

3-1-2. Mounting of the Rotating Head Disk Assembly (Fig. 3-1)

1) Insert rotating head disk ❺ in place, being careful of the direction so that the red and white leads are in the right places.

2) Tighten hexagonal socket bolt ❹ and solder the lead wires.

Note:

Be careful to solder the lead wires correctly and not to break any wires.

3) Attach the upper drum, being careful (as during removal) not to move the adjusting plate. While pressing the two points that determine the height, tighten hexagonal socket bolt ❷.

Note:

When inserting the upper drum, be careful that it does not touch the head tip.

Note:

When replacing the rotating drum head, it can happen that the rotating head disk assembly will be hard to remove. In such a case, remove it using the method explained below (Fig. 3-2).

❶ Remove the hexagonal socket bolts that hold the rotating head disk assembly in place.

❷ When the head disk is jammed on tight and is hard to remove, screw the hexagonal socket bolts removed in step ❶ into the threaded holes removed from the original holes by 90°. Tighten them a little at a time.

The head disk will be lifted up by the two screws and will come off easily.

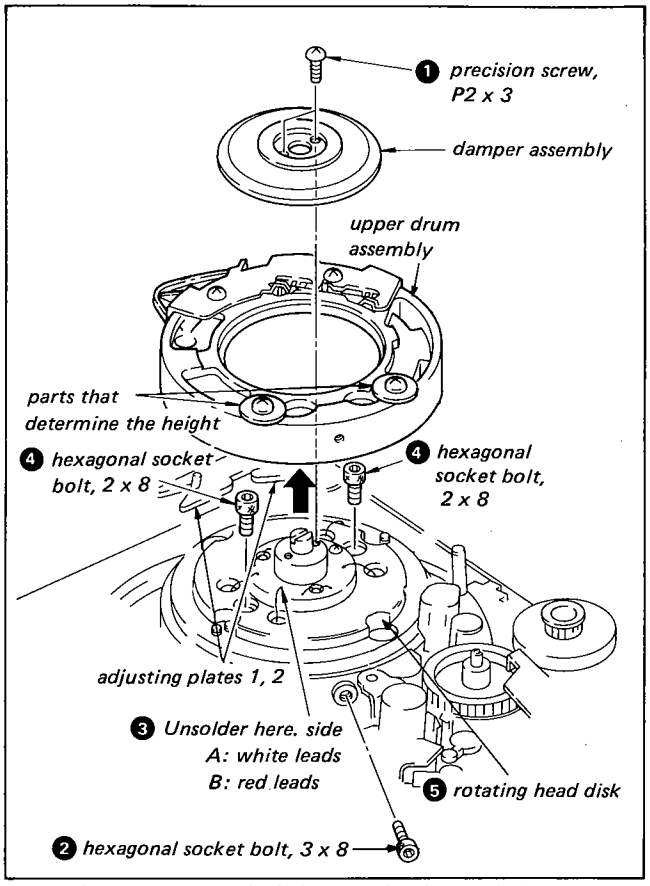

Fig. 3-1. Removal of the rotating head disk assembly I

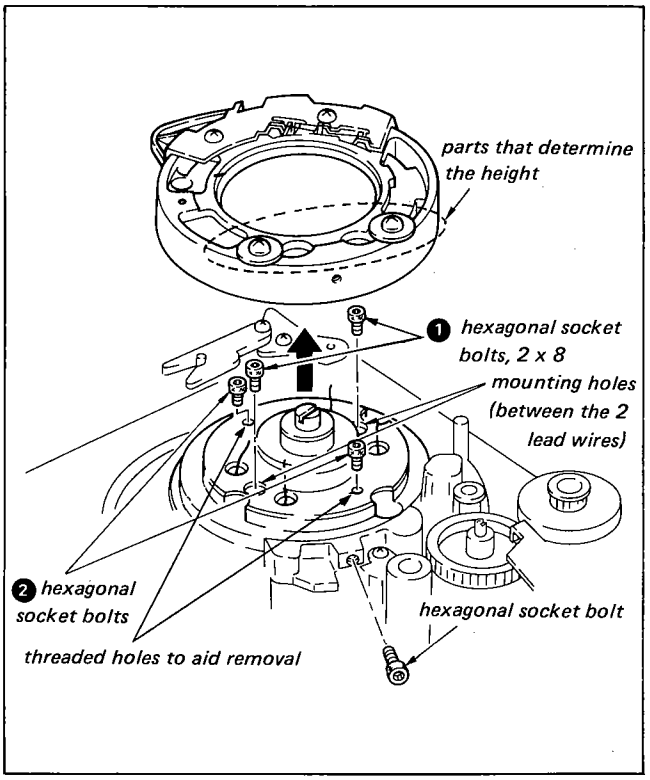

Fig. 3-2. Removal of the rotating head disk assembly II

3-2. VIDEO HEAD DIHEDRAL CHECK AND ADJUSTMENT

This adjustment is generally unnecessary, but it is sometimes necessary when the video head disk is replaced. (The video head disk used for maintenance has been precision adjusted at the factory using a microscope and almost never needs to be readjusted.)

When judging whether the video head dihedral angle is correct, the alignment tape is played back. When this is done the tracking control knob must be in the centering position. If the check is done with this knob in other than the center click position (if the tracking is off-center), even if the dihedral angle is correct the picture will be reproduced as if it were off.

Before this adjustment is performed, the ACE assembly position adjustment (refer to the section where the tape path adjustment is described) must be completed.

[Method of checking]

With the tracking control knob set to the center click position, play back the βII monoscope section of the alignment tape. Check to see if any of the vertical monoscope lines immediately below the switching pulse are reproduced double. If not, the dihedral angle is correct and does not have to be adjustment. If so, perform the adjustment as explained below.

[Method of adjustment]

1) As shown in Fig. 3-3, screw two dihedral angle adjustment screws (Jig Ref. No. J-10) into the adjustment screw holes on the side on which the red lead wires from the video head are connected, until the top of the screw is level with the video head disk. (If they are not screwed in far enough, the video head disk will not turn past the point where the top of the adjustment screw strikes the upper drum. Conversely, if it is screwed in too far, the head base will be moved, throwing the video head dihedral angle way off.)
   Note:
   The side on which the white lead wires are connected is the reference side and must not be moved.
2) Screw one of the two adjustment screws in a little bit farther until resistance is felt. Beyond this point, turning the screw still farther will move the video head, adjusting the dihedral angle.
3) With the adjustment screws in place, play the βII monoscope signal section of the alignment tape and see how the lines are reproduced. If the vertical lines are split apart more than before, turn the screw which was screwed in more tightly counterclockwise to loosen it, then adjust by tightening the other screw.
4) After the adjustment is completed, remove the adjustment screws and play the tape again to reconfirm that the adjustment is correct.

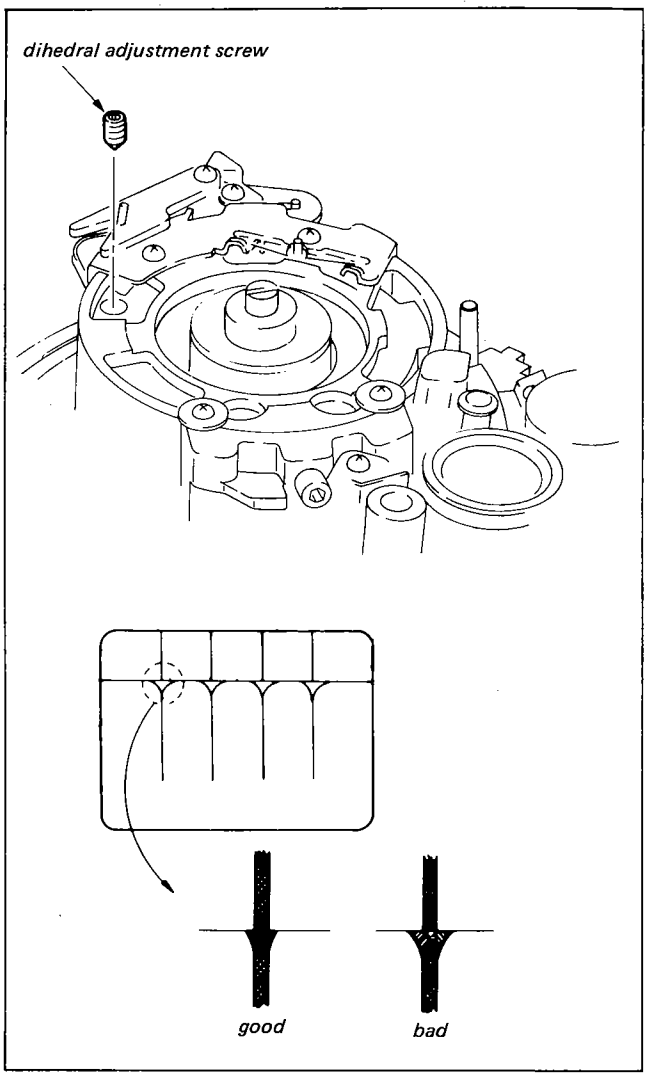

Fig. 3-3. Video head dihedral adjustment

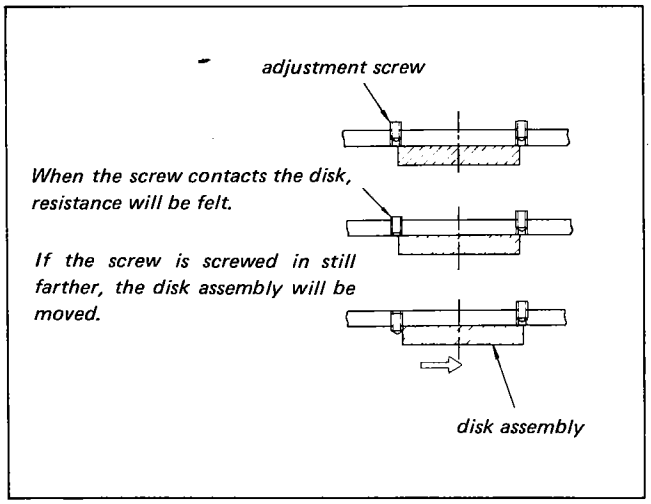

Fig. 3-4.

3-3. REPLACEMENT AND ADJUSTMENT OF THE DRUM ASSEMBLY

3-3-1. Replacement of the Drum Assembly

❶ Measure gap Ⓐ between adjusting plate 2 and the upper drum holder section, and record the measurement.
Note:
The position where the adjusting plate is mounted has a large effect on the tape path, so this measurement must be performed.

❷ Measure gap Ⓑ between adjusting plate 1 and the upper drum holder section, and record the measurement.
Note:
The position where the adjusting plate is mounted has a large effect on the tape path, so this measurement must be performed.

❸ Remove the screws shown in Fig. 3-5, then remove the tape guide ground plate and adjusting plates 1 and 2.

❹ Remove the 3 connectors from the rear of the chassis as shown in Fig. 3-6.

❺ Remove the 3 drum mounting screws from the rear of the chassis, then remove the main body of the drum assembly. After the replacement has been completed, adjust the drum path.

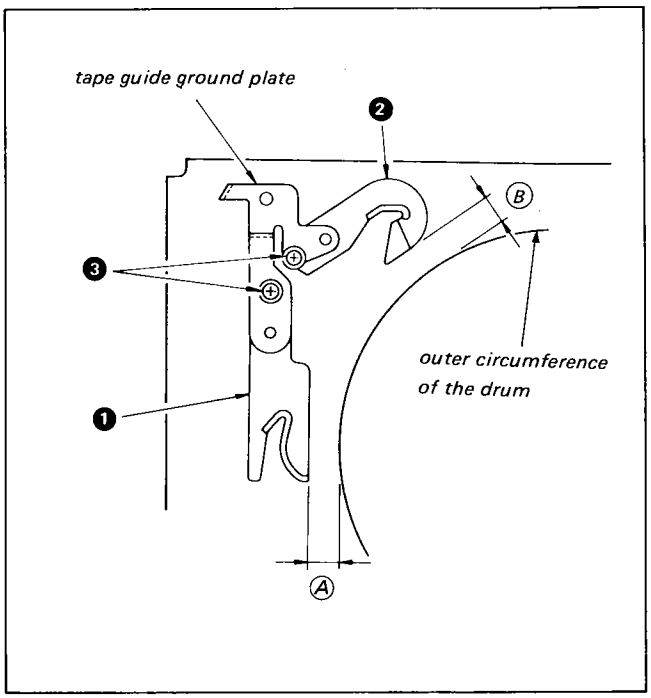

Fig. 3-5. Measurement of the position of adjusting plates 1 and 2

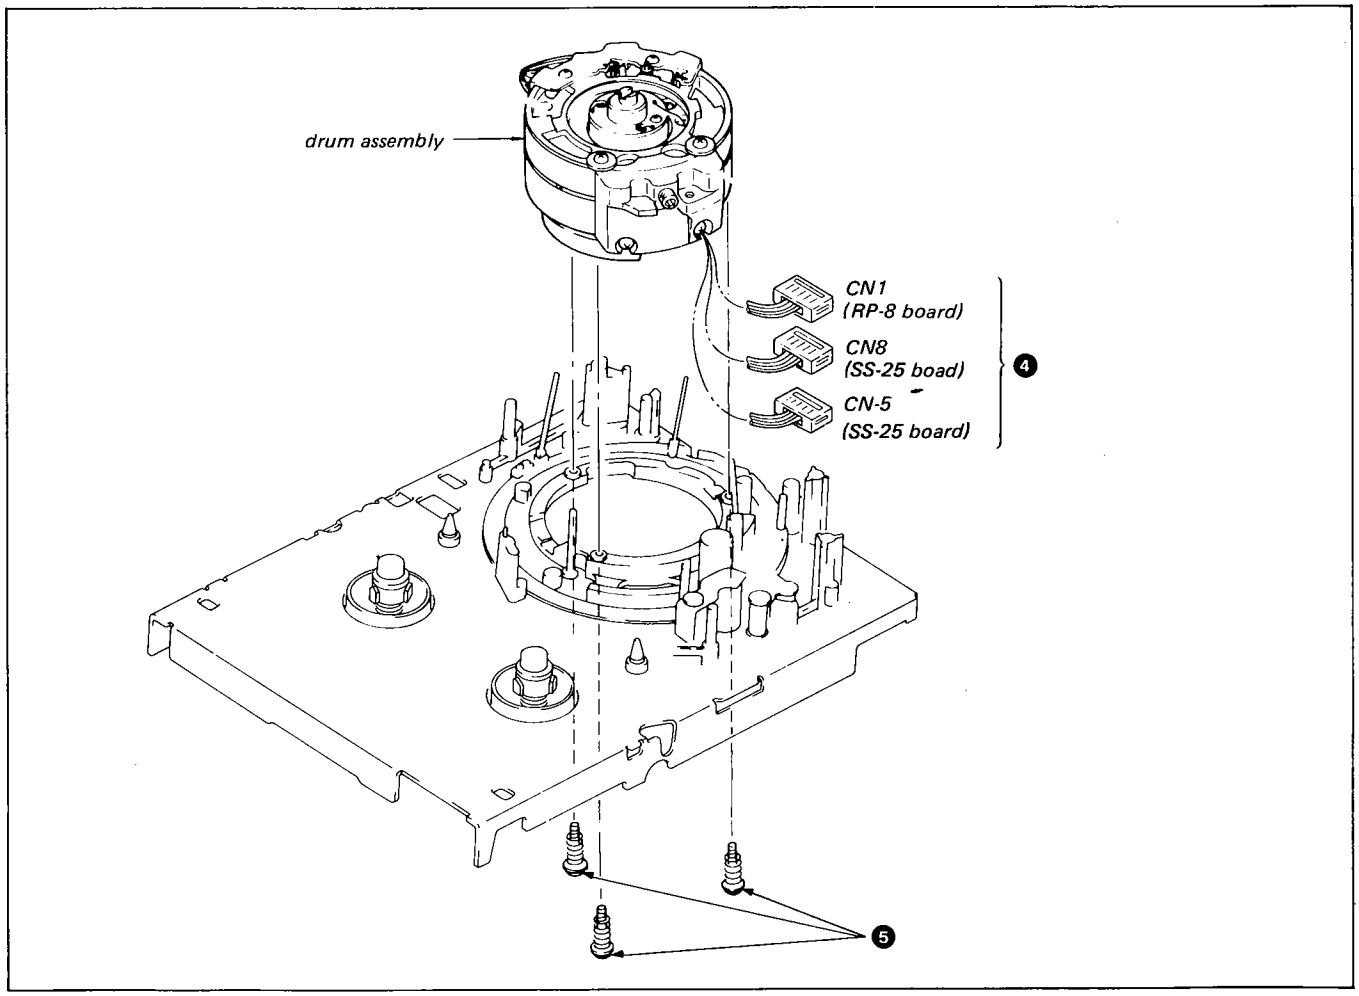

Fig. 3-6. Removal of the drum assembly

3-3-2. Adjustment of the Motor Gap when Replacing the Drum Assembly

After replacing the drum assembly, adjust the gap between the motor rotor and the coil to 0.3 mm to 0.6 mm (Fig. 3-7).

[Procedure]

1) When re-assembling the drum, use the spacers which were removed to produce a gap of between 0.3 mm and 0.6 mm. Measure the gap using the gauge that comes with the drum for assembly and maintenance use. One side of the gauge is 0.3 mm and the other side is 0.6 mm. If the gap is adjusted correctly, the 0.3 mm side should fit in and the 0.6 mm side should not.
2) If this fails to give the correct gap width, do not use the spacers which were removed; instead, use a combination of the 4 0.3 mm accessory spacers to obtain the correct width.

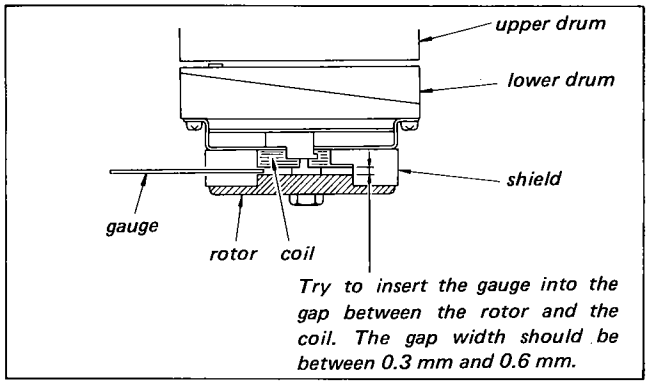

Fig. 3-7. Checking the motor gap width after replacing the drum assembly

Removal of the stator and rotor when replacing the drum

❶ Remove the nut and washer.
❷ Remove the rotor from the stator.
❸ Remove the 2 screws, then remove the stator from the main body of the drum.

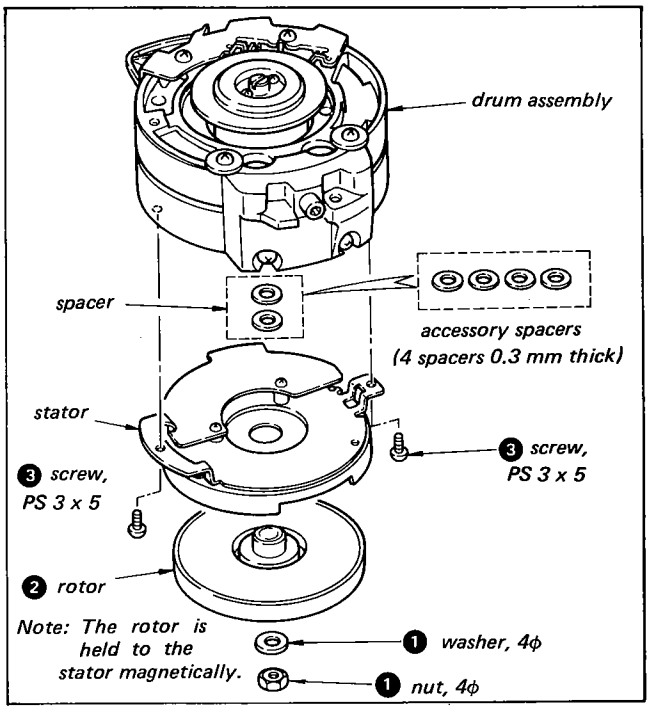

Fig. 3-8. Removal of the stator and rotor when replacing the drum

3-4. REPLACEMENT OF THE CAPSTAN MOTOR

3-4-1. Removal of the Capstan Motor (Fig. 3-9)

- Remove screws ❶, ❷ and ❸, then remove the capstan motor from the rear of the mechanical chassis.

Note:
After replacing the capstan motor, adjust the tape path as explained in section 4-3.

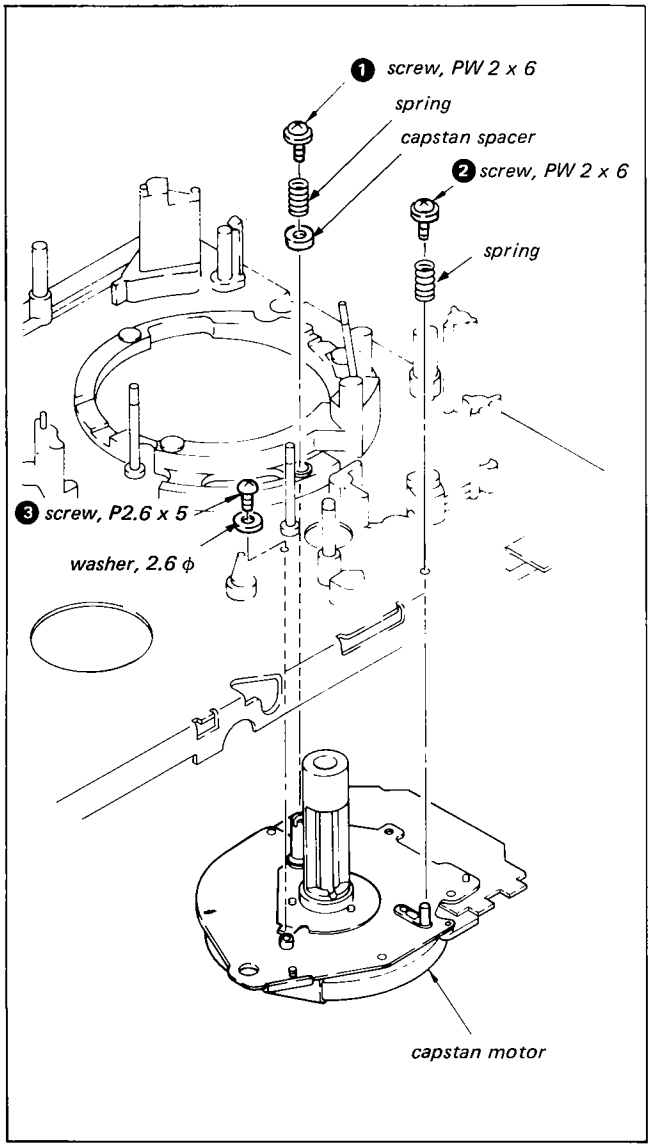

Fig. 3-9 Removal of the capstan motor

3-5. REMOVAL OF THE S COIL SENSOR (Fig. 3-10)

❶ Remove the spring.
❷ Remove the claw in the direction of arrow Ⓐ, then pull the S coil sensor out.
❸ Unplug the connector from CN407 on SS-25 board.

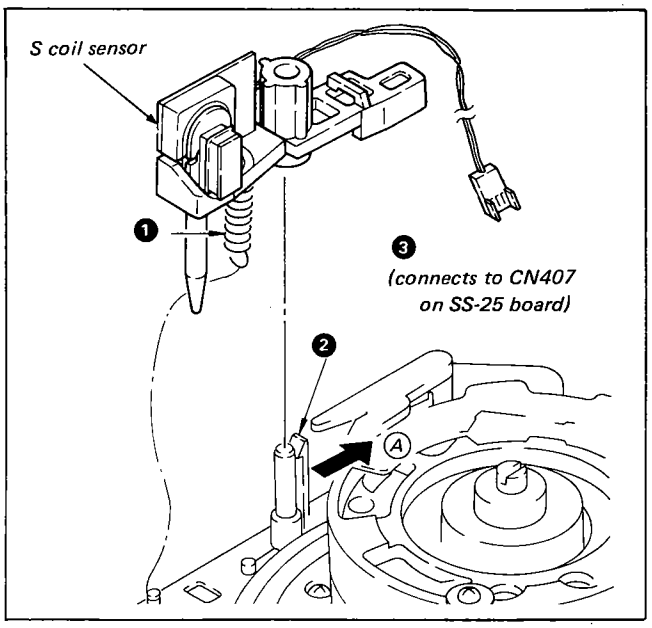

Fig. 3-10. Removal of the S coil sensor

3-6. REMOVAL OF THE FL CASSETTE COMPARTMENT ASSEMBLY (Fig. 3-11)

❶ Remove the internal gear flange.
❷ Remove the synchro belt.
❸ Remove the five screws (BVTT2.6×6).
❹ Pull out the connector CN301 (white).
❺ Remove the FL cassette compartment Ass'y in the direction indicated by the arrow.

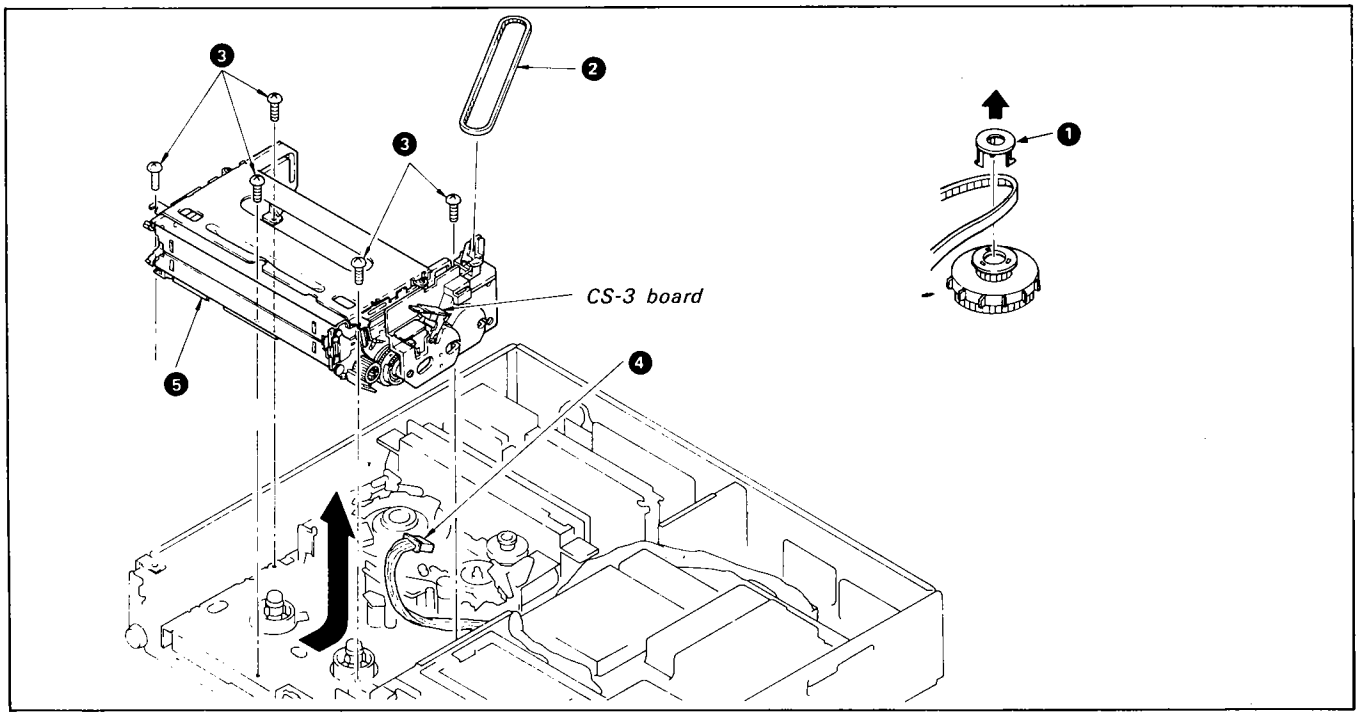

Fig. 3-11. Removal of the FL cassette compartment assembly

3-7. ADJUSTMENT OF THE FL CASSETTE COMPARTMENT

3-7-1. Adjustment of the Position of the Right Gear of the FL Cassette Compartment Assembly

In the FL cassette compartment assembly, the cassette holder must always move parallel to the mechanical chassis. The gear system is used to control the amount by which the cassette holder advances so that this will be the case. Consequently, if the gears in this section slip out of mesh, the next time the unit is assembled the gear mesh must be adjusted to the correct position; otherwise the cassette will not feed properly.

[Adjustment of the gear positions]

1. Get a positioning rod about 200 mm long and 1.5 mm in diameter ready.
2. While passing the positioning rod through the combination of the drive arm right and cassette ON cam, fit the latter on the right side plate. Similarly, fit the drive arm left onto the left side plate.
3. Similarly, while passing the positioning rod through the worm wheel, fit the latter onto the right side plate.
4. Similarly, while passing the positioning rod through the combination of the limiter gear and cassette OFF cam, fit the latter onto the right side plate.

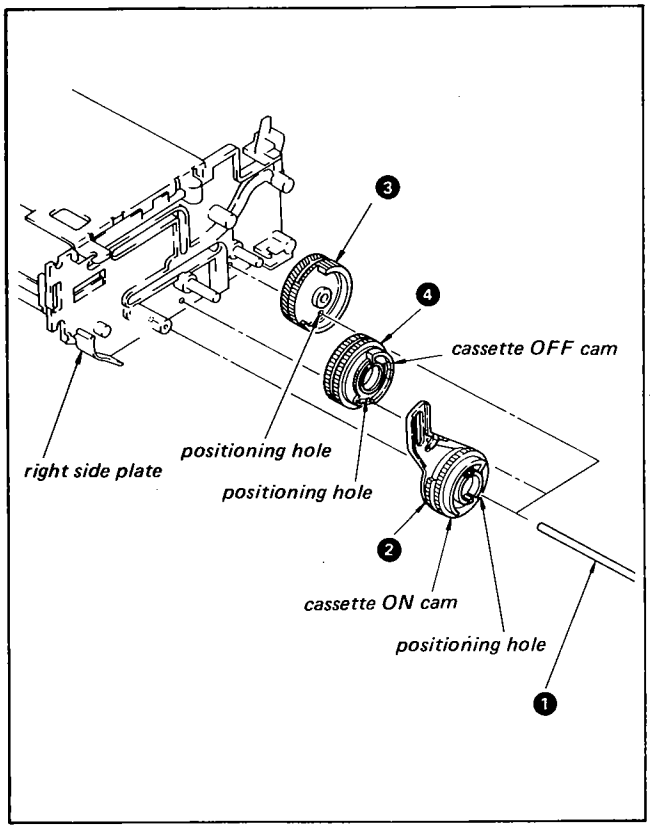

Fig. 3-12. Positioning of the FL cassette compartment gears

3-7-2. Cassette OFF Switch Operation Check and Adjustment

[Method of checking]

When inserting a cassette into the FL cassette compartment assembly, confirm that, as the cassette is inserted, the microswitch comes ON when the center of the drive roller is 0 to 5 mm from the end of the guide groove, as shown in Fig. 3-13. (The switch lever will be restored to tis original position, making a clicking sound.)

[Method of adjustment]

Loosen the screw that holds the cassette OFF cam attached to limiter gear A in place, move the cassette OFF cam in the direction of the arrow, adjust so that the cassette OFF switch comes ON when the above distance is 0 to 5 mm, and finally tighten the screw.

* When the cassette ON switch and cassette OFF switch operate, the threading motor comes ON.

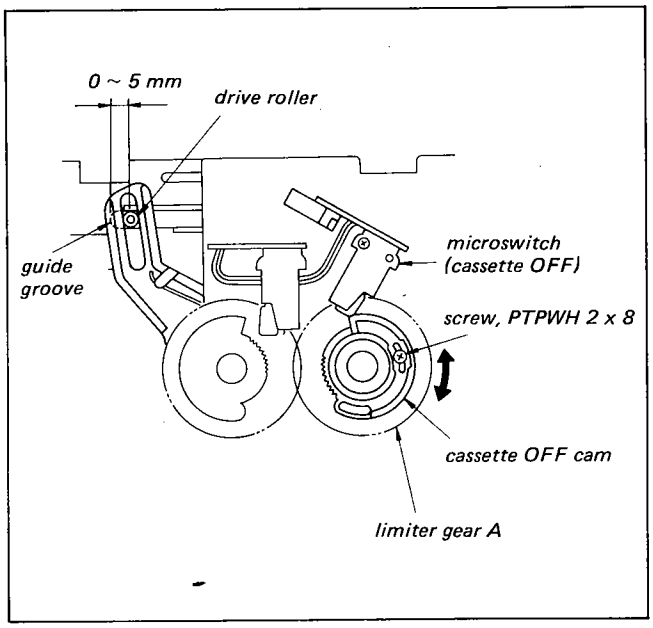

Fig. 3-13. Cassette OFF switch opration

3-7-3. Cassette ON Switch Operation Check and Adjustment

[Method of checking]

When inserting a cassette into the FL cassette compartment assembly, confirm that, as the cassette is inserted, the microswitch comes ON when the center of the drive roller is 10 to 15 mm from the end of the guide groove, as shown in Fig. 3-14. (A clicking sound can be heard after the switch is pressed.)

[Method of adjustment]

Loosen the screw that holds the cassette ON cam attached to the drive gear in place, then move the cassette ON cam in the direction of the arrow.

Adjust so that the cassette ON switch comes ON when the above distance is 10 to 15 mm, and finally tighten the screw.

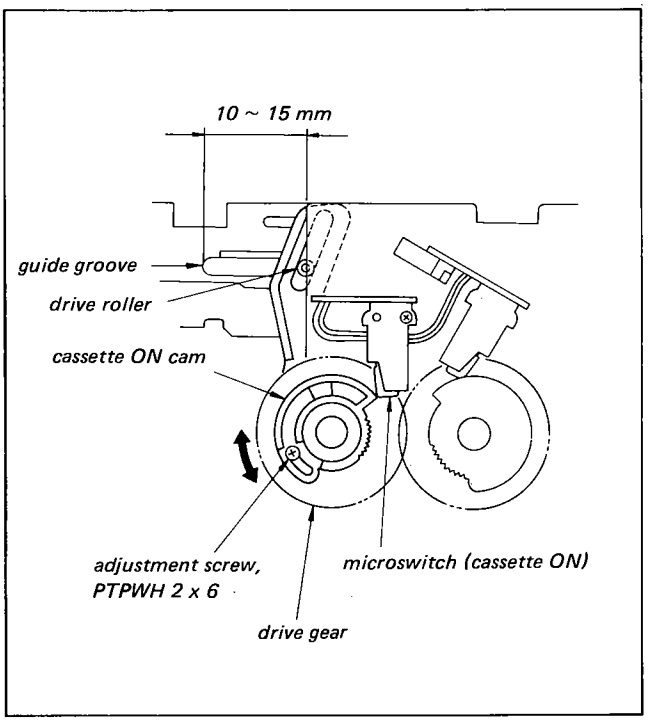

Fig. 3-14. Cassette ON switch operation check and adjustment

3-7-4. Checking and Adjustment of the Cassette Door Assembly

[Method of checking]

With the door opening and closing arm returned all the way in the direction of arrow Ⓐ, check to make sure that the upper and lower doors are vertical.

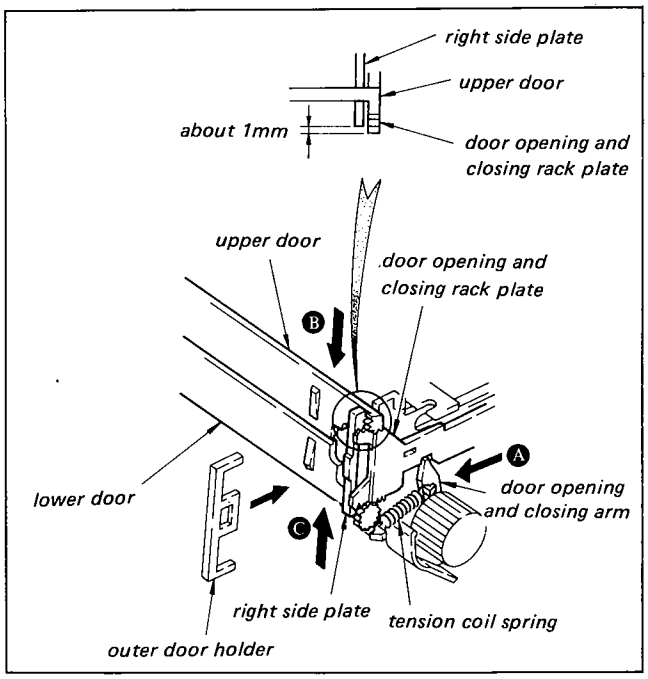

Fig. 3-15. Adjustment of the position of the cassette door assembly

[Method of adjustment]

Check to make sure that the door opening and closing rack plate has returned all the way. Then, with the tip of the door opening and closing rack plate and the tip of the right side plate about 1 mm apart, close the upper and lower doors together in the directions of arrows Ⓑ and Ⓒ so that they are vertical, and mesh the gears. Fit the outer door holder onto the right side plate, and fix the upper and lower doors in place.

3-7-5. Mounting the FL Cassette Compartment Assembly (Fig. 3-16)

❶ Hook the two claws of the FL cassette compartment assembly onto the mechanical chassis, then place the compartment in the specified position on the chassis.

❷ Loosely tighten the 5 mounting screws of the FL cassette compartment assembly. Move the FL cassette compartment assembly forward and backward with respect to the mechanical chassis, set it in the correct position, then tighten the mounting screws all the way.

❸ Connect the synchro belt (loading belt) between the threading motor and the worm gear, then hold it in place with the internal gear flange.

❹ Press the tension roller arm in the direction of the arrow to adjust the tension of the synchro belt (loading belt), then fix it in place with the arm fixing screw.

❺ Insert the harness sticking out from the main body into connector CN301 on CS-3 board.

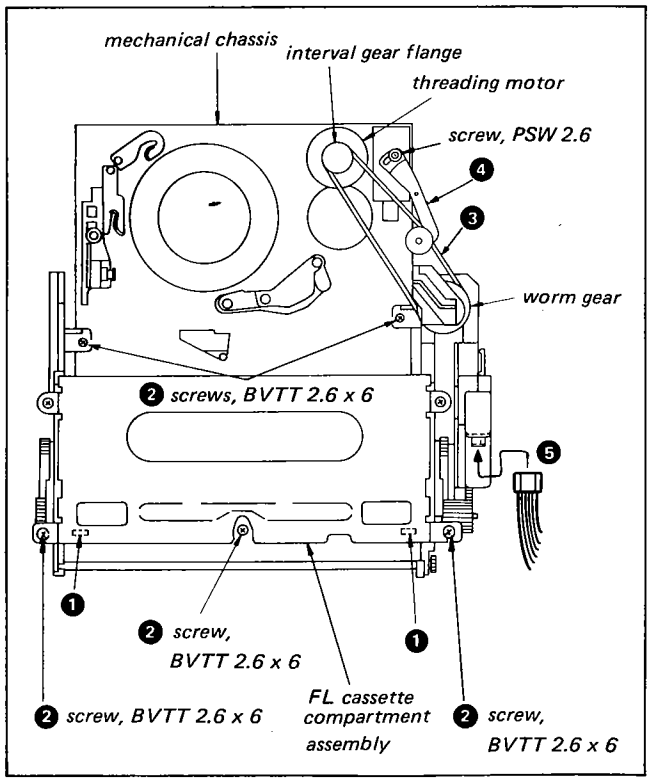

Fig. 3-16. Mounting the FL cassette compartment assembly

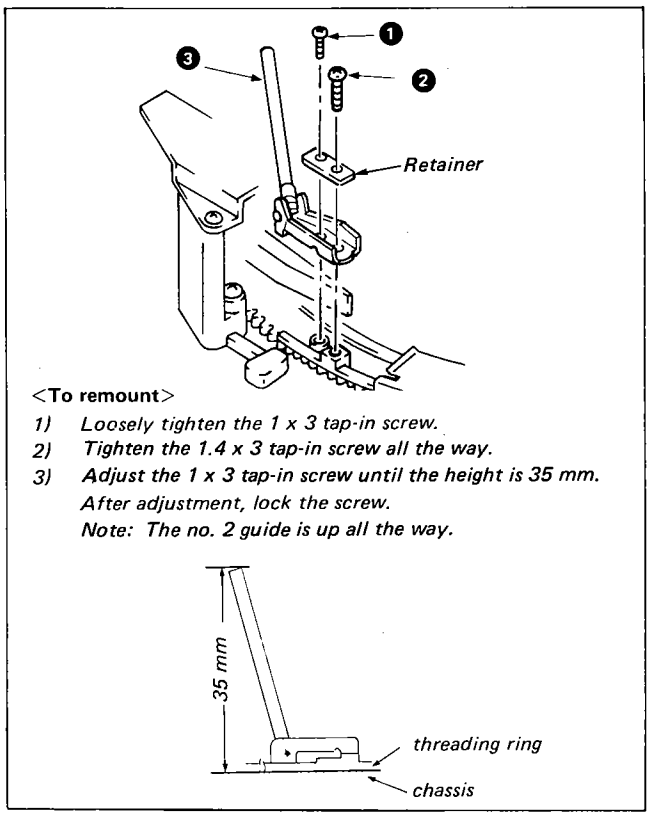
3-8. REMOVAL OF THE No. 2 AND No. 3 GUIDES

3-8-1. Removal of the No. 2 Guide

❶ Remove the 1×3 tap-in screw.
❷ Remove the 1.4×3 tap-in screw.
❸ Remove the No. 2 guide assembly.



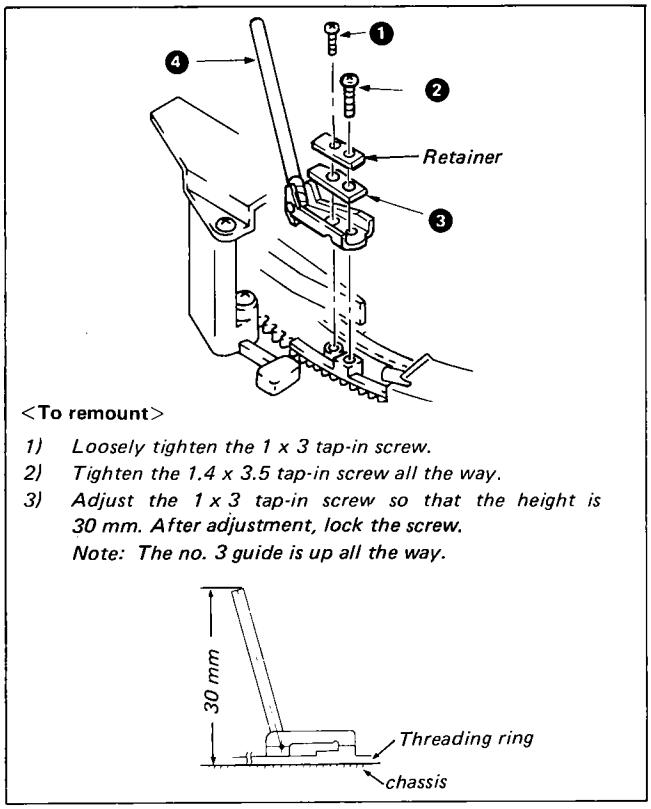
<To remount>

1) Loosely tighten the 1 x 3 tap-in screw.
2) Tighten the 1.4 x 3 tap-in screw all the way.
3) Adjust the 1 x 3 tap-in screw until the height is 35 mm. After adjustment, lock the screw.
Note: The no. 2 guide is up all the way.

Fig. 3-17. Removal of the no. 2 guide

3-8-2. Removal of the No. 3 Guide

❶ Remove the 1×3 tap-in screw.
❷ Remove the 1.4×3.5 tap-in screw.
❸ Remove the limiter spring.
❹ Remove the No. 3 guide assembly.



<To remount>

1) Loosely tighten the 1 x 3 tap-in screw.
2) Tighten the 1.4 x 3.5 tap-in screw all the way.
3) Adjust the 1 x 3 tap-in screw so that the height is 30 mm. After adjustment, lock the screw.
Note: The no. 3 guide is up all the way.

Fig. 3-18. Removal of the no. 3 guide

3-9. REPLACEMENT AND ADJUSTMENT OF THE S THREADING RING

3-9-1. Preparation to Remove the S Threading Ring Removal of the ACE Assembly, FE Head and Threading Motor (Fig. 3-19)

❶ Remove the cross-recessed head screw.
❷ Remove the No. 6 guide nut.
❸ Remove the No. 6 washer.
❹ Remove the No. 6 guide spacer.
❺ Remove the compression coil spring.
❻ Remove the 2 guide adjustment nuts, then remove the ACE assembly and the FE head.

Note:
Since the ACE assembly and the FE head are connected by a lead wire, be careful when removing them. It is not necessary to remove the compression coil spring below the ACE assembly, but be careful not to use it.

❼ Remove the 2 PSW2.6 screws, then remove the stopper arm section.
❽ Remove the 2 screws, then remove the threading motor assembly by pulling it up and out.

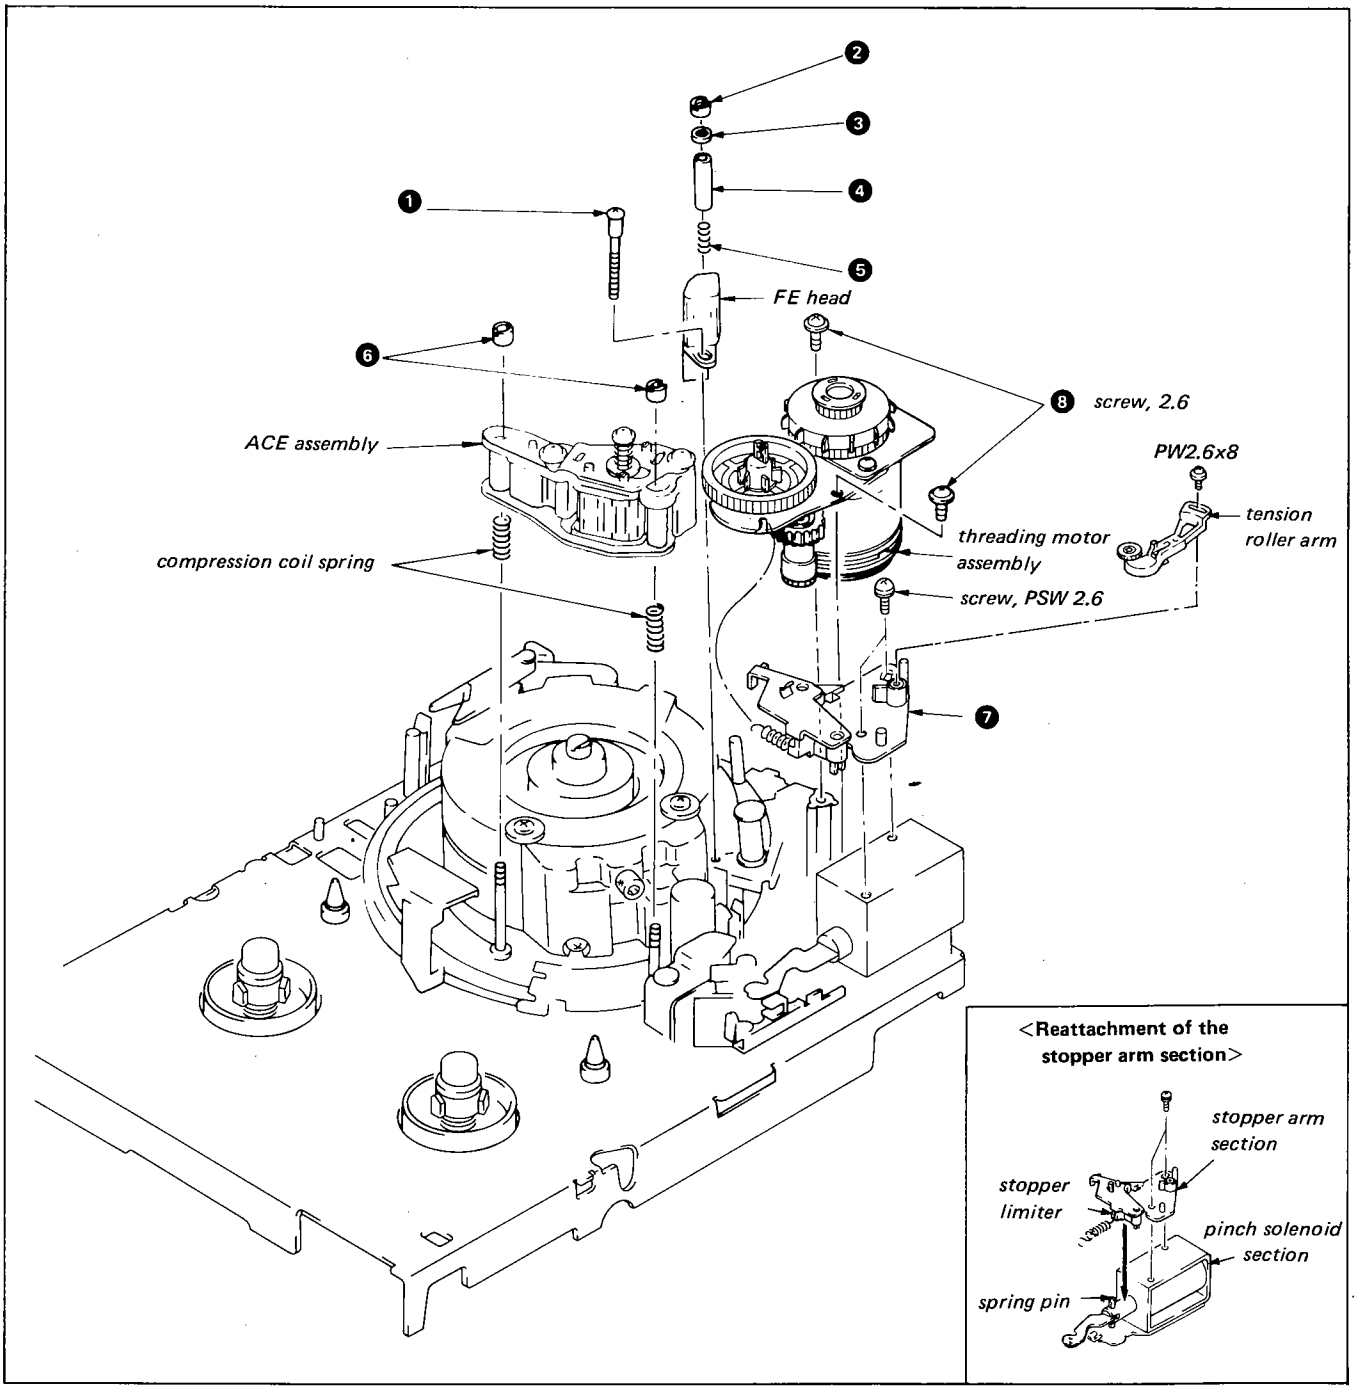


Fig. 3-19. Removal of the ACE assembly, FE head and threading motor.

Removal of Miscellaneous Parts (Fig. 3-20)

Proceeding in the same manner as in replacement of the drum assembly, measure the width of the gap between the upper drum and the adjusting plates (Fig. 3-5).

1. Remove the screw, then remove the tape guide ground plate and adjusting plates 1 and 2.
2. Remove the two screws, then remove the tape holder assembly.
3. Remove the screw, then remove the guide plate.
4. Remove the 2 PTPWH2×8 screws and the 2.6×24 screw, then remove shuttle guide II.
5. Remove the 3 PTPWH2×8 screws and the 2.6×24 screw. Then remove the 2 claws holding shuttle guide I in place, and finally remove shuttle guide I.
6. Remove the slant base assembly.
7. Remove the BVTT2.6×6 screw, then remove the pinch liner link.

Note:

After removing the guide plate, do not thread or unthread a tape with the shuttle guide mounted.

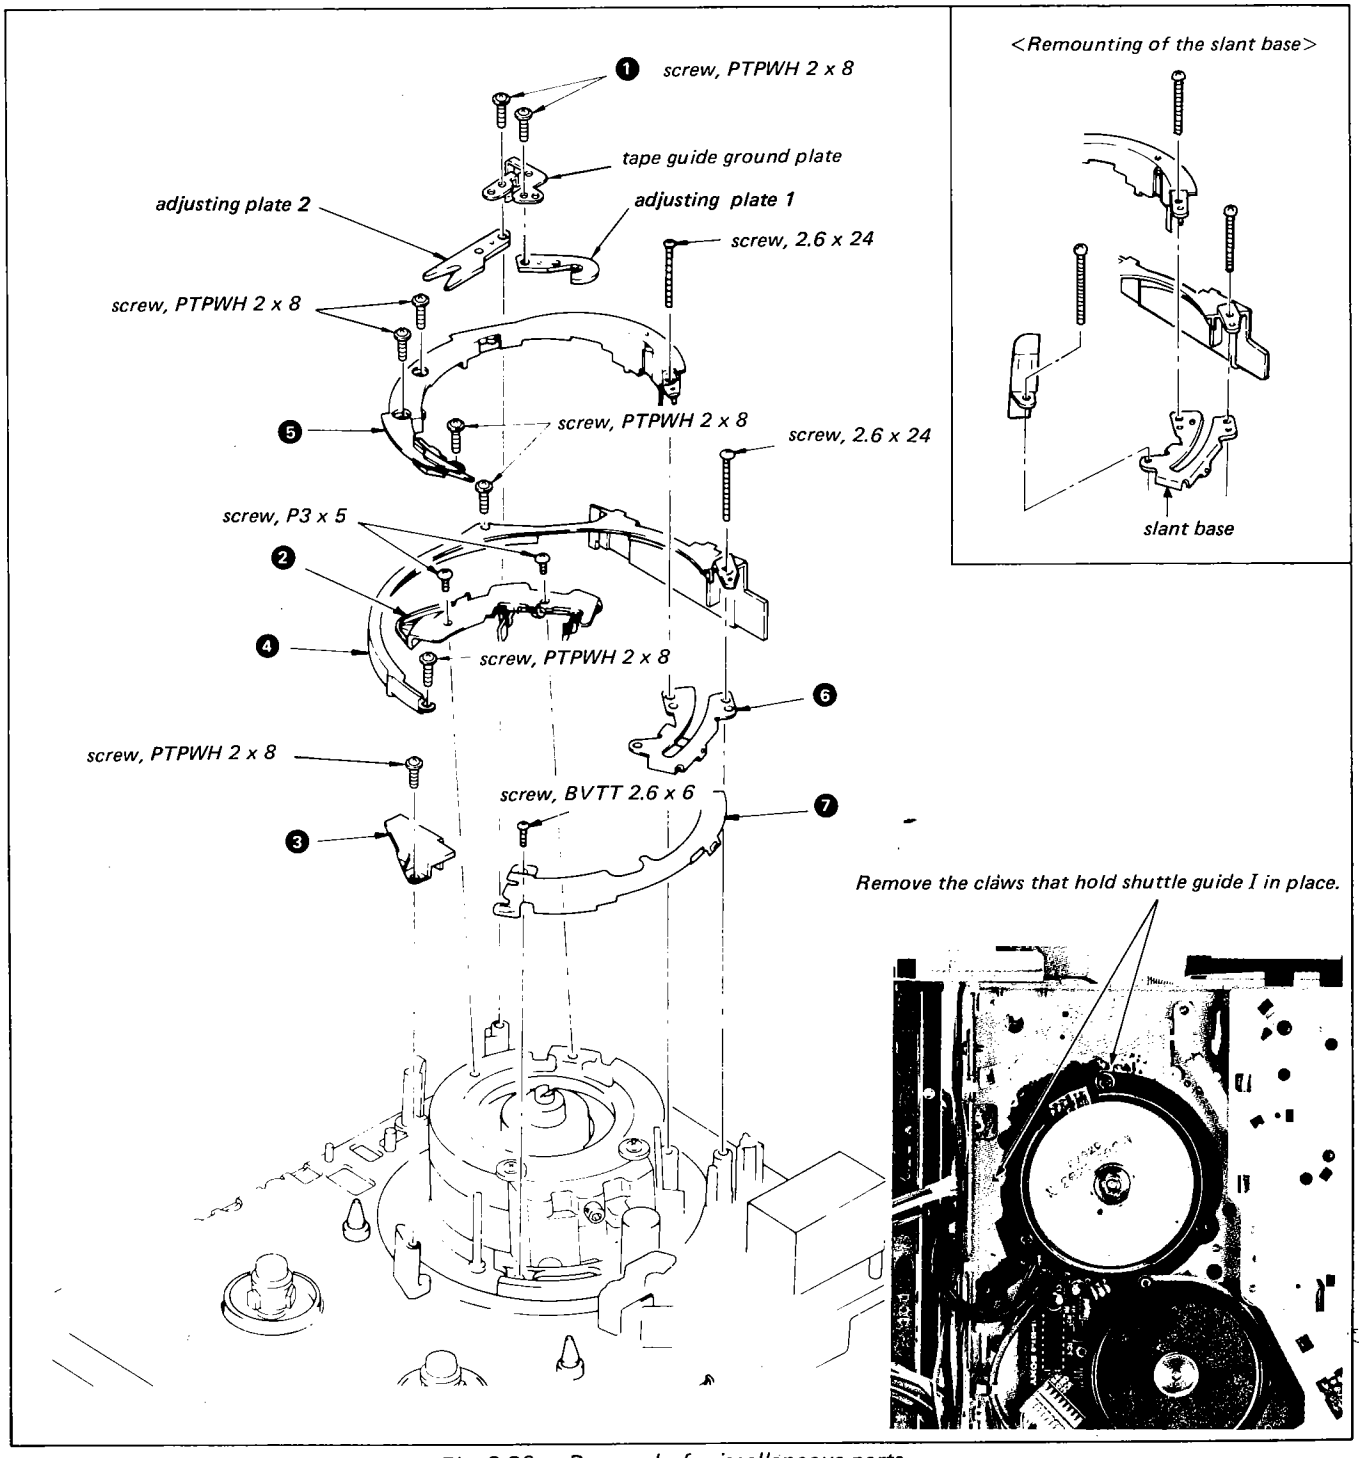

Fig. 3-20. Removal of miscellaneous parts

3-9-2. Removal of the S Threading Ring (Fig. 3-21)

❶ Remove the tension coil spring from the lock arm assembly (refer to Fig. 3-26 in section 3-11-1).
❷ Turn the stop washer and remove the ring roller (B).
❸ Remove the group of parts in the unthreading end switch (for instructions on assembly and disassembly, refer to section 3-11-2 and Fig. 3-30).
❹ Remove the screw, then remove the ring roller adjustment plate.
❺ Remove the S threading ring.

Note:
Once a stop washer has been removed, do not use it again.

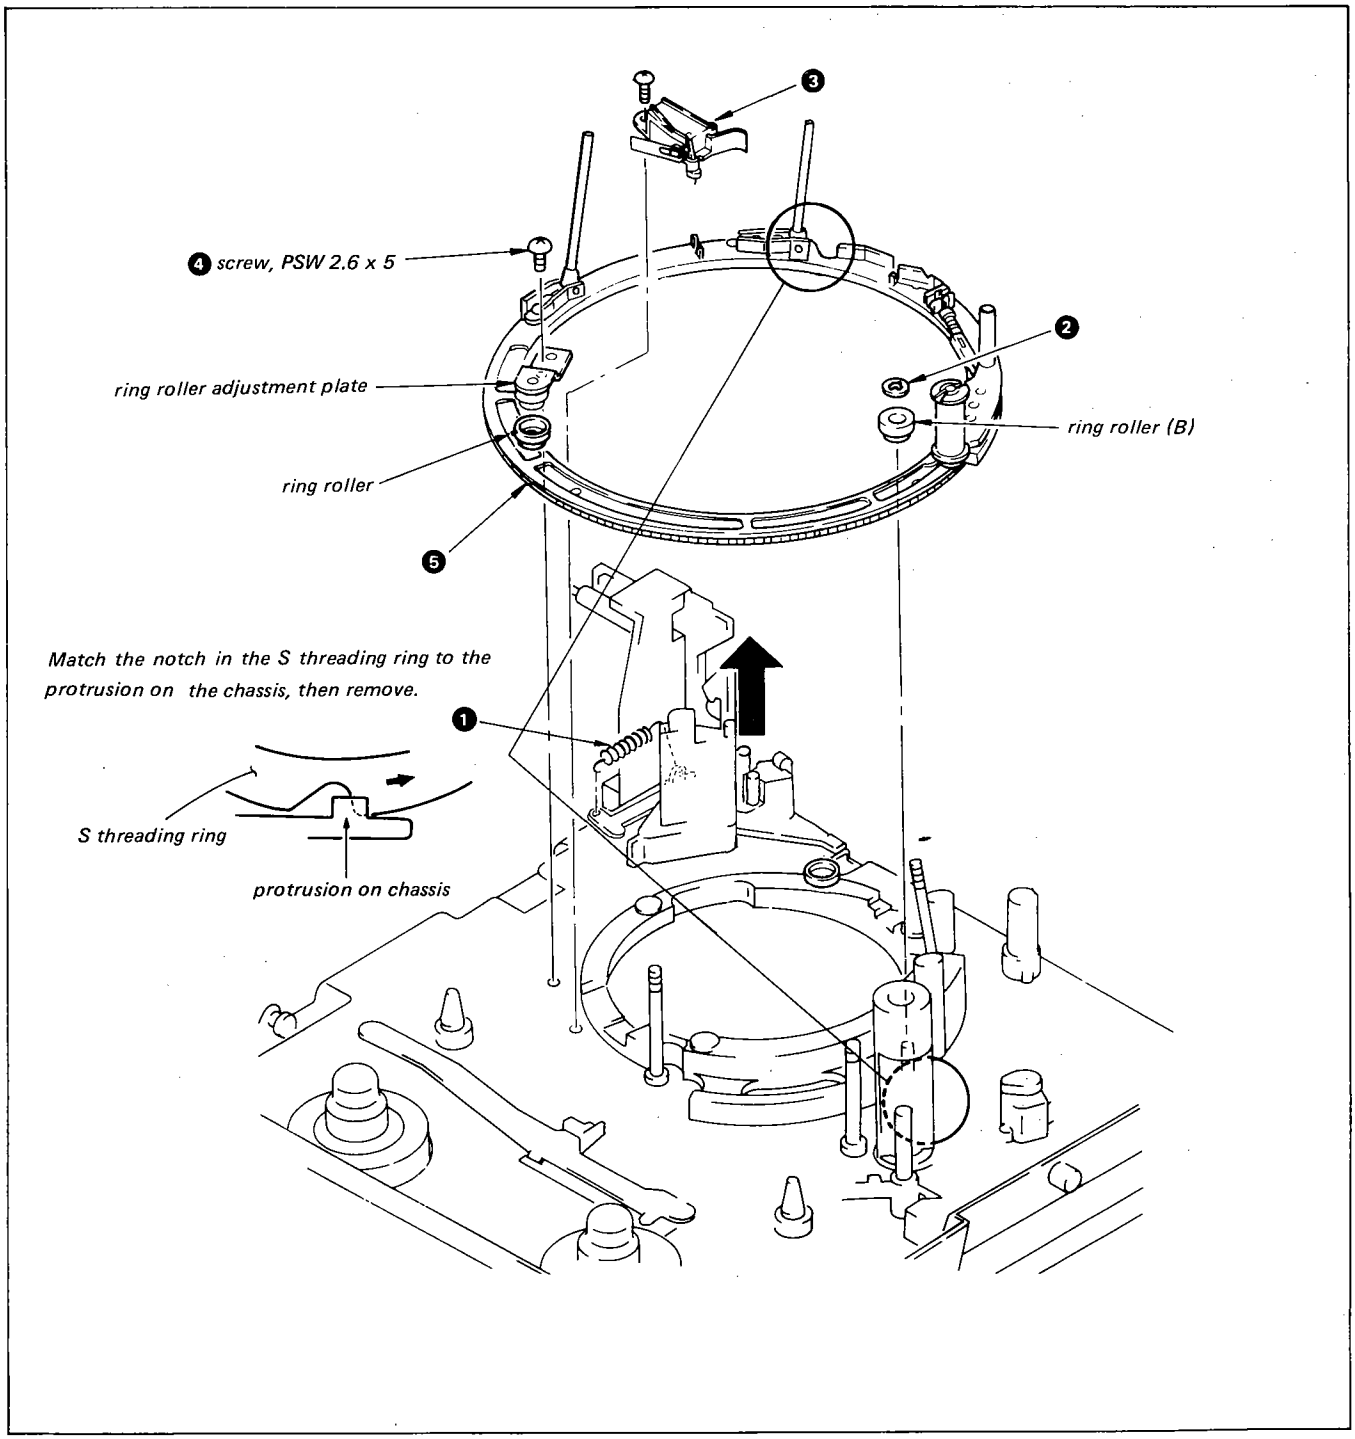

Fig. 3-21. Removal of the S threading ring

3-9-3. Slider-Stopper Mounting Check (Fig. 3-22)

❶ Confirm that the parts of the drive gear are fixed in place.

❷ Loosen the screw, insert a spacer of thickness 0.2 mm between the slider gear assembly and the slider stopper, and tighten the screw while pressing down in the direction of both arrows Ⓐ and Ⓑ.

Note:

It is absolutely necessary to press down in the direction of arrow (A) in order to eliminate play. When the screw is tightened, the slide stopper tends to turn in the direction of arrow (a), so it should be held in place with an ordinary screwdriver while tightening the screw.

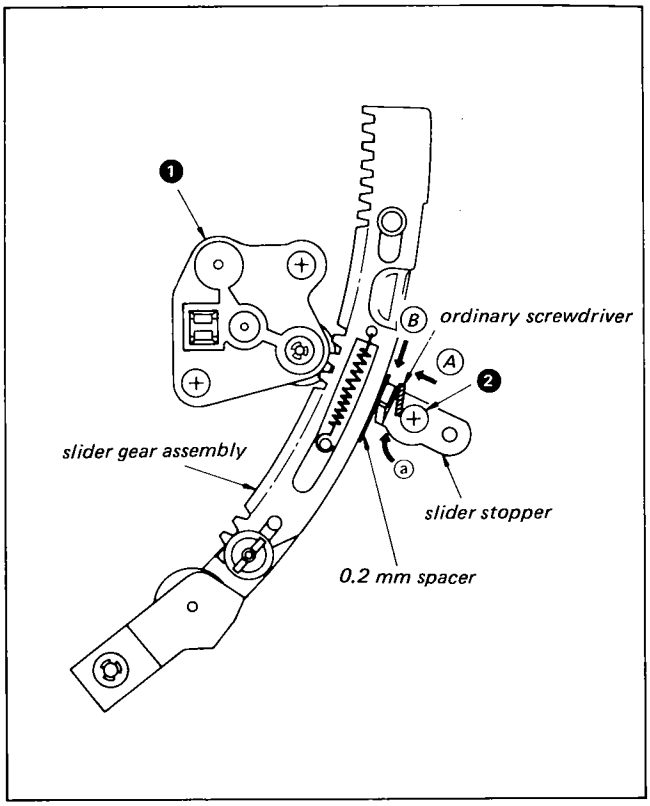

Fig. 3-22. Mounting the slider-stopper

3-9-4. S Threading Ring Mounting and Position Adjustment (Fig. 3-23)

❶ Set the slider gear assembly in the unthreading completed position.
(Insert a spacer of thickness 0.5 mm between the slider stopper and slider gear, and set so that it is up against part Ⓐ.)

❷ In this condition, fit the threading ring into place, match the chassis hole (3ϕ) of part Ⓑ with the S threading ring hole (1.5ϕ), and mesh with the drive gear teeth.

❸ Attach ring roller (B) and fix in place with a stop washer.

❹ Attach the ring roller, and fix in place with the adjustment plate.

Note:

After replacement and mounting are completed, adjust the ACE assembly as explained in the section on tape path adjustment.

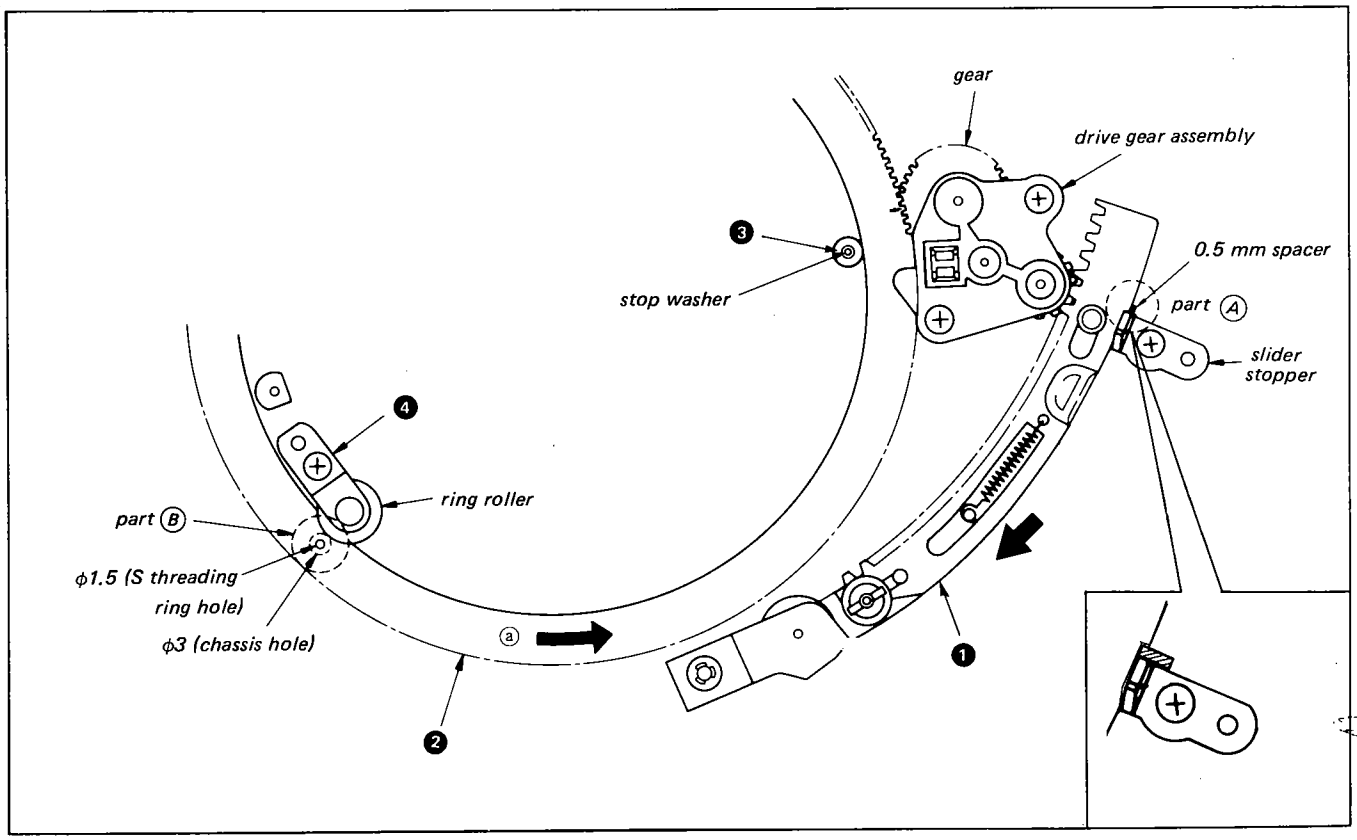

Fig. 3-23. S threading ring position adjustment

3-10. PINCH SNAP-FIT LIMITER GAP CHECK AND ADJUSTMENT

[Method of checking]

1) Set in the threading completed condition.
2) With the plunger pushed in all the way, confirm that the thickness of the pinch snap-fit limiter gap is 0.4 mm to 0.6 mm. If it is not, adjust as explained under [method of adjustment] below.

[Method of adjustment]

❶ With the pinch solenoid in the absorbed condition (when the plunger is pushed in all the way), loosen the adjustment screw.

❷ Press the pinch limiter adjustment plate in the direction of arrow ⓐ with an ordinary screwdriver, as in section Ⓐ in the diagram, and adjust until the thickness of the gap in 0.4 mm to 0.6 mm.
Tighten the adjustment screw and then lock it to fix everything in place.

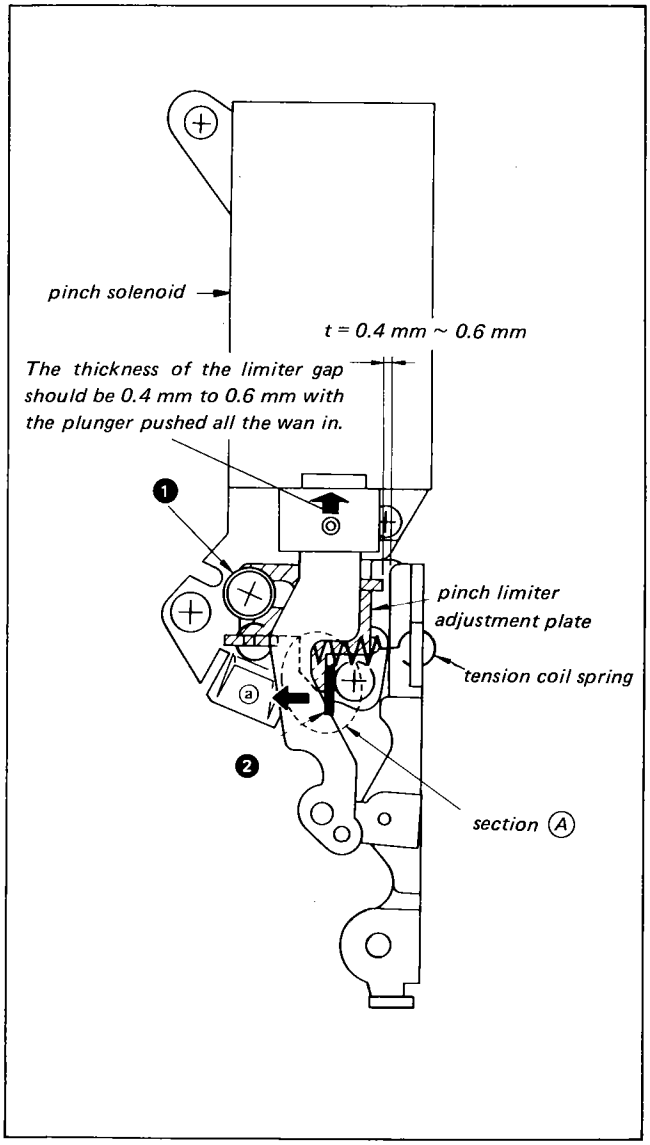

Fig. 3-24. Pinch snap-fit limiter gap adjustment plate

3-11. MICROSWITCH POSITION CHECK AND ADJUSTMENT

3-11-1. Threading End Switch (TE Switch) Position Check and Adjustment

[Method of checking]

Turn the S threading ring manually. Check to make sure that, when the lock roller moves from above the straight line part of the notch in the ring (Fig. 3-25 section Ⓐ) to 2/3 of the way down it and back, the TE switch turns ON and OFF. This can be confirmed from the clicking sound.
If the lock roller has to move outside of this range before the switch will turn ON and OFF, adjust as explained below.

[Method of adjustment]

1) Set the lock roller between the top of the notch in the S threading ring and 2/3 of the way down it, turn the cam shaft in the direction of the arrow with an ordinary screwdriver and, when the switch turns ON (with a clicking sound), fix the cam shaft in place.
2) When the adjustment is completed, repeat the check as described under [method of checking].

[Removal]

❶ Remove the tension coil spring that is attached to the lock arm assembly.
❷ Remove the screw, then remove the TE switch assembly.
❸ Press the claws holding the main chassis assembly in place in the direction of arrow Ⓐ to release the lock, then remove the lock arm assembly.

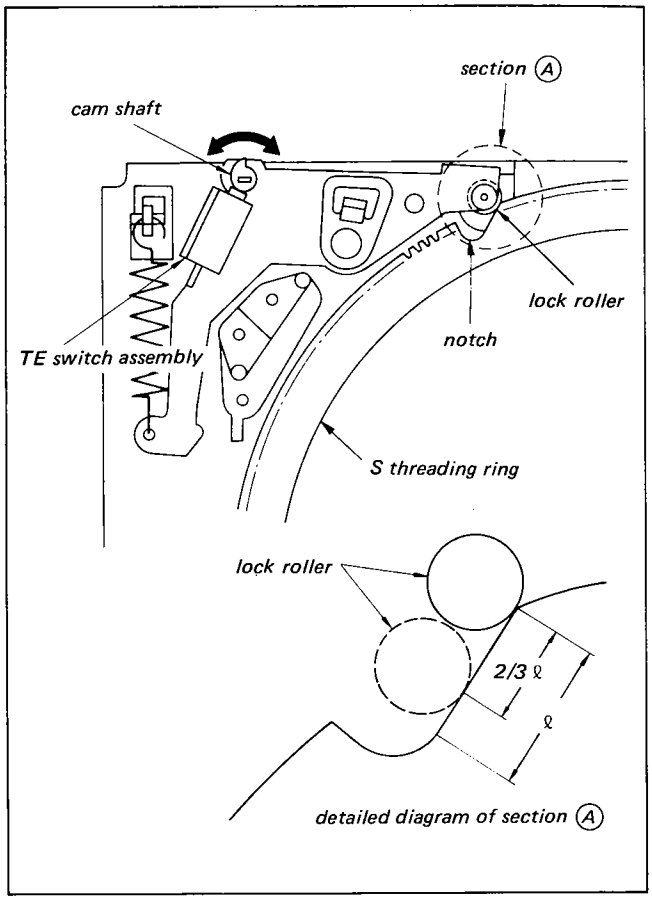

Fig. 3-25. TE switch position adjustment

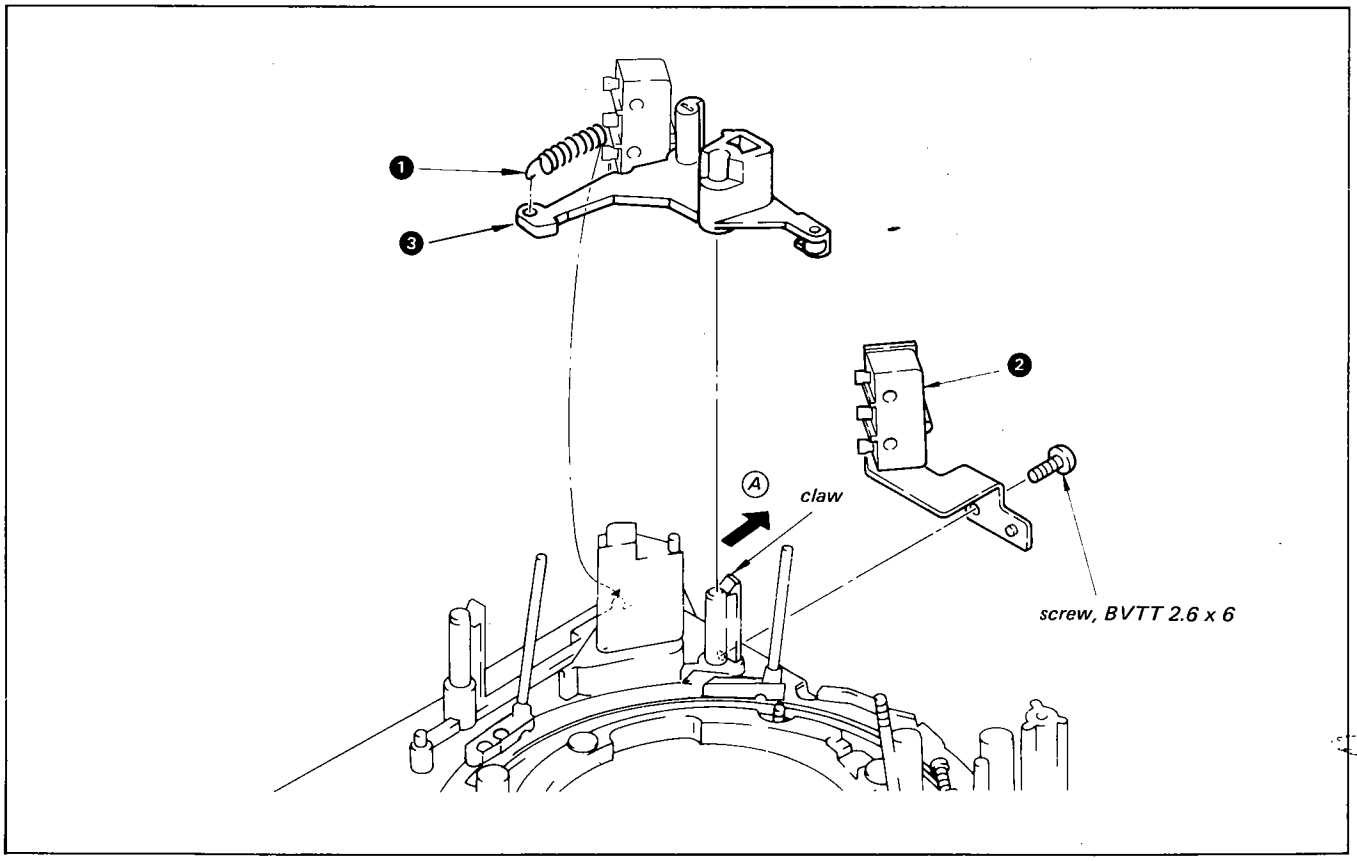

Fig. 3-26. Removal of the TE switch assembly and lock arm assembly

3-11-2. Unthreading End Switch (UTE Switch) Position Check and Adjustment

[Method of checking]

Turn the S threading ring manually until the UTE switch roller of the UTE switch arm assembly drops into the UTE switch arm groove. Confirm that when a ϕ1.2 pin is inserted into section Ⓐ in Fig. 3-27, the switch comes ON, and that when a ϕ0.6 pin is inserted the switch does not come ON.

[Method of adjustment]

1) If the switch fails to come ON when a ϕ1.2 pin is inserted, loosen small screw ❶ and adjust by turning a little at a time in the direction of arrow Ⓑ.
2) If the switch comes ON when a ϕ0.6 pin is serted, it is possible that the actuator is bent as shown Fig. 3-28. Check it and straighten it out if necessary.

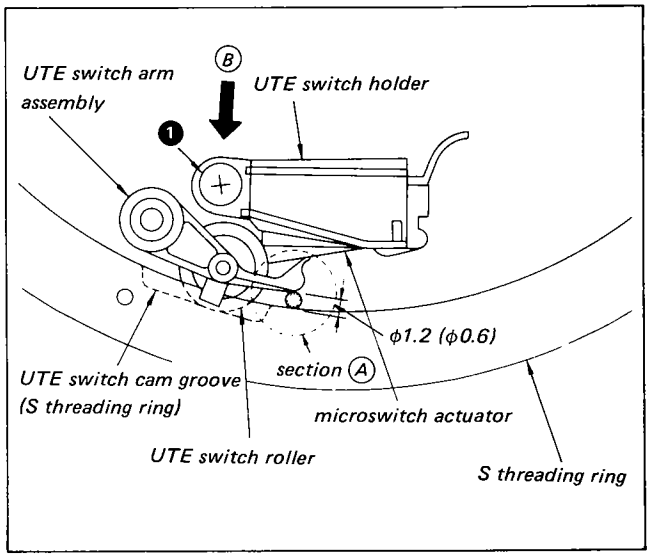

Fig. 3-27. UTE switch position adjustment

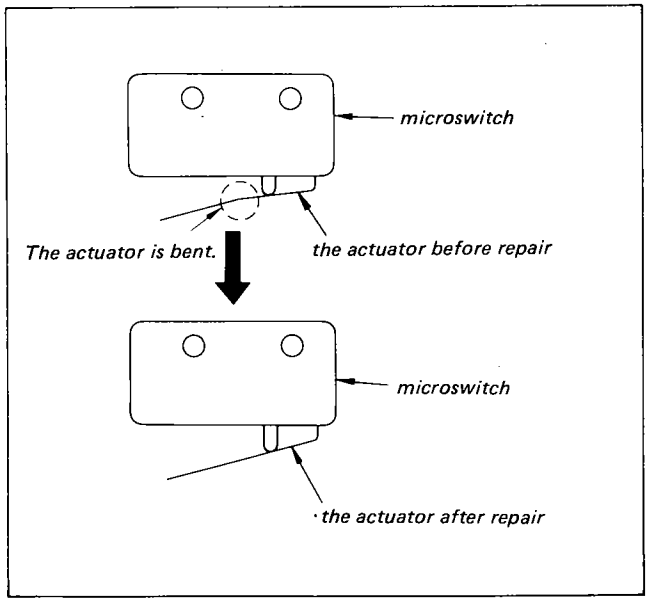

Fig. 3-28. Repair of the actuator

Note:

The ϕ1.2 and ϕ0.6 pins must be inserted in the right place, as shown in Fig. 3-29 (as shown in Fig. 3-29, depending on where the pin is inserted, because of the structure of the assembly even if it enters at 1.2 mm the gap can be less than 1.2 mm farther in).

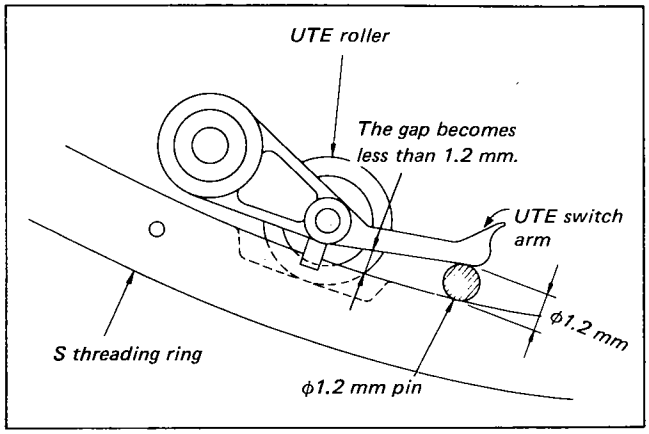

Fig. 3-29. Position of the pin when checking

[How to remove]

❶ Remove the screw, as shown in Fig. 3-30.
❷ Remove the claw of the switch from the chassis, and then remove the main body of the switch while holding the actuator in the ON position.

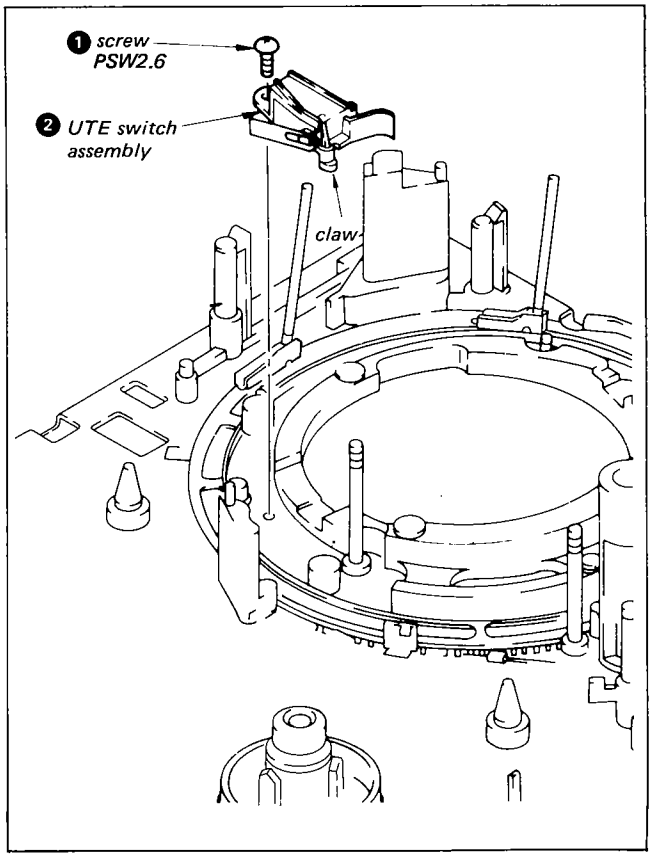

Fig. 3-30. Removal of the UTE switch

3-12. REMOVAL AND ADJUSTMENT OF THE REEL MOTOR SECTION

3-12-1. Removal of the Reel Motor Section

❶ Turn the upper panel upside down.
❷ Remove the four screws (tapping B2.6×8).
❸ Remove the counter belt.
❹ Remove the reel Ass'y.

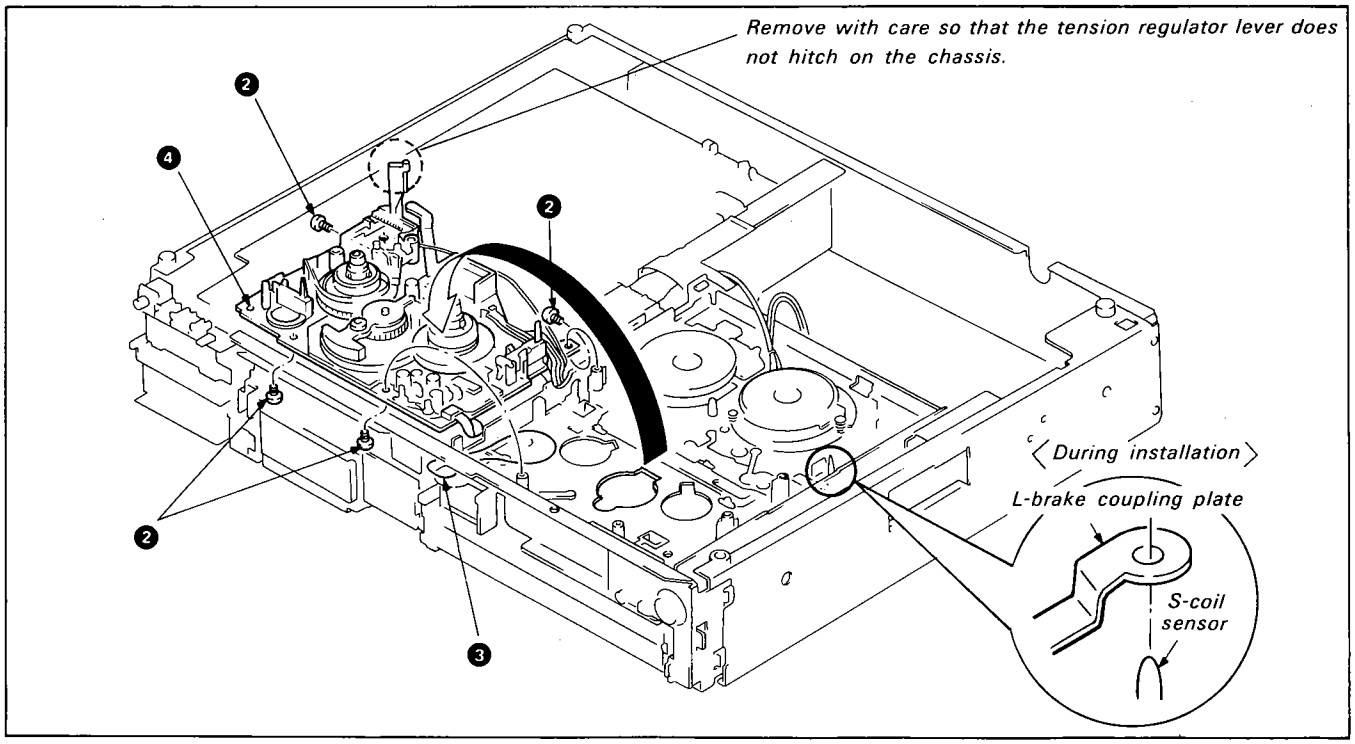

Fig. 3-31. Removal of the reel motor section

3-12-2. Adjustment of the Brake Plunger

1) Loosen the brake plunger fixing screw.
2) More the brake plunger in the direction of the arrow, and tighten the fixing screw just enough so that the plunger can move through a stroke of 2 mm.
Note:
The plunger should be 2 mm away from contact with the T brake.

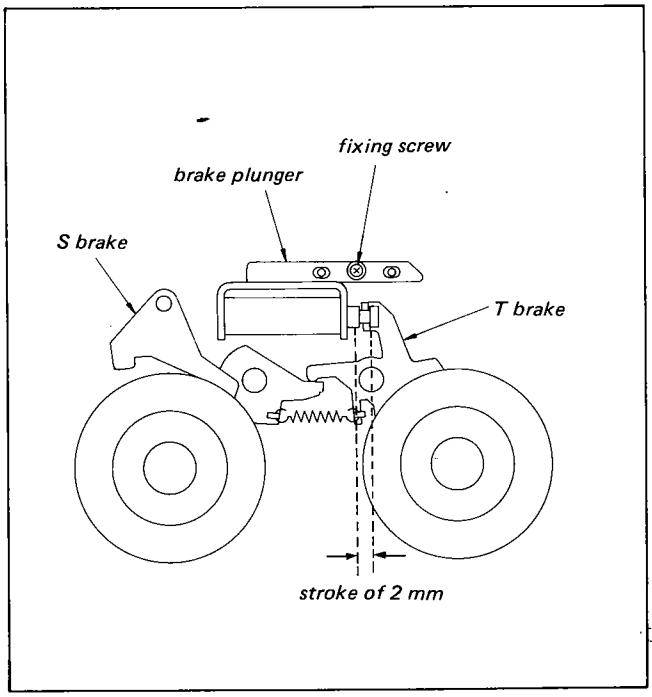

Fig. 3-32. Adjustment of the position of the brake plunger

3-12-3. Adjustment of the Soft Brake

[Method of checking]

1) Remove the cassette compartment section, and put the unit in the threaded state without a cassette.
2) As shown in Fig. 3-33, set a tension gauge (SL-0011) on the S reel platform.
3) Set the unit in fast forward mode (put the S reel platform in the free condition), and pull the sector type gauge slowly.
4) Confirm that the reading of the sector type gauge is 8g.

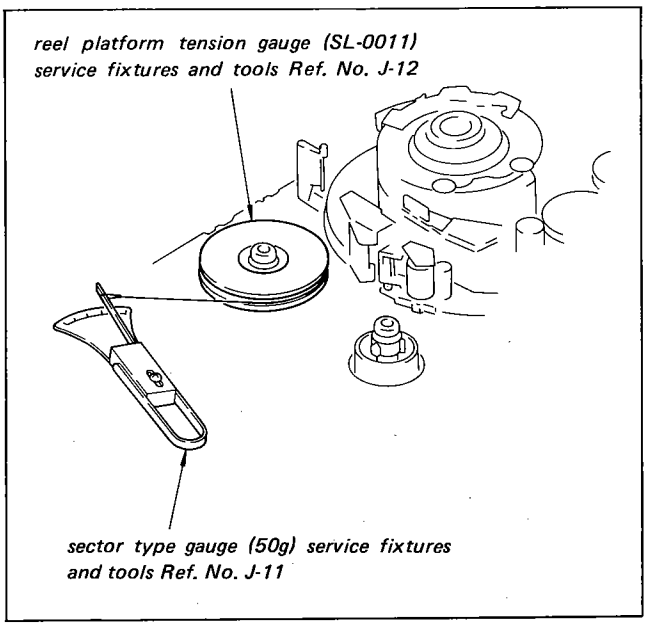

Fig. 3-33. How to check the soft brake

[Method of adjustment]

1) Adjust the position of the soft brake lever tension coil spring.

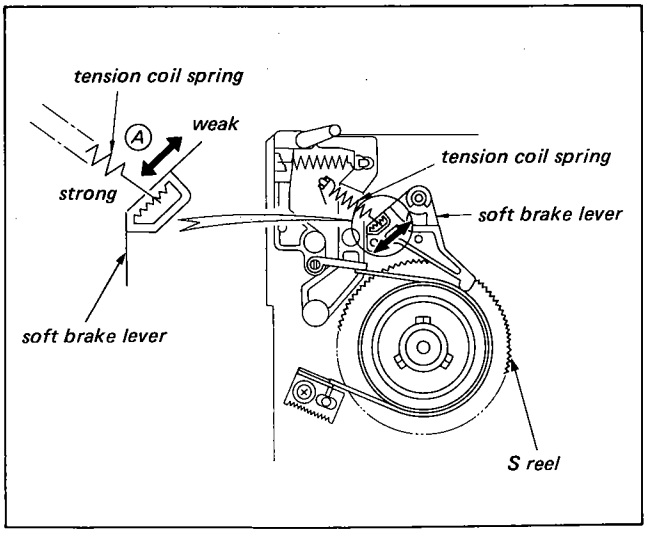

Fig. 3-34. Adjustment of the soft brake

3-12-4. Adjustment of the Position of the Tension Regulating Lever

[Method of adjustment]

1) Put the unit in playback mode.
2) Loosen the adjustment spring until the tape guide pin of the tension regulating lever assembly is positioned to the outside of the outer circumference of shuttle guide 2, as shown in Fig. 3-35. Then adjust by moving the tension regulating band assembly in the direction of arrow Ⓐ .
3) After adjustment, tighten the adjustment screw, being careful that the tension regulating band assembly does not move.

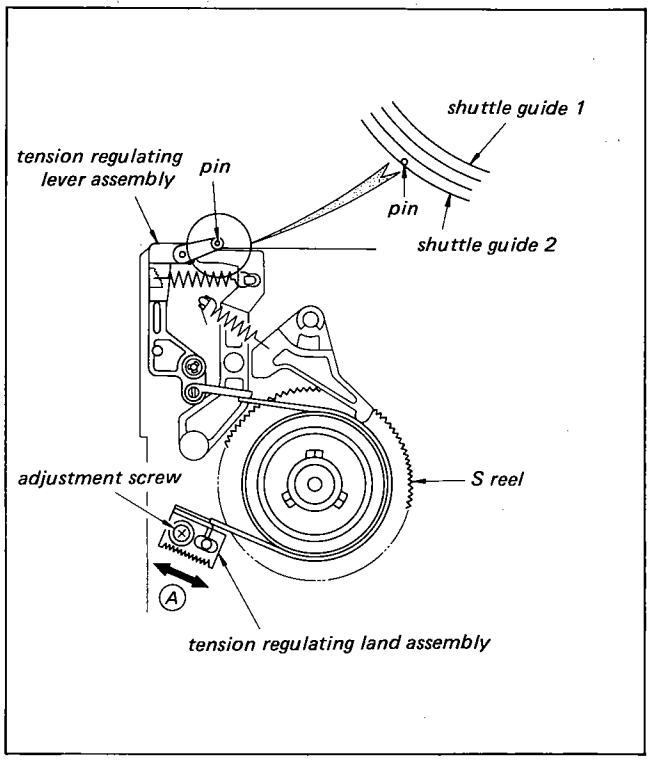

Fig. 3-35. Adjustment of the position of the tension regulating lever

3-13. ADJUSTMENT OF THE FORWARD AND BACK TENSION

[Method of measurement]

1) Connect TP601 and TP602 to short them and stop the rotation detection.
2) Insert the torque cassette (SL-0003C) and put the unit in playback mode.
3) Read the value on the meter on the S reel side after the needle has gone around about once.
   The correct value is 30 g · cm ± 5 g · cm.

Notes:

i) The set must be perfectly level during this measurement.

ii) After the measurement, the tape can become slack when the stop button is pressed. If this happens set the unit is forward mode to take up the slack before removing the tape.

[Method of adjustment]

Move the position of the tension coil spring that is hooked on the tension regulating lever assembly in the direction of arrow Ⓐ until the measured value falls within the correct range.

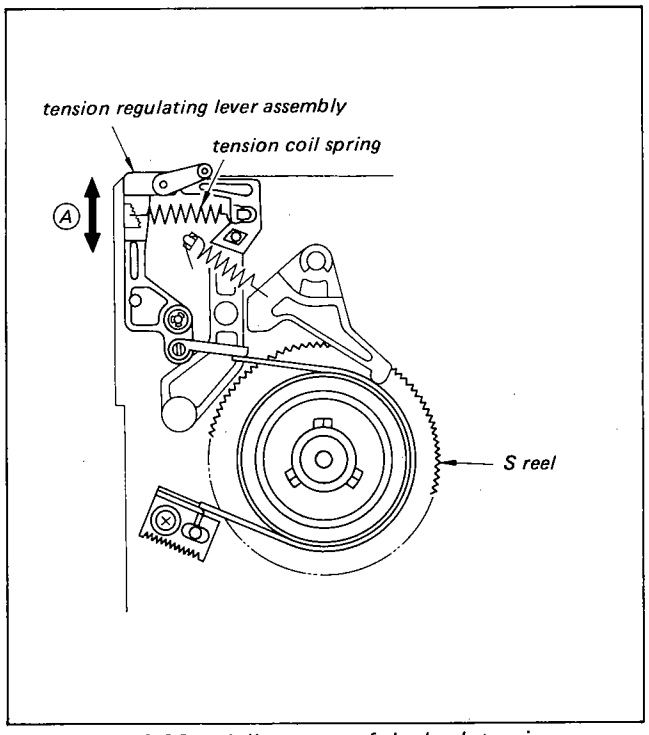

Fig. 3-36. Adjustment of the back tension

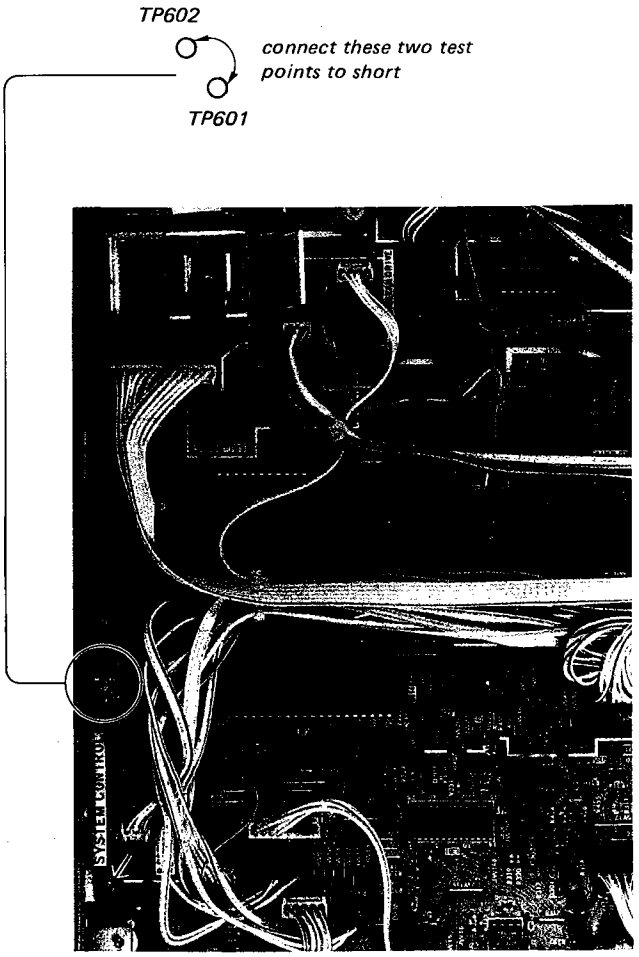

Fig. 3-37.

3-14. ADJUSTMENT OF THE FORWARD TORQUE

[Method of measurement]

1) Connect TP601 and TP602, on both ends of R608, to short them and stop the rotation detection.
2) Insert the torque cassette (SL-0003C) and start to record a telecast in βII mode.
3) Read the value on the meter on the T reel side after the needle has gone around about once. The correct range is 80 g • cm ± 5 g • cm.

[Method of adjustment]

1) Remove the front panel.
2) Turn potentiometer RV202 on FS-21 board to adjust the torque until its value falls within the correct range.

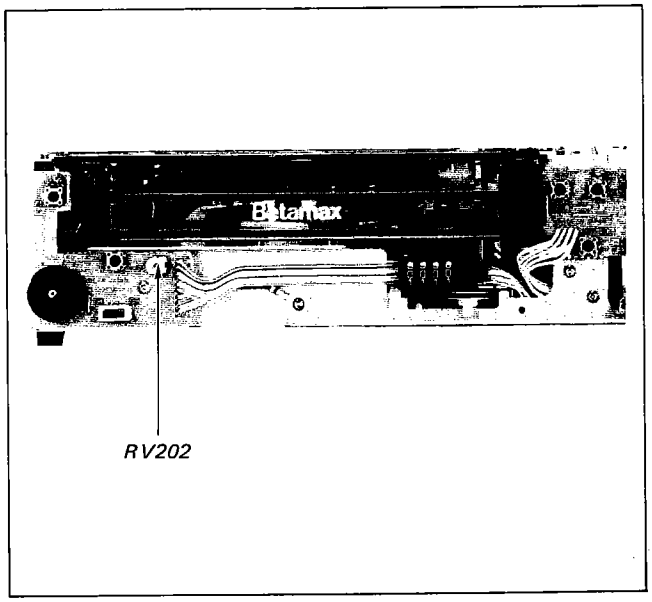

Fig. 3-38.

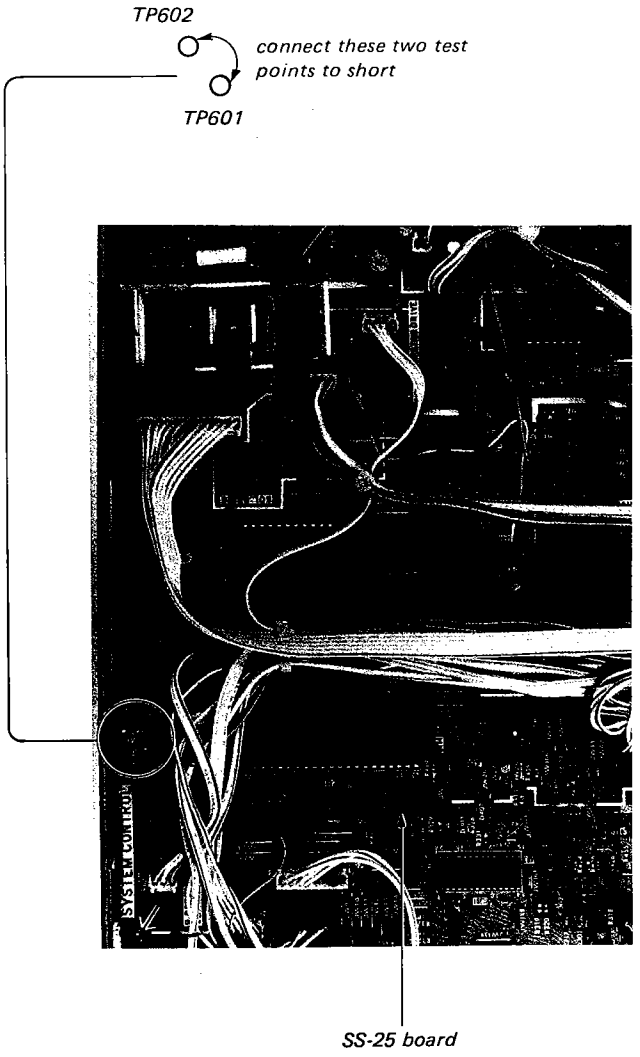

Fig. 3-39.

SECTION 4
TAPE PATH ADJUSTMENT

4-1. TRACKING ADJUSTMENT

This adjustment has a large effect on the picture quality in each mode and on the interchangeability of tapes, so it should be done carefully.

4-1-1. Preparation for adjustment
4-1-2. Adjustment on the entrance side
4-1-3. Adjustment on the exit side

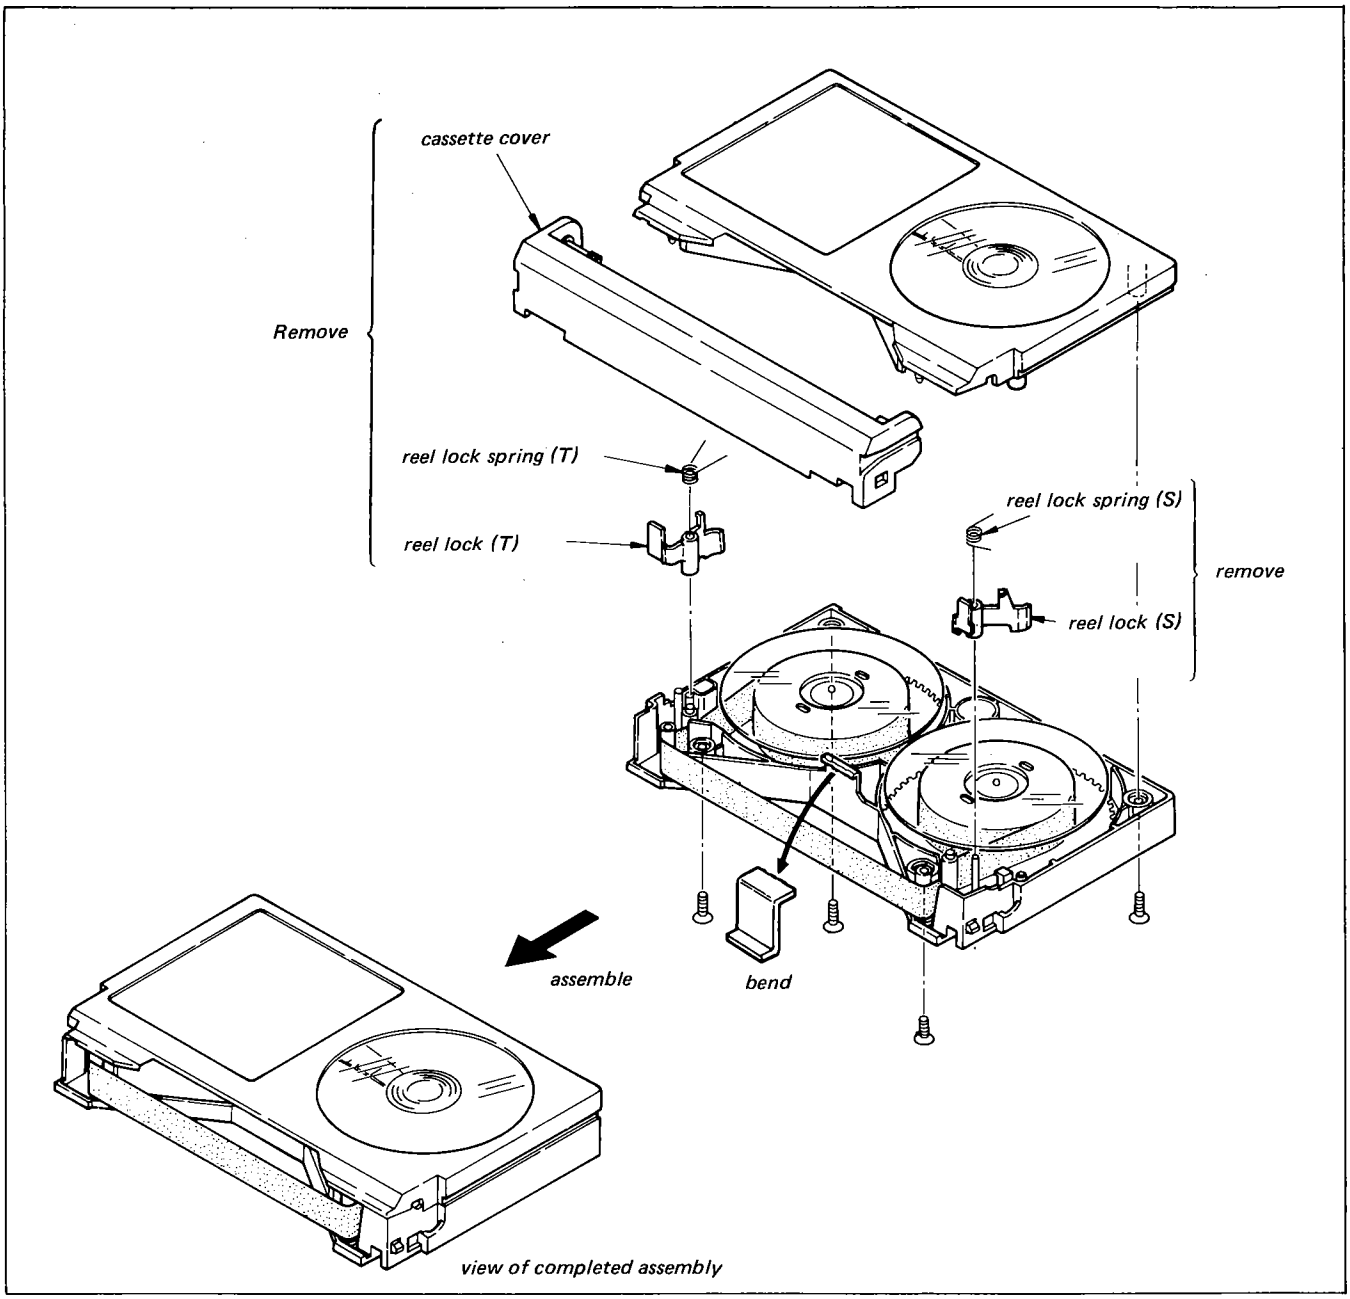

Fig. 4-1.

4-1-1. Preparation for Adjustment

1) Remove the cassette cover of the alignment tape in accordance with Fig. 4-1.
2) Clean the surfaces contacted by the traveling tape (tape guide, drum tape traveling surface, capstan shaft, pich roller, ACE.FE head surface) with a chamois cloth dipped in methanol.
3) Connect the oscilloscope as follows:
   channel 1: CN3-pin ⑤ (RP-8 board)
   external trigger: CN3-pin ③ (RP-8 board)
4) Play back the 1 kHz signal on the tracking section of the alignment tape.
5) Confirm that the oscilloscope radio frequency output waveform is flat and that the amplitude is a maximum. (Turn the tracking knob right and left to increase and decrease the amplitude while the waveform remains flat. When the amplitude of the waveform is a maximum, confirm that the fluctuations and contact of the radio frequency output waveform meet the standards given in Fig. 4-2. If they do not, go through the procedure given in step 6).
6) If the entrance waveform cannot be made flat, as shown in Fig. 4-3 (a), by turning the tracking knob, go through the "entrance side adjustment" described in 4-1-2; if the exit waveform shown in Fig. 4-3 (b) cannot be made flat, go through the "exit side adjustment" in 4-1-3.

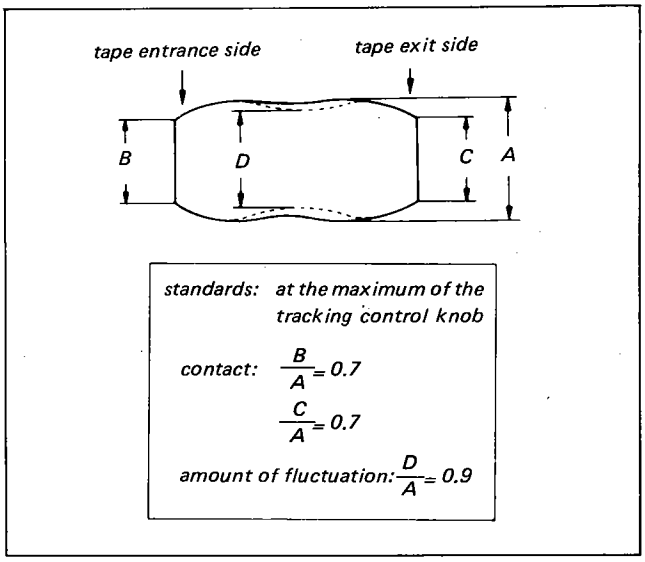

Fig. 4-2.

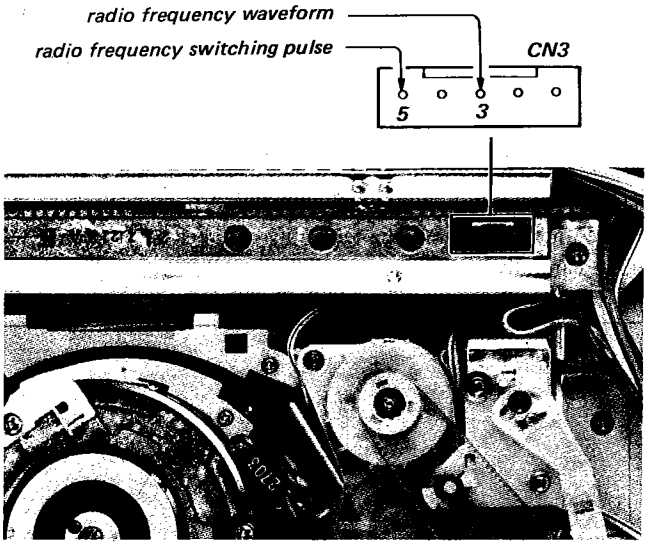

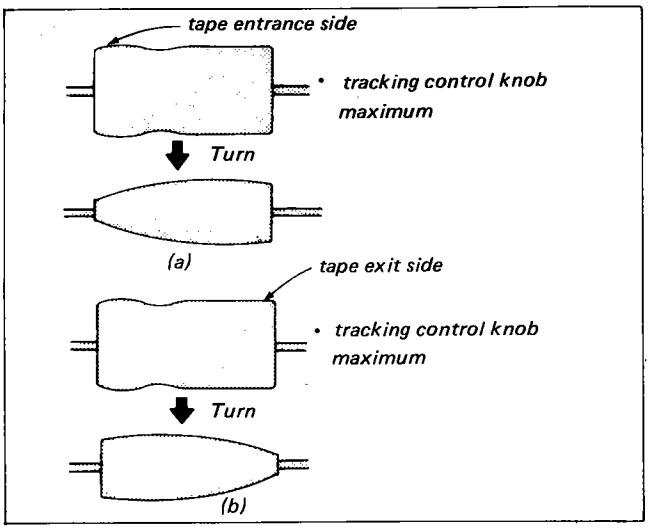

Fig. 4-3.

4-1-2. Entrance Side Adjustment

Whenever the entrance side adjustment is performed, the exit side adjustment must also be performed. The various tape guides and adjustment positions are shown in Fig. 4-5.

1) Turn the No. 6 guide counterclockwise to free the movement of the tape as it enters the drum.
2) Turn the tracking control knob until the amplitude of the waveform is about 60% of its maximum.
3) Loosen No. 5 guide lock screw ❶ and turn the No. 5 guide until the entrance waveform sticks up a little above falt, as shown in the figure below. Then tighten the No. 5 guide lock screw (Fig. 4-6).

Note:
After tightening No.5 guide lock screw ❶, confirm that it is as in the figure below.

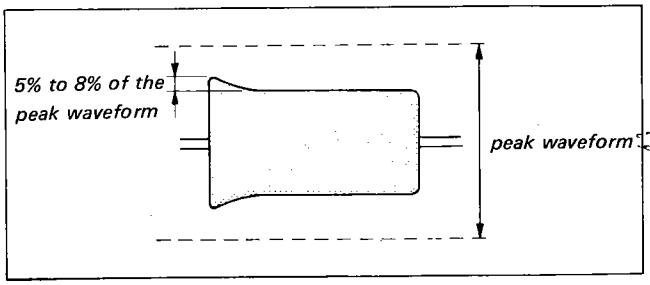

Fig. 4-4.

4) Next, lower the No. 6 guide until the waveform is flat.
5) Press the tape down between the No. 4 and No. 5 guide with a finger to lower the entrance side radio frequency waveform, then let go and confirm that the waveform returns to what it was before.
6) In this condition, check the clearance and curl of the No. 5 guide. If there are clearance and curl, adjust as explained in subsequent sections.

Note:

The tape tension between the No. 3, No. 4 and No. 5 guides must be balanced. If it is not, adjust the tilt of the No. 3 and No. 5 guides.

If the waveform cannot be made to look as shown in Fig. 4-4, or if when the tape is pressed and released on the entrance side it takes time for the waveform to return to what it was before, or if it does not return to what it was before, adjust according to the instructions given below.

[What to do when the waveform entrance output will not rise]

1) Check to see if the up-down tension between the No. 3, No. 4 and No. 5 guides is uniform. If it is not, adjust the tilt of the No. 3 and No. 5 guides.

   Note:

   The lower flange of the No. 4 guide must not protrude.
2) Raise the lower flange of the No. 4 guide to raise the entrance output.

   Note:

   It is sufficient to raise the lower flange of the No. 4 guide to 0.4 mm from its lowest position (within a rotation angle of 360°).
3) If the operation performed in step 2) fails to raise the waveform output, turn the No. 5 guide tilt adjustment screw slightly to the left, and the entrance output should rise.

[What to do when the waveform entrance output will not drop]

1) Remove the adjusting plate of the No. 3 guide from the drum. Just before the lower tension of the tape becomes slack, tighten screw ❷.
2) If the tape is in contact with the lower flange of the No. 4 guide, lower the flange. If the tape is sticking up from the lower flange, adjust the tilt of the No. 5 guide so that the tape does not stick up from the lower flange of the No. 4 guide.

[What to do when there is a clearance in the No. 5 guide]

Turn the No. 4 guide counterclockwise to run the tape upward and eliminate the clearance in the No. 5 guide.

Note:

At this time make sure that a large curl is not produced below the No. 4 guide.

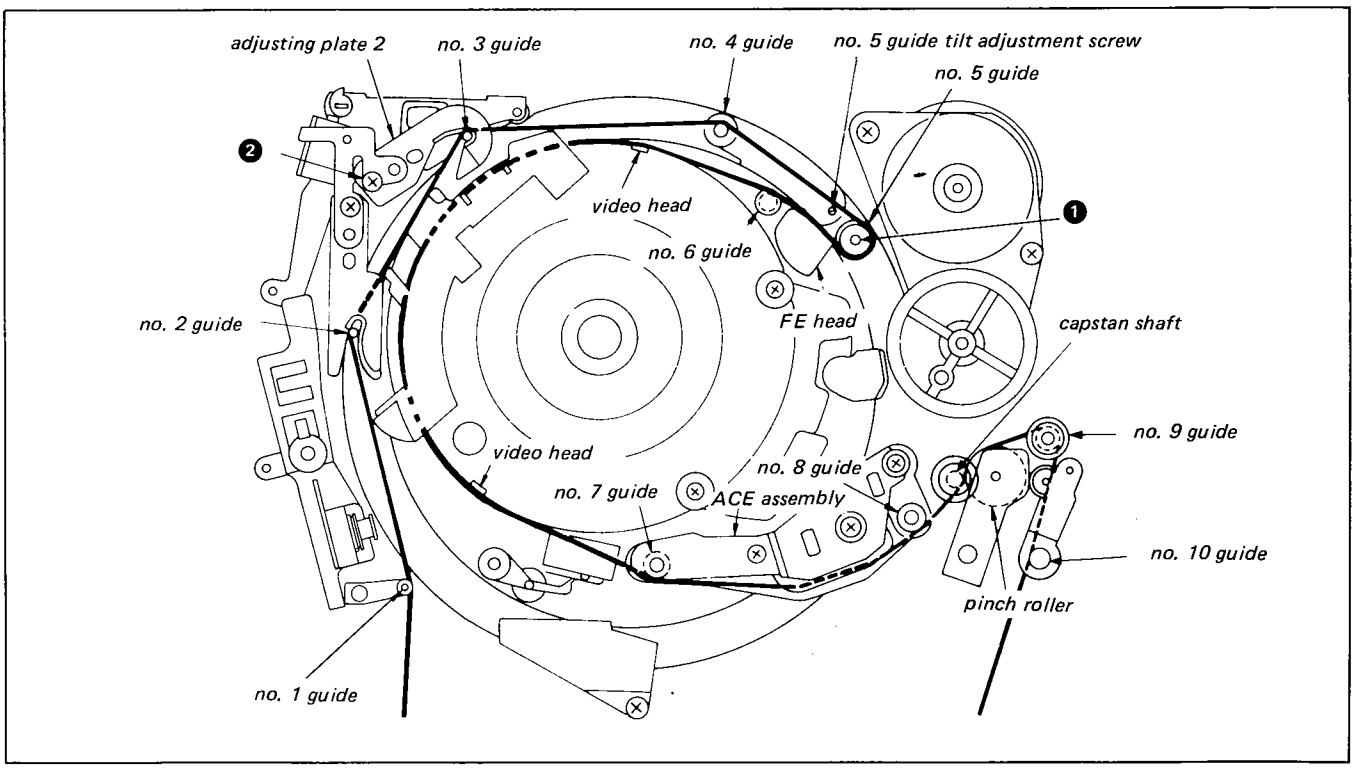

Fig. 4-5. Tape guide layout diagram

[What to do when there is a curl]

1) When there is a gap below the No. 4 guide: Just before the lower tension on the tape becomes slack, move adjusting plate 2 of the No. 3 guide to the outside.
2) When there is not a gap below the No. 4 guide (when there is a curl below the No. 4 guide):
   i) Check to see if the No. 4 guide has been raised up too high. If it has been raised up too high, turn the adjusting plate clockwise to lower the No. 4 guide.
   ii) If the curl still has not been removed after i), tighten the No. 5 guide tilt adjustment screw in the clockwise direction until the curl is removed.

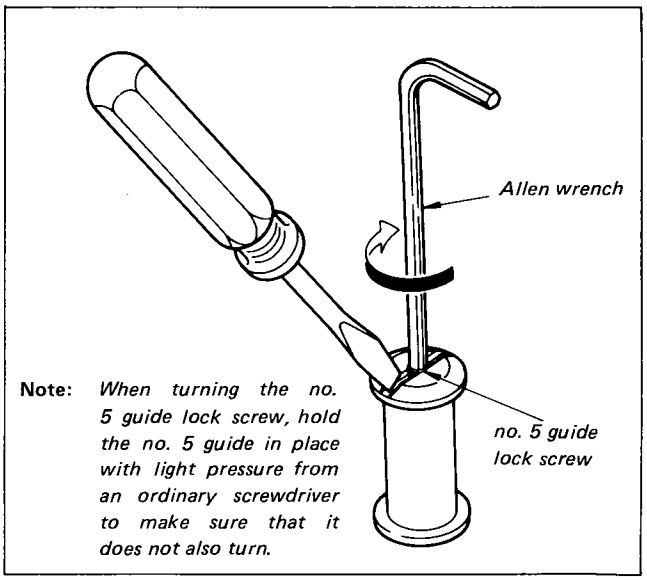

Fig. 4-6.

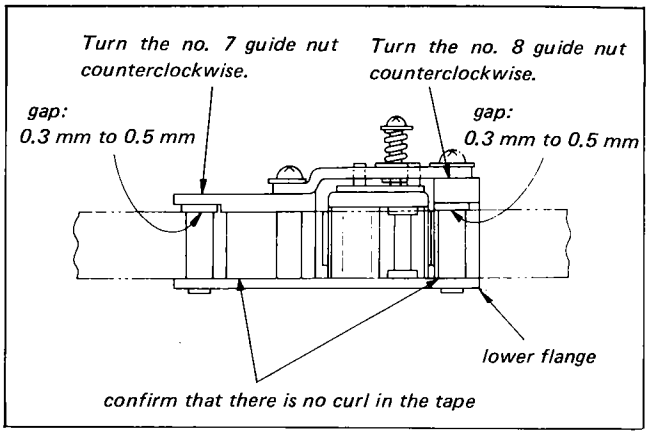

Fig. 4-7.

4) At this time, confirm that the exit free waveform is within the range shown in Fig. 4-8(a) and (b).
   • If it is outside of this range, adjust according to the procedure in 4-3.

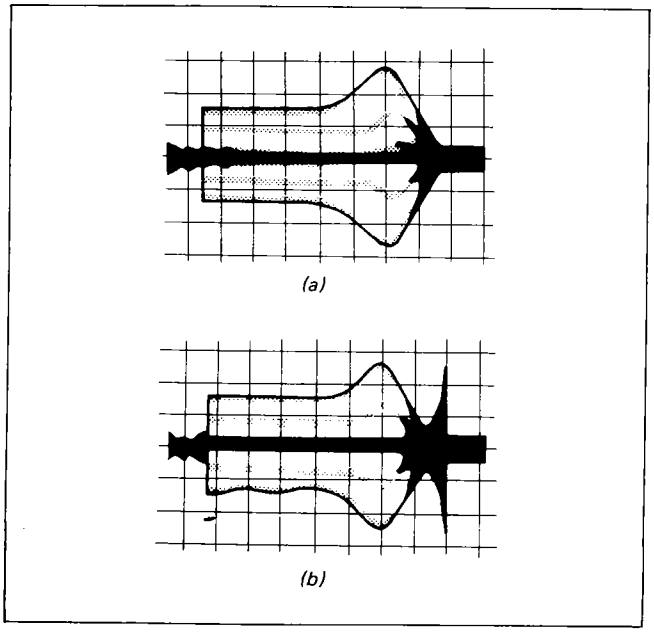

Fig. 4-8.

4-1-3. Exit Side Adjustment

1) Connect the oscilloscope to the No. ⑤ terminal on connector CN3 (on RP-8 board). Connect the external trigger to the No. ③ terminal on CN3.
2) Play the tracking section of the alignment tape. Adjust the tracking knob to reduce the amplitude of the radio frequency output waveform to 60% of its maximum level.
3) Watch the radio frequency output waveform when the No. 7 and No. 8 guides are raised (by turning the respective guide nuts counterclockwise) to let the tape run free. This waveform is called to exit free waveform.

   Note:

   Be careful not to raise the guides too far. They should be raised only about 0.3 to 0.5 mm, and the tape should not contact the lower flange of the ACE head.

5) Turn the No. 7 guide nut clockwise until the waveform is flat.
6) Turn the No. 8 guide nut clockwise until the No. 8 guide is lined up with the tape (just before the waveform starts to change lower the guide until there is no curl).
7) During playback, confirm that no curl occurs in the No. 7 guide or the No. 8 guide.
8) During rewind, confirm that no curl or clearance occurs in the No. 8 guide. If there is a curl or clearance, adjust using the No. 9 guide. After adjustment, lock the guide nut.

4-2. ADJUSTMENTS AFTER REPLACEMENT OF THE ACE ASSEMBLY

After removal or replacement of the ACE assembly, perform the adjustments listed below.

4-2-1. Exit side tracking adjustment
4-2-2. CTL head (ACE assembly) position adjustment
4-2-3. Audio head (ACE assembly) azimuth adjustment
4-2-4. Audio head (ACE assembly) height adjustment

4-2-1. Exit Side Tracking Adjustment

1) Set the parallel plate (SL-0657 in the list of fixtures and tools) up against the unit as shown in Fig. 4-9, and turn the tilt adjustment screw to adjust the audio head vertically.

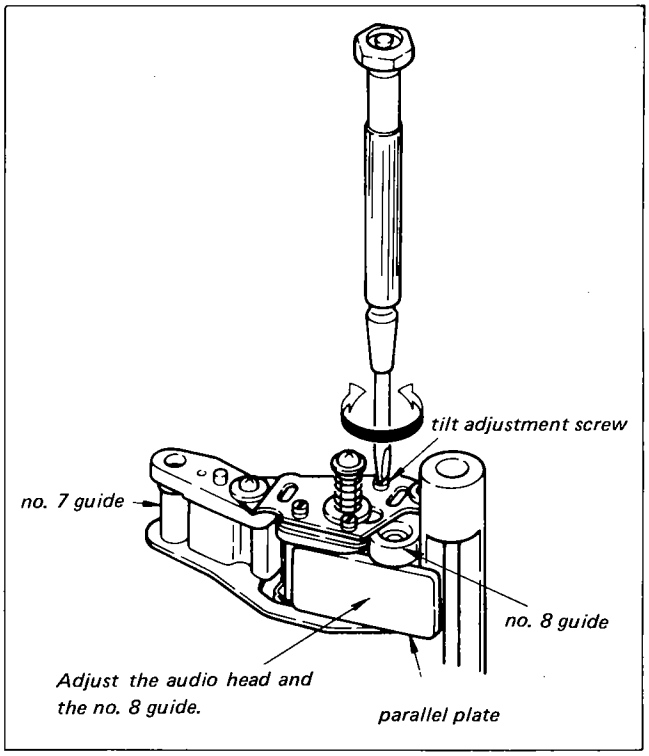

Fig. 4-9.

2) Connect the oscilloscope to terminal ⑤ of connector CN3 (on RP-8 board). Connect the external trigger to terminal ③ of CN3.
3) Play the tracking section of the alignment tape. Adjust the tracking knob until the radio frequency output waveform amplitude is reduced to about 60% of its maximum level. maximum level.
4) Raise the No. 7 and No. 8 guides (turn the respective guide nuts counterclockwise) and observe the radio frequency exit free waveform when the tape runs free.

Note:

Be careful not to raise the guide too far. Raise it about 0.3 to 0.5 mm, and be careful that the tape does not contact the lower flange of the ACE head.

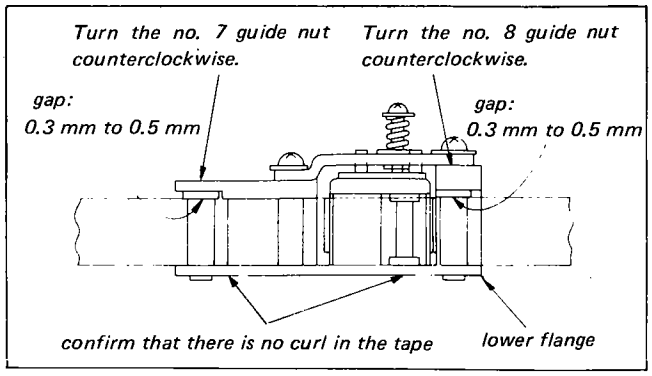

Fig. 4-10.

5) At this time, confirm that the exit free waveform is within the range shown in Fig. 4-11(a) and (b).

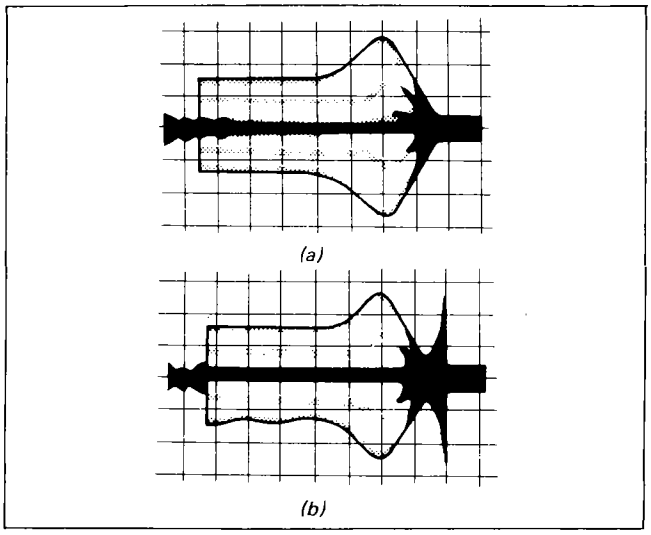

Fig. 4-11.

[When the waveform is outside this range]

- When the waveform is outside this range and has the form shown in Fig. 4-12, turn the tilt adjustment screw counterclockwise to adjust until the waveform is within the required range.

Note:

Complete the adjustment by turning the adjustment screw in the direction of tightening (clockwise).

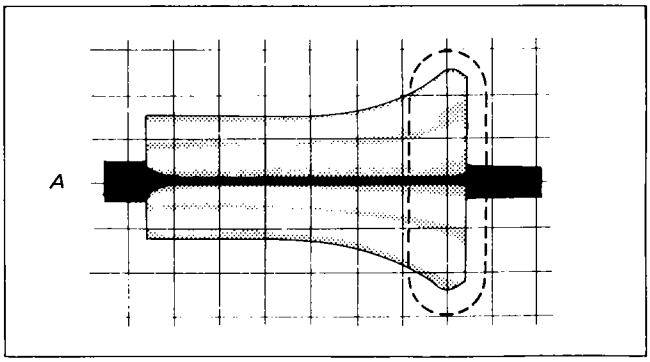

Fig. 4-12.

- When the exit free waveform is outside of the required range and has the form shown in Fig. 4-13, turn the tilt adjustment screw counterclockwise to produce waveform A (Fig. 4-12), then turn it clockwise to bring the waveform within the required range.

  Note:

  Finish the adjustment by turning the adjustment screw in the direction of tightening (clockwise).

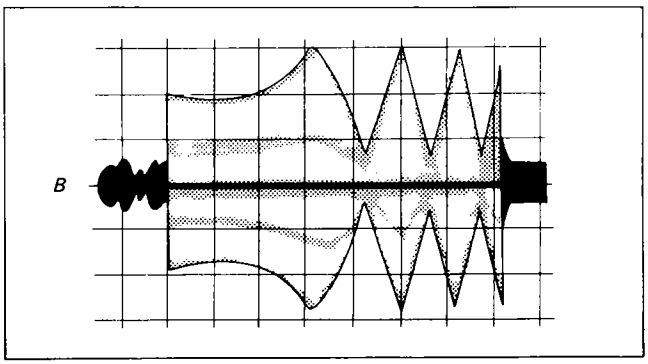

Fig. 4-13.

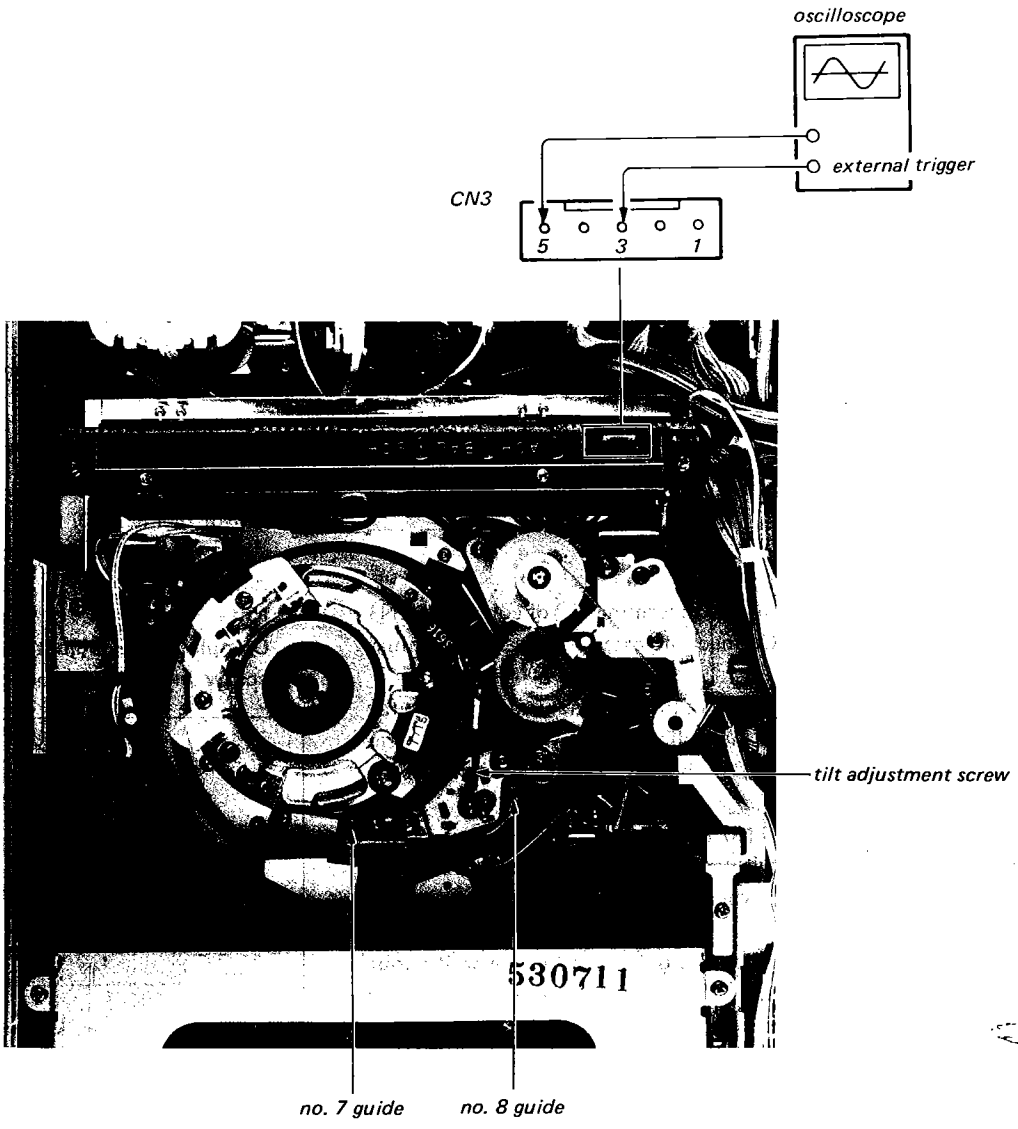
6) Turn the No. 7 guide nut clockwise to flatten the waveform.
7) Turn the No. 8 guide nut clockwise to line the No. 8 guide up with the tape (lower it so that there is no curl just before the waveform starts to change).
8) If the radio frequency waveform is as shown in Fig. 4-12 on the exit side, repeat the adjustment.

[Adjustment point]

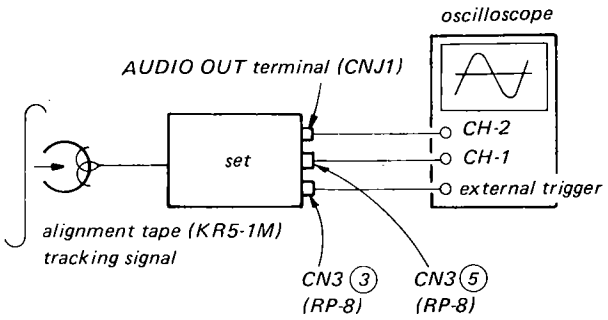


4-2-2. CTL Head (ACE Assembly) Position Adjustment

This adjustment includes the mechanical CTL head mounting position adjustment and the electrical tracking control center adjustment. The tracking control center adjustment is to be performed first, followed by the mechanical adjustment of the head mounting position.

[Connections]

1) Playback



[Method of adjustment]

1) Play the tracking signal section of the alignment tape.
2) Turn the tracking control knob clockwise or counterclockwise to the center click position. Confirm that the amplitude of the radio frequency output signal is at its maximum level. Also confirm that the audio signal 0 level position occurs at the location of the channel B waveform. If the necessary standards are not met follow the procedure in 3).

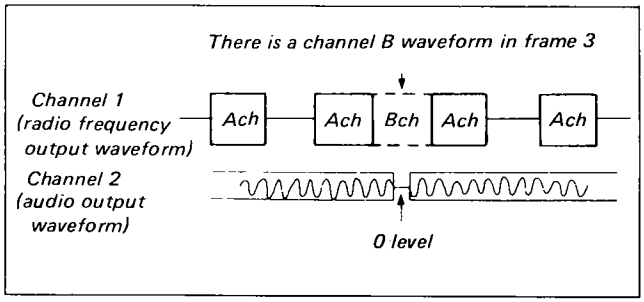


Fig. 4-14.

3) Tracking center adjustment
   Refer to electrical adjustment 2 in section 5-3-2.
4) CTL head position adjustment
   a. Set the tracking control knob at the center click position.
   b. Loosen the 2 ACE assembly position adjustment screws then use a tool such as an ordinary screwdriver to slide the ACE assembly to where the radio frequency output waveform amplitude becomes a maximum.
   c. Play the color bar signal on the alignment tape and check the picture quality.
   d. Tighten the position adjustment screws, then lock them.

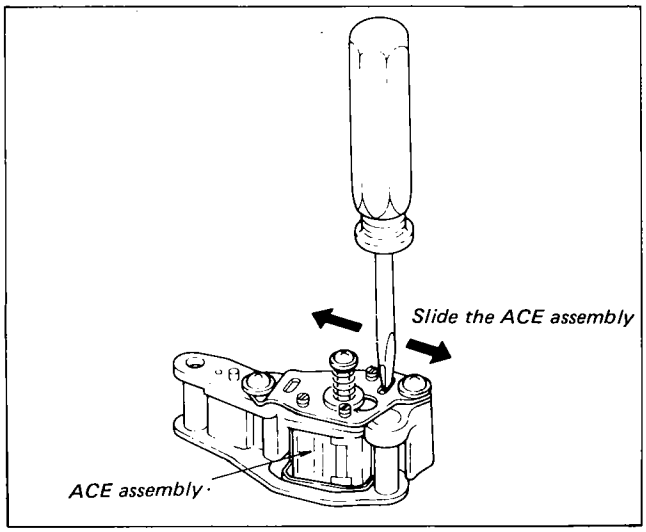

Fig. 4-15.

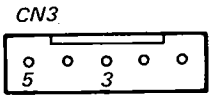
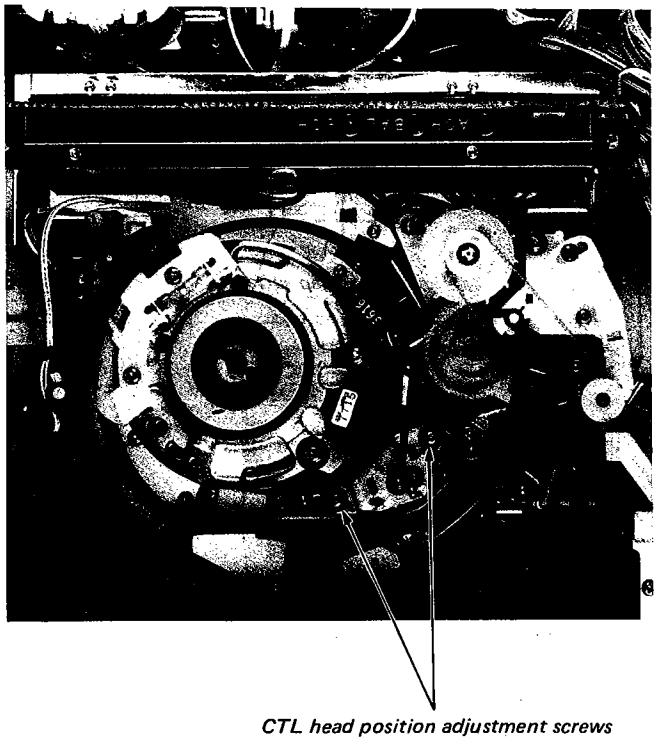
[Adjustment point]

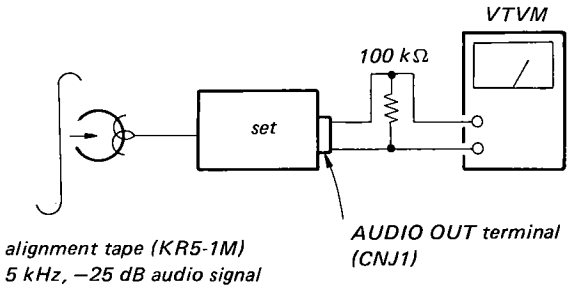




4-2-3. Audio Head (ACE Assembly) Azimuth Adjustment

[Connections]

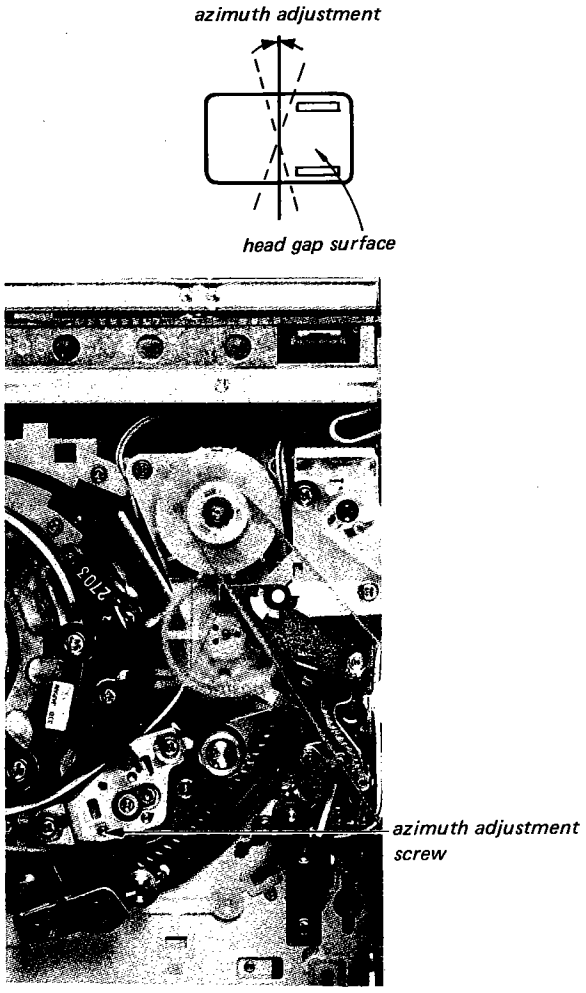
1) Playback



[Method of adjustment]

1) Play the 5 kHz, −25 dB audio signal section of the alignment tape.
2) Adjust the azimuth adjustment screw until the output level (VTVM indication) is a maximum.
   Note:
   Complete the adjustment by turning the adjustment screw in the direction of tightening (clockwise).
3) After adjustment, lock the adjustment screw.

[Adjustment point]



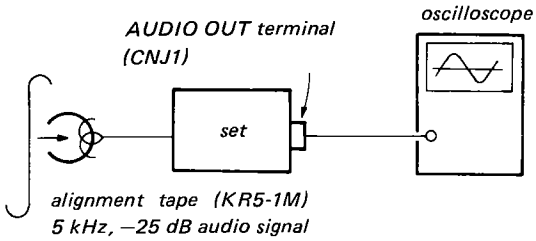
4-2-4. Audio Head (ACE Assembly) Height Adjustment

[Condition]

This adjustment must only be performed after the exit side tracking adjustment has been completed.

[Connections]

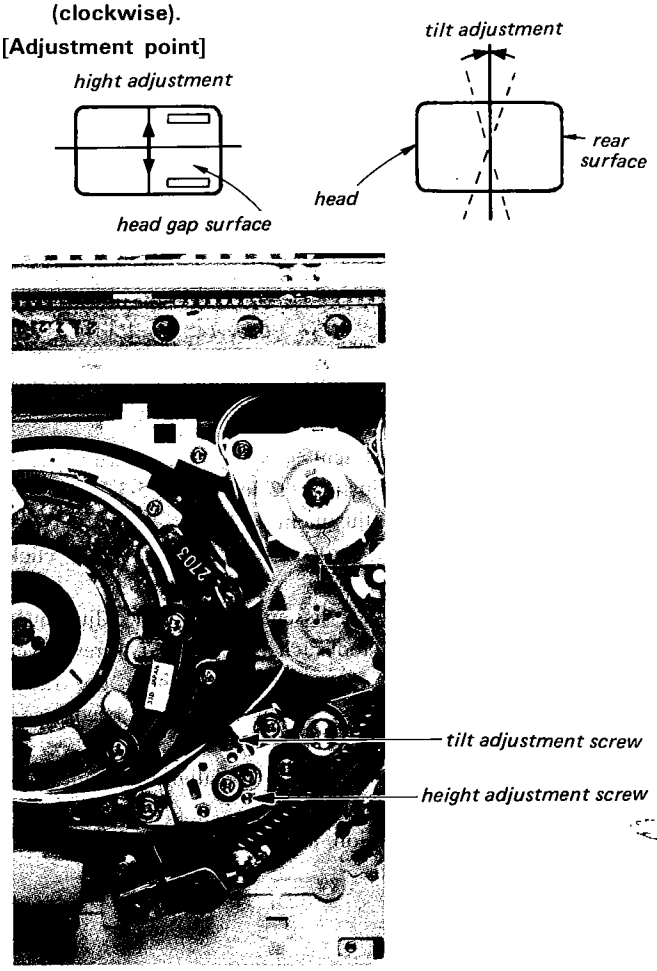
1) Playback



[Method of adjustment]

1) Play the 5 kHz, −25 dB audio signal section of the alignment tape.
2) Adjust the height adjustment screw and the tilt adjustment screw so that the amplitude of the audio line output waveform (5 kHz) becomes a maximum.
   Note:
   Both of these adjustment screws must be turned in the same direction and through the same angle, and not more than ±30°. Complete the adjustment by turning the adjustment screws in the direction of tightening (clockwise).

[Adjustment point]



4-3. ADJUSTMENTS AFTER REPLACEMENT OF THE CAPSTAN MOTOR

When the capstan motor has been removed or replaced, perform the following adjustments.

4-3-1. Capstan shaft vertical adjustment

4-3-2. Exit side tracking adjustment

4-3-1. Capstan Shaft Vertical Adjustment

1) Set the parallel plate (SL-0657 in the list of fixtures and tools) up against the No. 10 guide vertically, as shown in Fig. 4-16.
2) Loosen the mounting screw, then turn adjustment screw until the capstan motor shaft is vertical.
3) After the adjustment, tighten the mounting screw.

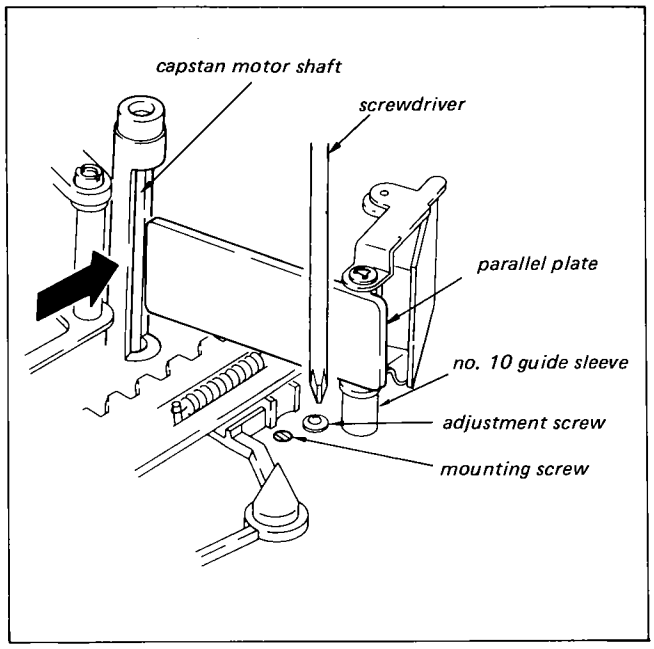


Fig. 4-16.

4-3-2. Exit Side Tracking Adjustment

1) Connect an oscilloscope to terminal No.⑤of connector CN3 on RP-8 board. Then connect the external trigger to terminal ③ of CN3.
2) Play the tracking section of the alignment tape. Adjust the tracking knob until the amplitude of the radio frequency output waveform is reduced to about 60% of its maximum level.
3) Raise the No. 7 and No. 8 guides (turn the respective guide nuts counterclockwise) to free the running of the tape, and observe the radio frequency exit free waveform.

Note:

Be careful not to raise the guides too far. Raise them about 0.3 to 0.5mm. Make sure that the tape does not touch the lower flange of the ACE head.

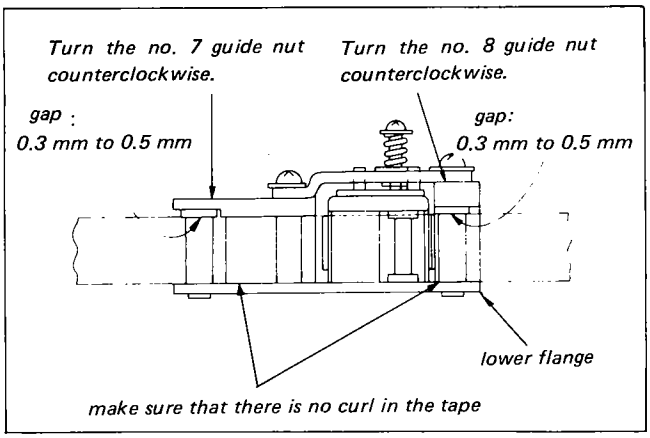

Fig. 4-17.

4) At this time, confirm that the exit free waveform is within the range shown Fig. 4-18(a) and (b).

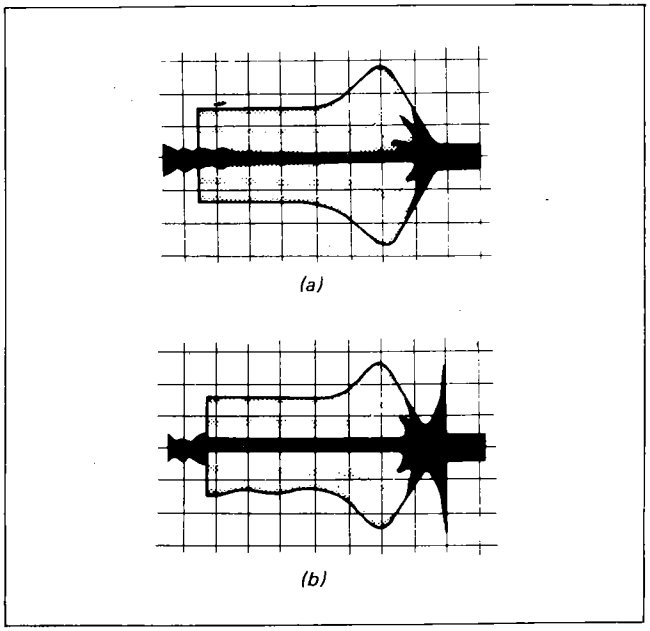

Fig. 4-18.

[When the waveform is out of range]

- When the exit free waveform is out of the correct range, and is in the form shown in Fig. 4-19, adjust as follows.
  Loosen the capstan mounting screw, then turn the adjustment screw counterclockwise until the waveform falls within the range shown in Fig. 4-18(a) and (b).
  Note:
  When turning the adjustment screw, wait (10 to 15 seconds) until the waveform becomes stable before adjusting further.
  Complete the adjustment by turning the adjustment screw in the direction of tightening (clockwise).

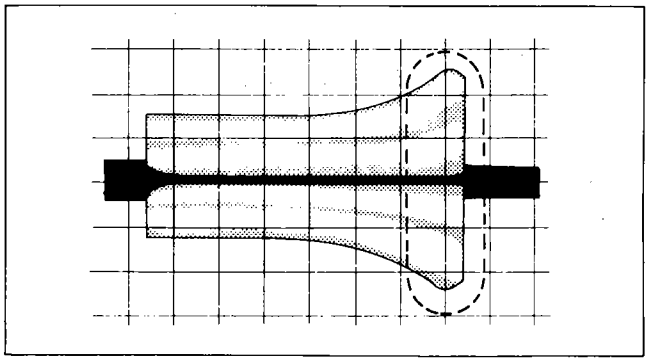

Fig. 4-19.

- If the exit waveform is outside of its correct range and has the form shown in Fig. 4-20, adjust as follows. Loosen the capstan mounting screw, then turn the adjustment screw clockwise until the waveform is brought within the range shown in Fig. 4-18(a) and (b).

[Adjustment point]

Note:
When turning the adjustment screw, wait (10 to 15 seconds) until the waveform becomes stable before adjusting further. Complete the adjustment by turning the adjustment screw in the direction of tightening (clockwise).

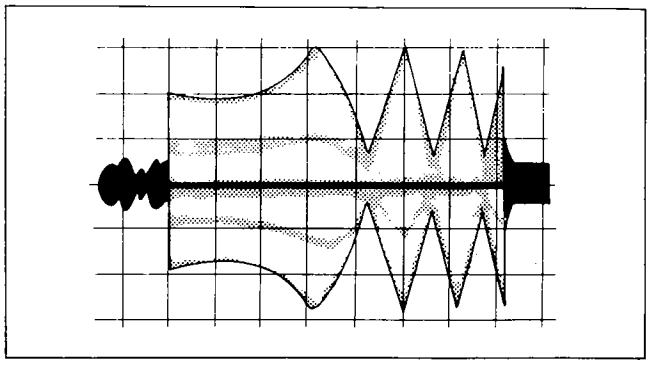

Fig. 4-20.

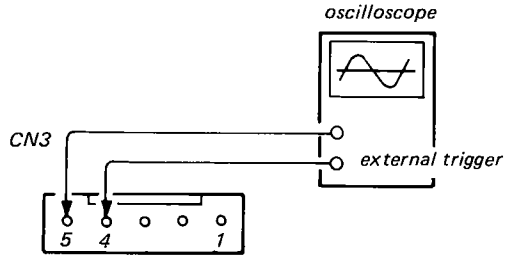
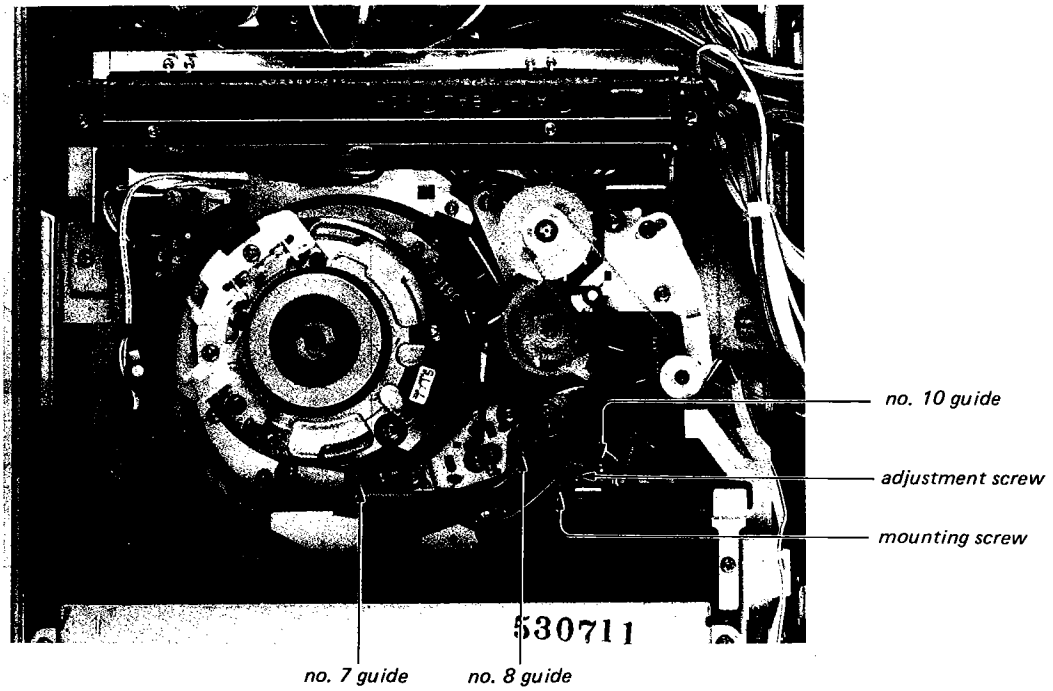
5) Tighten the mounting screw.
6) Turn the No. 7 guide nut clockwise to flatten the waveform.
7) Turn the No. 8 guide nut clockwise to line the No. 8 guide up with the tape. (Lower it until there is no curl just before the waveform changes.)
8) If the exit waveform rises, use the No. 7 guide to flatten it and then line the No. 8 guide up again.





4-4. HOW TO INSPECT THE TAPE TRAVELING WHEN ADJUSTING THE TAPE PATH

Adjust and check the tape path using the alignment tape following the adjustment guide, then check the tape travel using the procedure below.

1) Get one L-830 reel ready (these are widely available commercially). Remove the cassettte cover referring to Fig. 4-1 of the adjustment guide.
2) Run the L-830 tape in playback mode and check the following points.
   i) Entrance side
   Confirm that the tape does not contact the upper flange of the No. 4 guide or the No. 6 guide, and is not damaged. (Some tape curl is allowed but the tape must not be creased.) (Fig. 4-21)
   ii) Exit side
   Confirm that the tape does not contact the upper flange of the No. 7 guide or the No. 8 guide, or the upper or lower flange of the No. 10 guide, and is not scratched. (Some tape curl is allowed but the tape must not be creased.) (Fig. 4-22)
   iii) If the tape was found to not be running correctly in step ii), readjust the tape path using the alignment tape, following the adjustment guide.
   If the tape is not running correctly on the entrance side, refer to section 4-1-2 of the adjustment guide.
   If the tape is not running correctly on the exit side, refer to section 4-1-3 of the adjustment guide.

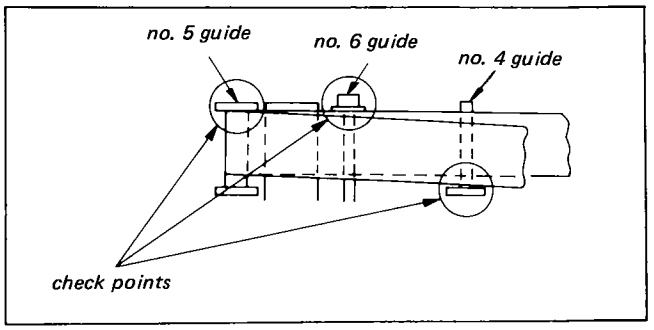


Fig. 4-21.

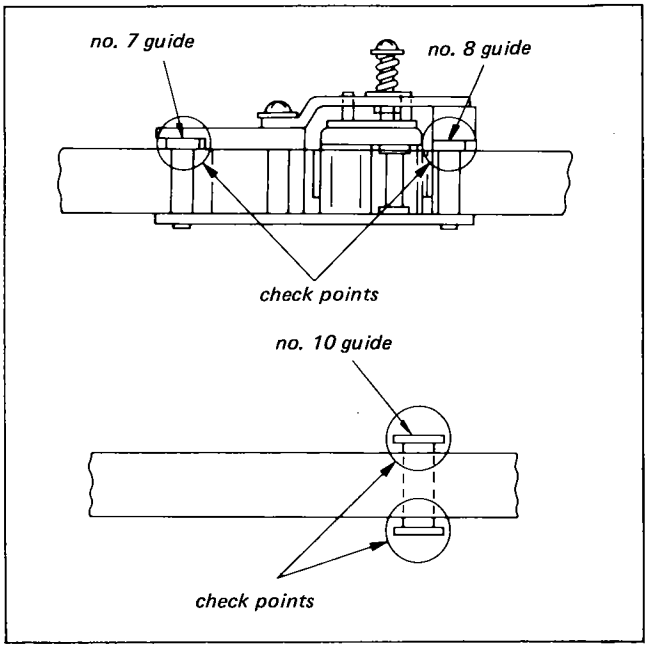

Fig. 4-22.

SECTION 5
ELECTRICAL ADJUSTMENTS

All of the instructions needed to adjust the electrical circuits in this set are given in this section.

[Instruments and tools needed]

(1) Color TV
(2) Single or double-trace oscilloscope, 15 MHz band or above, with delay mode
(3) Frequency counter (4 digits or more)
(4) NTSC pattern generator
(5) Digital voltmeter
(6) Multitester (20 kΩ/V)
(7) Audio generator
(8) Attenuator
(9) Distortion meter
(10) Alignment tape (KR5-1M) Part code: (8-969-995-82)
(11) Adjustment screwdriver (for use in adjusting semi-fixed resistors and coils) Part code: 7-700-733-01

[Setup for adjustments]

For these adjustments connect the NTSC pattern generator to the SL-2300 VHF antenna terminal, and use the output of the pattern generator as the radio frequency input signal. This radio frequency signal is processed by the internal tuner in the VTR and the intermediate frequency circuit. The video output signal from the intermediate frequency circuit must satisfy the specifications shown in the diagram below. Connect the oscilloscope to TP2 on YC-27 board to check the video output signal.

The items to be checked are the following:

(1) The amplitude of the horizontal synchronization signal must be about 0.3 Vp-p.
(2) The amplitude of the video signal must be about 0.7 Vp-p.
(3) The amplitude of the burst signal must be about 0.3 Vp-p.

The video (color bar) signal used in the adjustments is shown in Fig. 5-1.

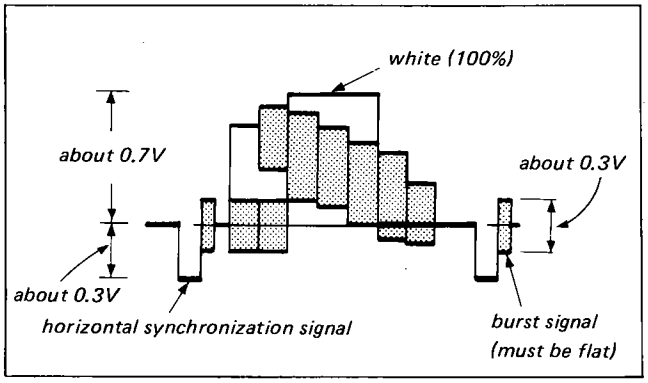

Fig. 5-1. Pattern generator color bar signal

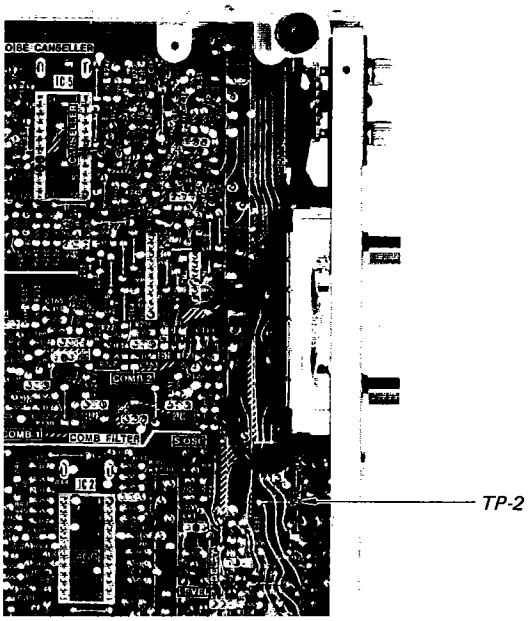

YC-27 board

[Method of terminating in 75Ω]

To terminate the video output terminal (CNJ2), do it as shown in Fig. 5-2.

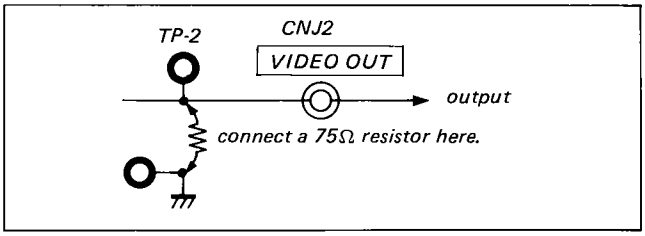

Fig. 5-2. 75Ω termination

(contents of the KR5-1M alignment tape)

	mode	video signal	audio signal	time
1	βII	Color Bar	3kHz −5dB	4 minutes each
2		Monoscope	333Hz −25dB	
3		RF sweep	5kHz −25dB	
4		Tracking	1kHz −5dB	
5	βIII	Color Bar	3kHz −5dB	
6		Monoscope	5kHz −25dB	
7		Color Bars/ Beta hi-fi: 400Hz ± 25kHz DEV.	----------	

[On the color bar signal]

The 75% color bar signal recorded on the alignment tape is shown in Fig. 5-3.

Note:

Observed at TP2 on YC-27 board.

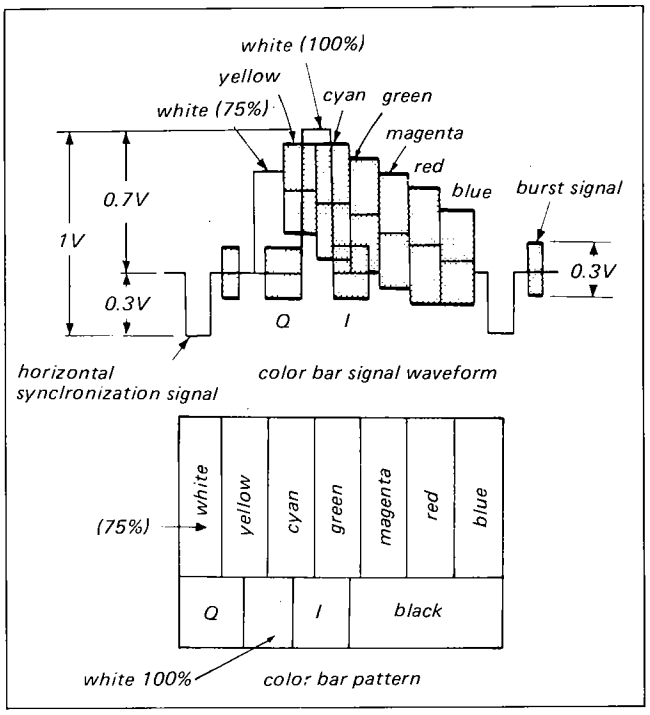

Fig. 5-3. Color bar signal an the alignment tape

[Standard input/output levels and impedances]

Input and output terminals

Video input: pin jack
input signal: 1 Vp-p, 75Ω non-equilibrium, synchronization negative

Video output: pin jack
output signal: 1 Vp-p, 75Ω non-equilibrium, sychronization negative

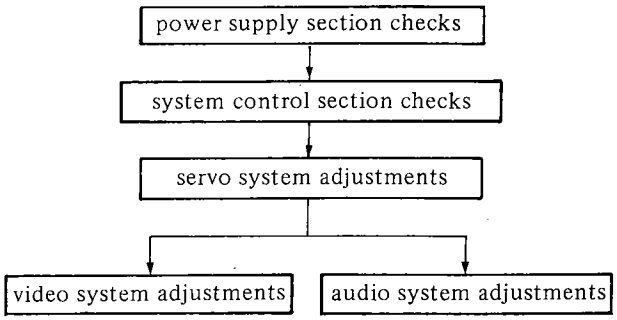
Audio input: mini jack
input level: −10 dBs (0 dBs = 0.775 Vrms)
input impedance: 47 kΩ or higher

Line audio output: mini jack
standard output: −5 dBs (440 mV) at 100 kΩ negative load
load impedance: 10 kΩ or higher

Microphone input: mini jack
−60 dBs, for low impedance use

[Adjustment procedure]

Adjust according to the procedure described below.



5-1. POWER SUPPLY SECTION CHECKS

Perform thes measurements in E-E mode (power switch ON mode).

1. Unregulated Switch 16V Check (PS-34 Board)

The voltage between terminal No. ① of CN3 and terminal No. ⑤ on the ground side should be 19V ± 3V.

2. Unregulated Switch 45V Check (PS-34 Board)

The voltage between terminal No. ① of CN4 and terminal No. ④ on the ground side should be 48V ± 5V.

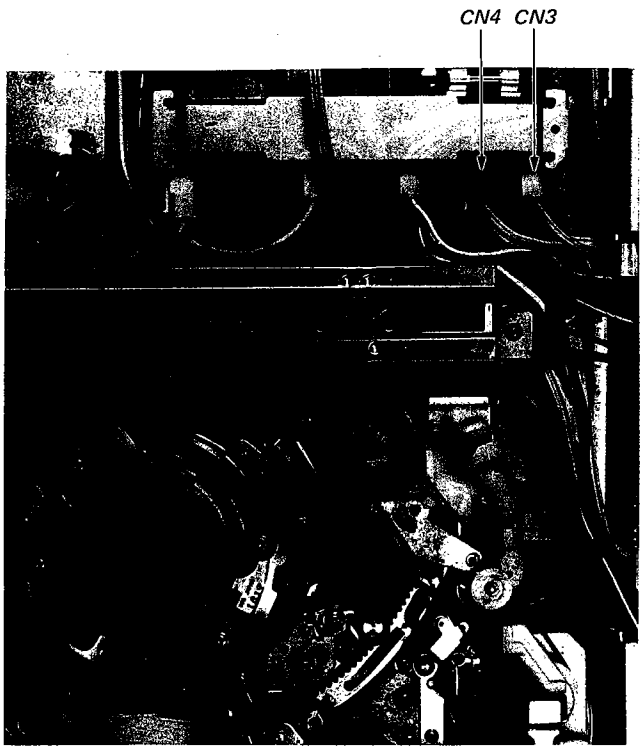
3. Switched (REG) 12V (PS-34 Board)

The voltage between terminal No. ② of CN3 and terminal No. ⑤ on the ground side should be 12V ± 0.15V.

4. Switched (System) 12V (PS-34 Board)

The voltage between terminal No. ⑥ of CN3 and terminal No. ⑨ on the ground side should be 12V ± 0.3V.

[Adjustment point (PS-34 board)]

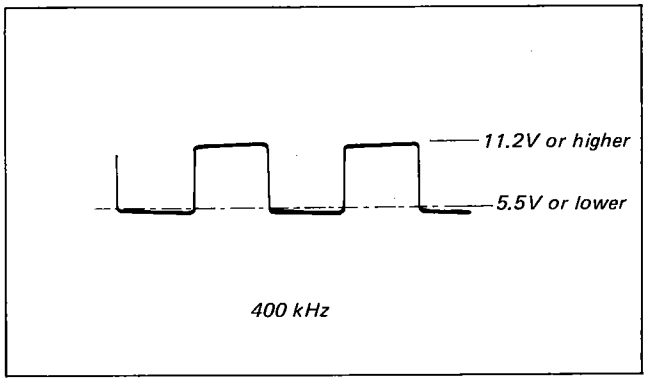


5-2. SYSTEM CONTROL SECTION CHECKS

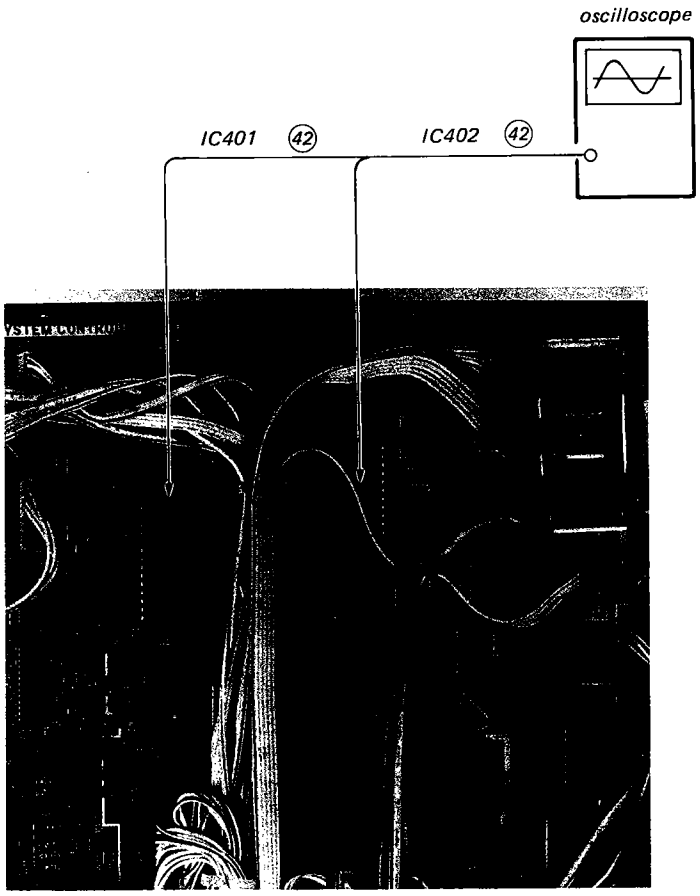
Perform these measurements in E-E mode (power switch ON mode).

1. Clock Oscillator Frequency Check

Measure at the external clock input terminal of the system control IC (terminal No. ㊷ of ICs 401 and 402) on SS-25 board.



[Measurement point (SS-25 board)]



5-3. SERVO SYSTEM ADJUSTMENTS

[Adjustment procedure]

5-3-1. Drum Servo System

1. Voltage checks
2. Clock check
3. Drum free speed adjustment
4. Radio frequency switching position adjustment
5. Drum f_H correction adjustment

5-3-2. Capstan Servo System

1. Capstan free speed adjustment
2. Tracking center adjustment

5-3-1. Drum Servo System Adjustments

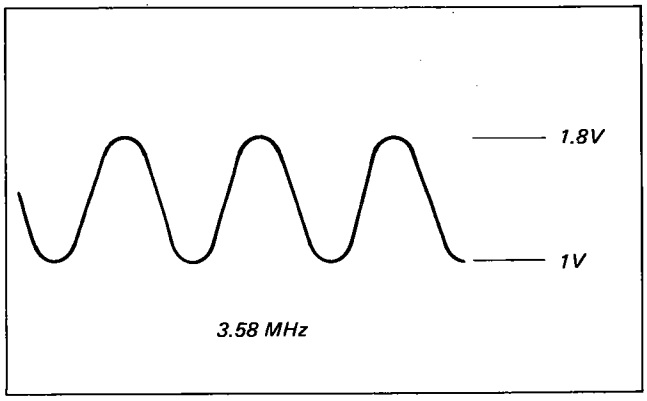
1. Voltage checks

Measure the voltage at terminals No. ㉚, No.⑦ and No.⑩ of the servo IC (IC1).

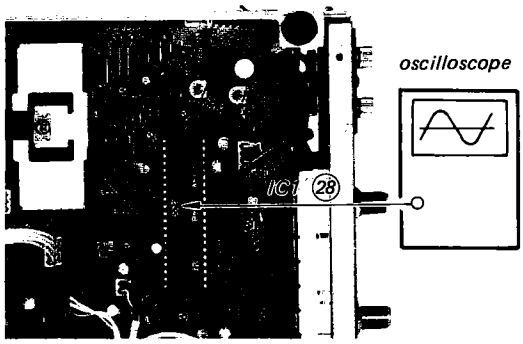
terminal No. ㉚ ..... 5.7V ± 0.3V
terminal No. ⑦ ..... 8.95V ± 0.3V
terminal No. ⑩ ..... 3.4V ± 0.3V

2. Clock check

Measure the waveform at terminal No. ㉘ of the servo IC (IC1).



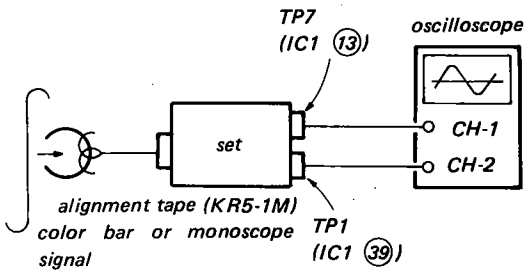
[Measurement point (SS-25 board)]



3. Drum free speed adjustment

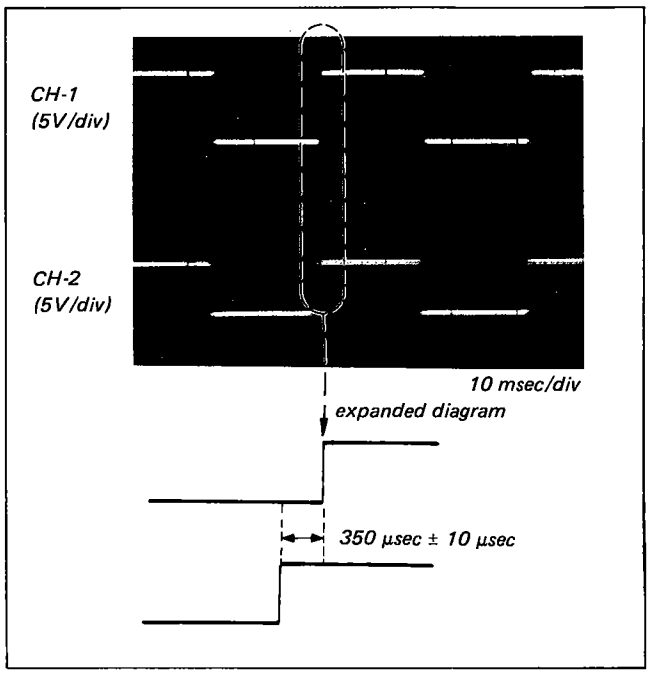
[Connections]

1) Playback

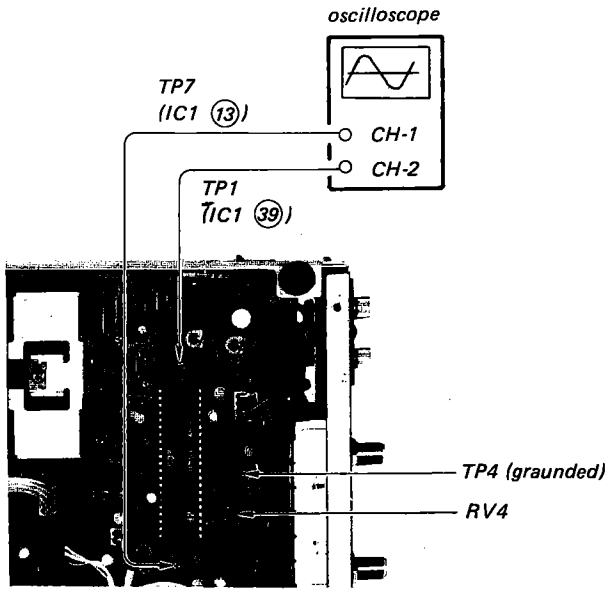


[Method of adjustment]

1) Play the color bar signal or the monoscope signal on the alignment tape.
2) Adjust to 350 μsec ± 10 μsec using RV4.



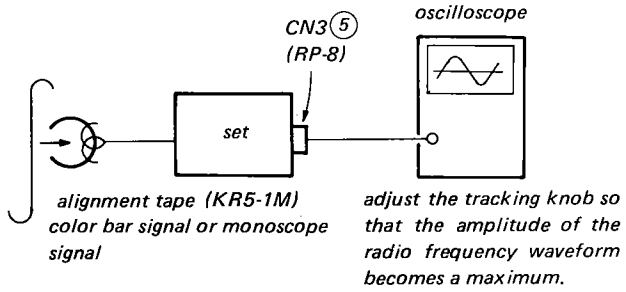
[Adjustment point: servo section (SS-25 board)]



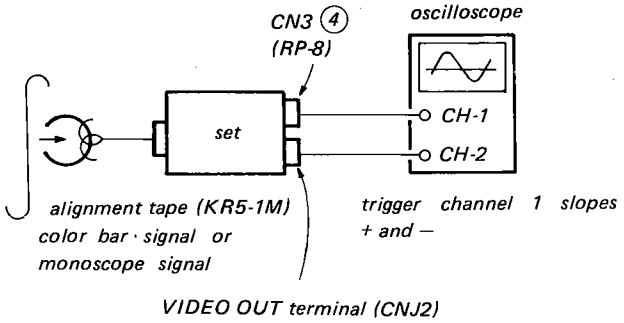
4. Radio frequency switching position adjustment

[Connections]

1) Playback

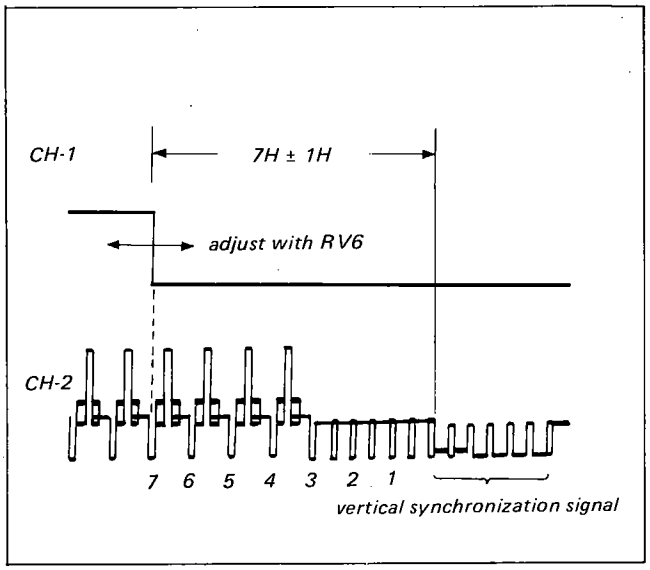


2) Playback

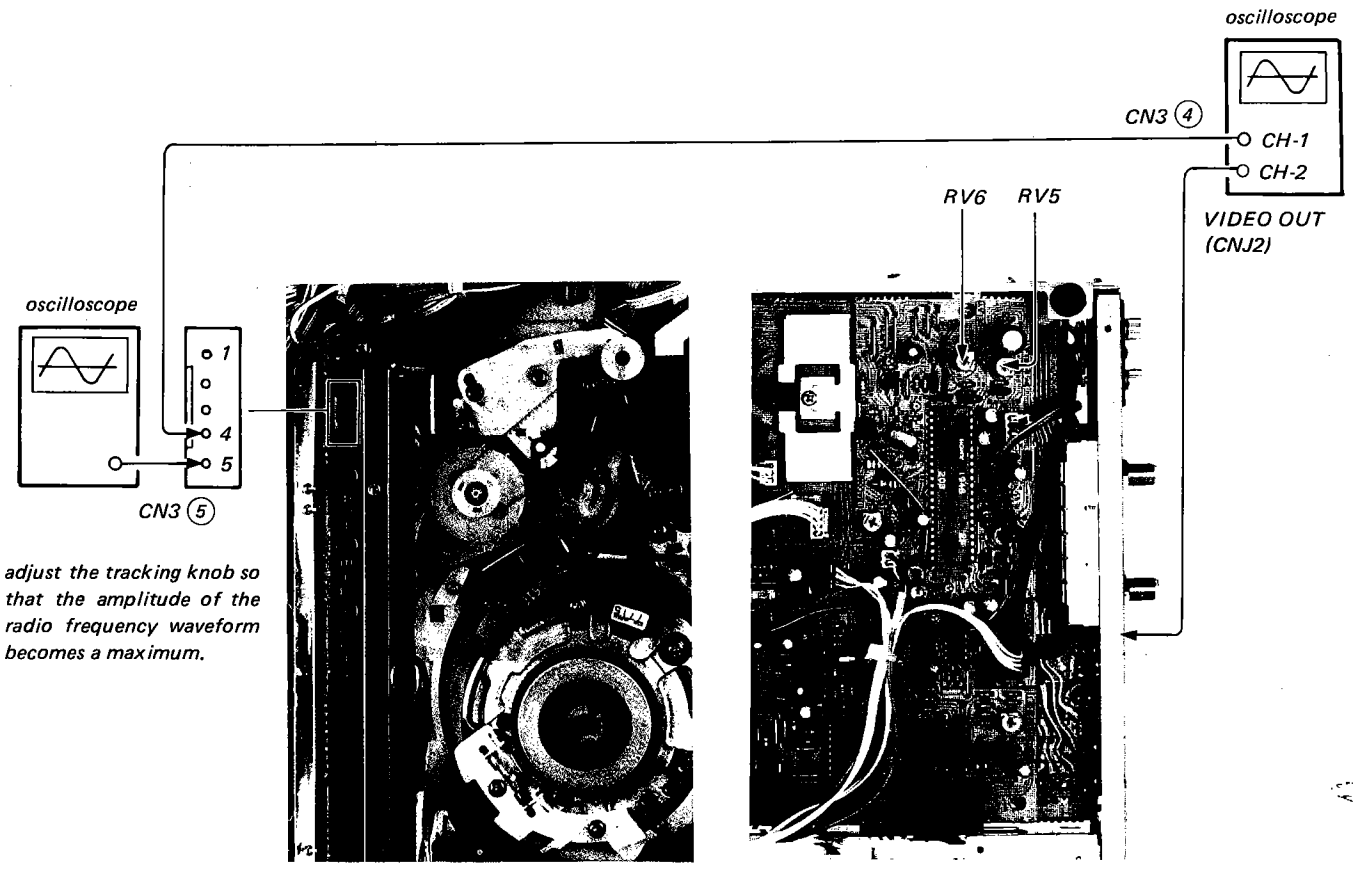


[Method of adjustment]

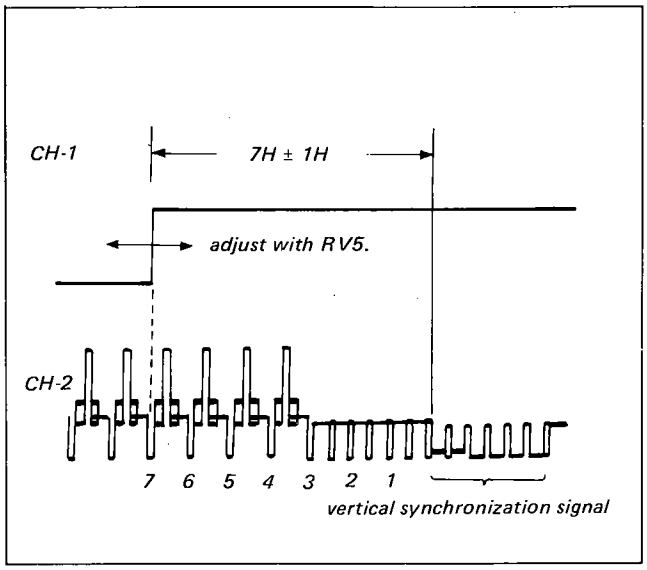
1) Play the color bar signal or the monoscope signal on the alignment tape and adjust the tracking knob so that the amplitude of the radio frequency waveform at terminal No. ⑤ of CN3 becomes a maximum.
2) Set the trigger slope of the oscilloscope to +.
3) Adjust RV6 (PG.A) so that the time from the falling edge of the channel 1 waveform and the vertical synchronization signal on channel 2 becomes $7_H \pm 1_H$ lines.



[Adjustment point: servo section (SS-25 board)]



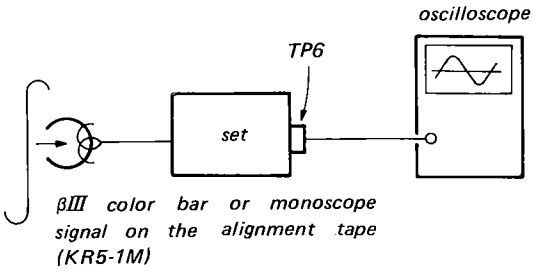
4) Set the oscilloscope trigger slope to −.
5) Adjust RV5 (PG.B) so that the time between the rising edge of the channel 1 waveform and the vertical synchronization signal on channel 2 becomes $7_H \pm 1_H$ lines.



5. Drum f_H correction adjustment

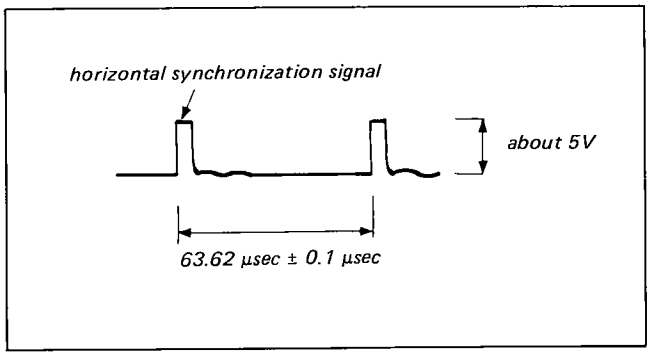
[Connections]

1) Picture search

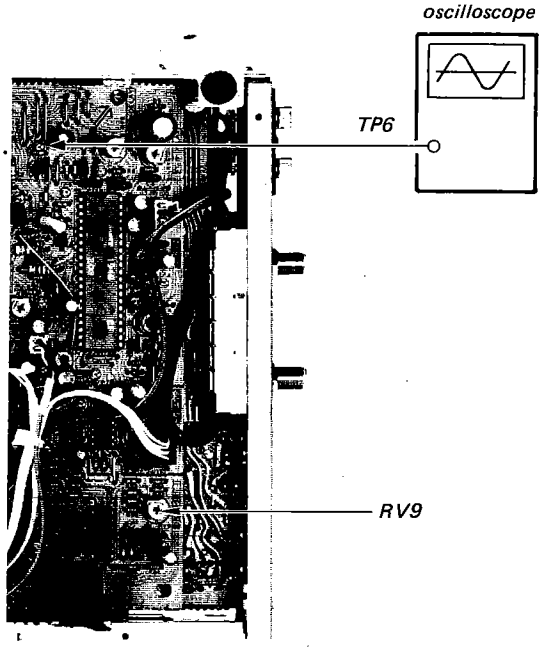


[Method of adjustment]

1) Run the set in picture search mode over the βIII color bar signal or the monoscope signal section of the alignment tape.
2) While running the picture search (◀◀:BETASCAN), adjust RV9 so that the interval shown in the diagram below becomes 63.62 μsec ± 0.1 μsec.



[Adjustment point: servo section (SS-25 board)]



5-3-2. Capstan Servo System Adjustment

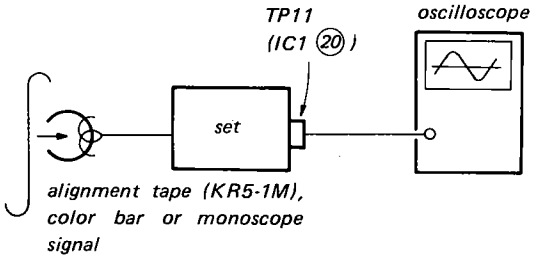
1. Capstan free speed adjustment

[Condition]

This adjustment should be performed in approximately five minutes after the power is turned on.

[Connections]

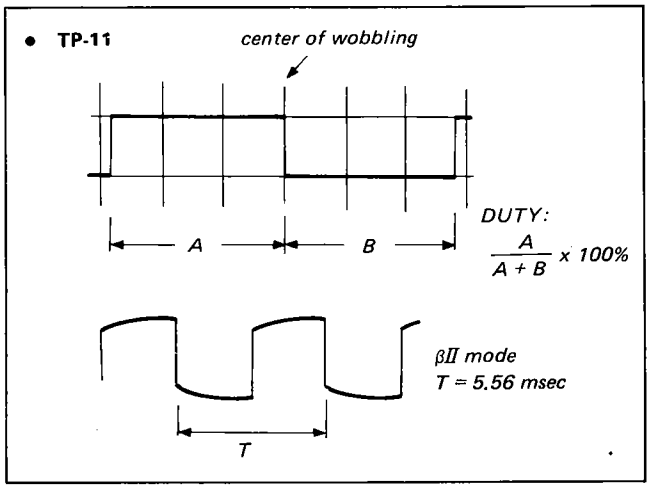
1) Playback



[Method of adjustment]

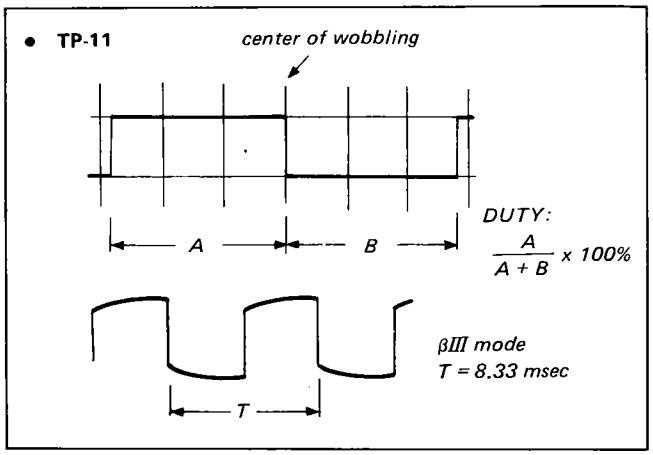
• βII

1) Play the βII color bar signal or the monoscope signal on the alignment tape.
2) Adjust RV3 so that the duty cycle of the waveform on the oscilloscope becomes 50%.
   After adjustment, check the FG signal period at terminal No. ⑰ of IC1.



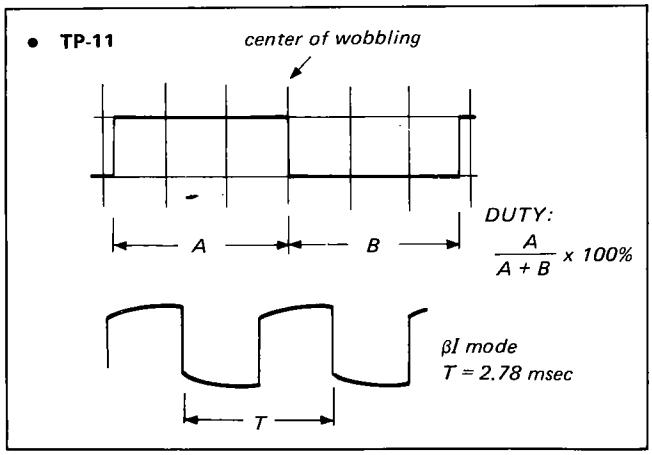
• βIII

3) Play the βIII color bar signal or monoscope signal on the alignment tape.
4) Adjust RV2 so that the duty cycle of the waveform on the oscilloscope becomes 50%.
   After adjustment, check the FG signal period at terminal No. ⑰ of IC1.

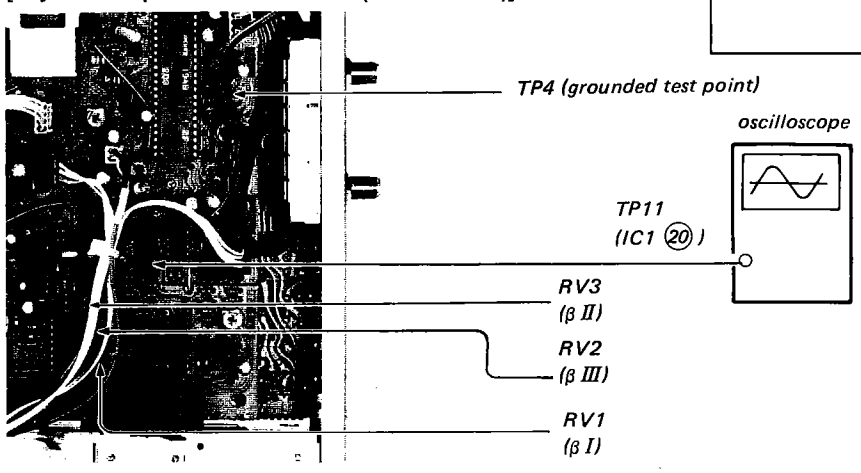


• βI

5) Thread the blank tape and set the unit to the REC mode. Make a connection between the 21-pin terminal (12V) and 30-pin terminal (βI MODE OUT), of IC402, and set the unit to the βI REC mode.
6) Adjust RV1 so that the duty cycle of the waveform on the oscilloscope becomes 50%.
   After adjustment, check the FG signal period at terminal No. ⑰ of IC1.



[Adjustment point: servo section (SS-25 board)]



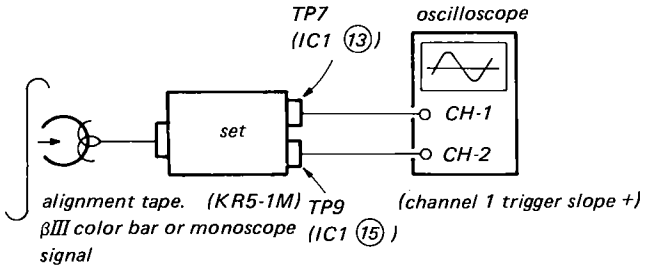
2. Tracking center adjustment

[Condition]

The tracking knob must be set to the center click position.

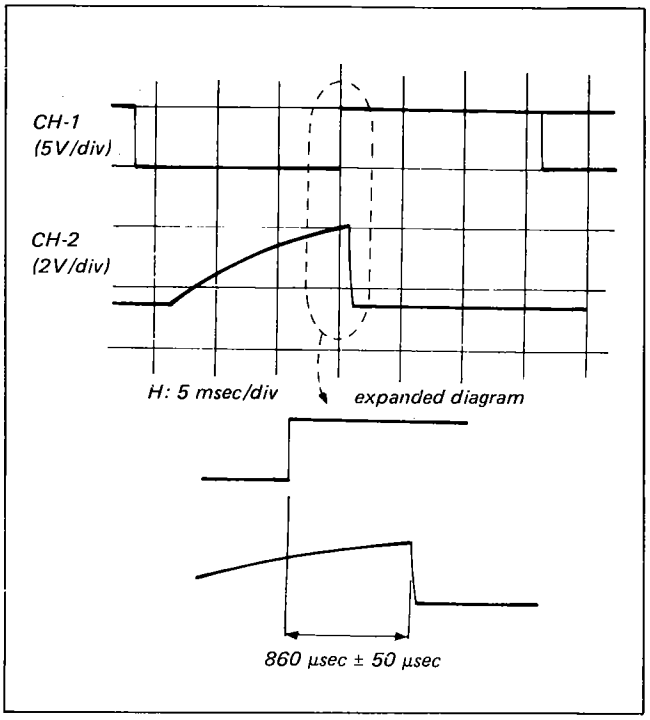
[Connections]

1) Playback

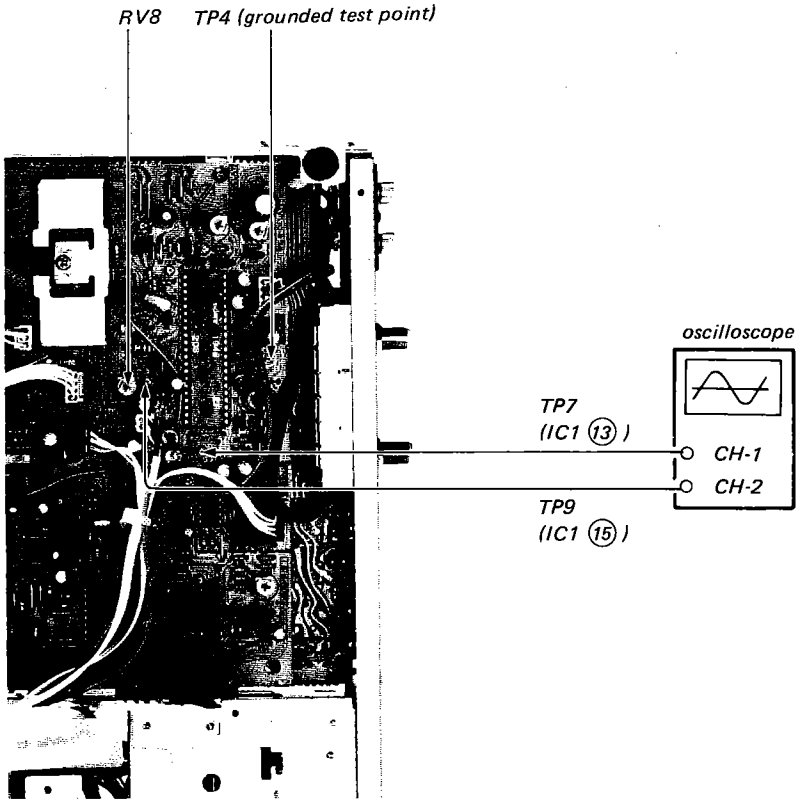


[Method of adjustment]

1) Play the βIII color bar signal or monoscope signal on the alignment tape.
2) Adjust RV8 until the interval shown in the diagram below becomes 860 μsec ± 50 μsec.



[Adjustment point: servo section (SS-25 board)]



5-4. VIDEO SYSTEM ADJUSTMENTS

As a rule the playback system is adjusted using the alignment tape. When it has been confirmed that the playback system is normal. the recording system is adjusted.
The order in which the adjustments are performed is given below. Both Y signal system adjustments and chrominance signal system adjustments are necessary for both the playback system and the recording system.
The color video signal supplied from the pattern generator is used as the video input signal for adjusting the video system in recording mode. Confirm that the synchronization signal and the color burst signal meet the standards specified under "setup at the time of adjustment".

Playback system

1. Playback frequency characteristics adjustment
2. Dropout compensation sensitivity adjustment
3. Playback emphasis adjustment
4. Noise canceler II adjustment
5. 3.58 MHz oscillation frequency adjustment
6. VCO free frequency adjustment (AFC circuit)
7. Skew oscillation adjustment (0.5_H compensation circuit)
8. AGC adjustment (0.5_H compensation circuit)
9. Delay level adjustment (0.5_H compensation circuit)
10. Delay phase adjustment (0.5_H compensation circuit)
11. Delay color signal level adjustment (0.5_H compensation circuit)

Recording system

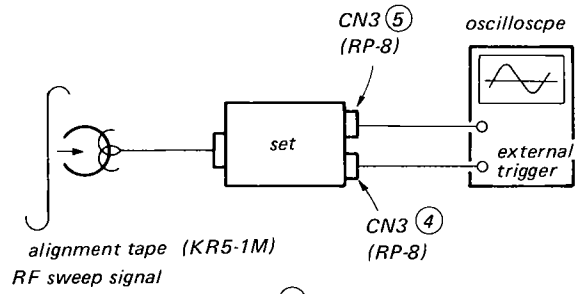
12. Peak AGC and sync AGC adjustments
13. Comb filter adjustment
14. Sync tip carrier frequency setting and FM deviation adjustment
15. 1/2 f_H shift adjustment
16. 4.27 MHz balance adjustment
17. ACC adjustment (automatic color amplitude)
18. White clip adjustment
19. Black clip adjustment
20. Luminance FM recording current adjustment
21. Color recording current adjustment

[Playback system]

1. Playback Frequency Characteristics Adjustment

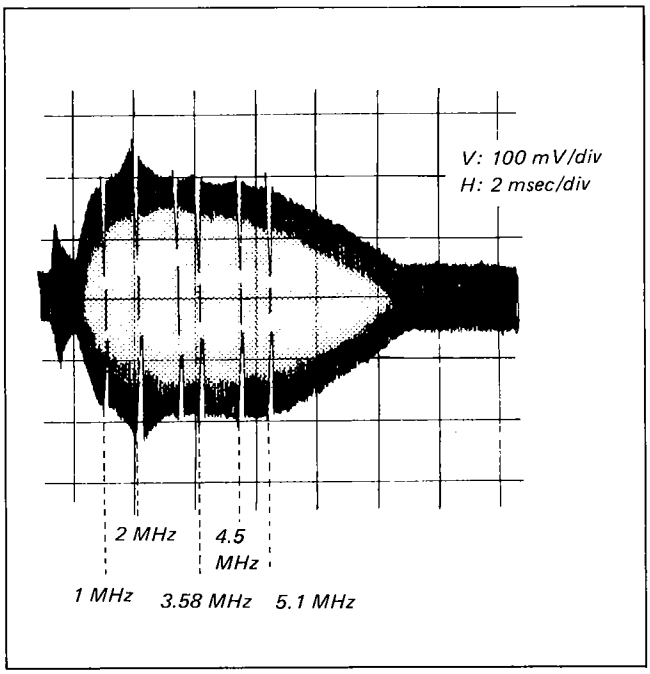
[Connections]

1) Playback

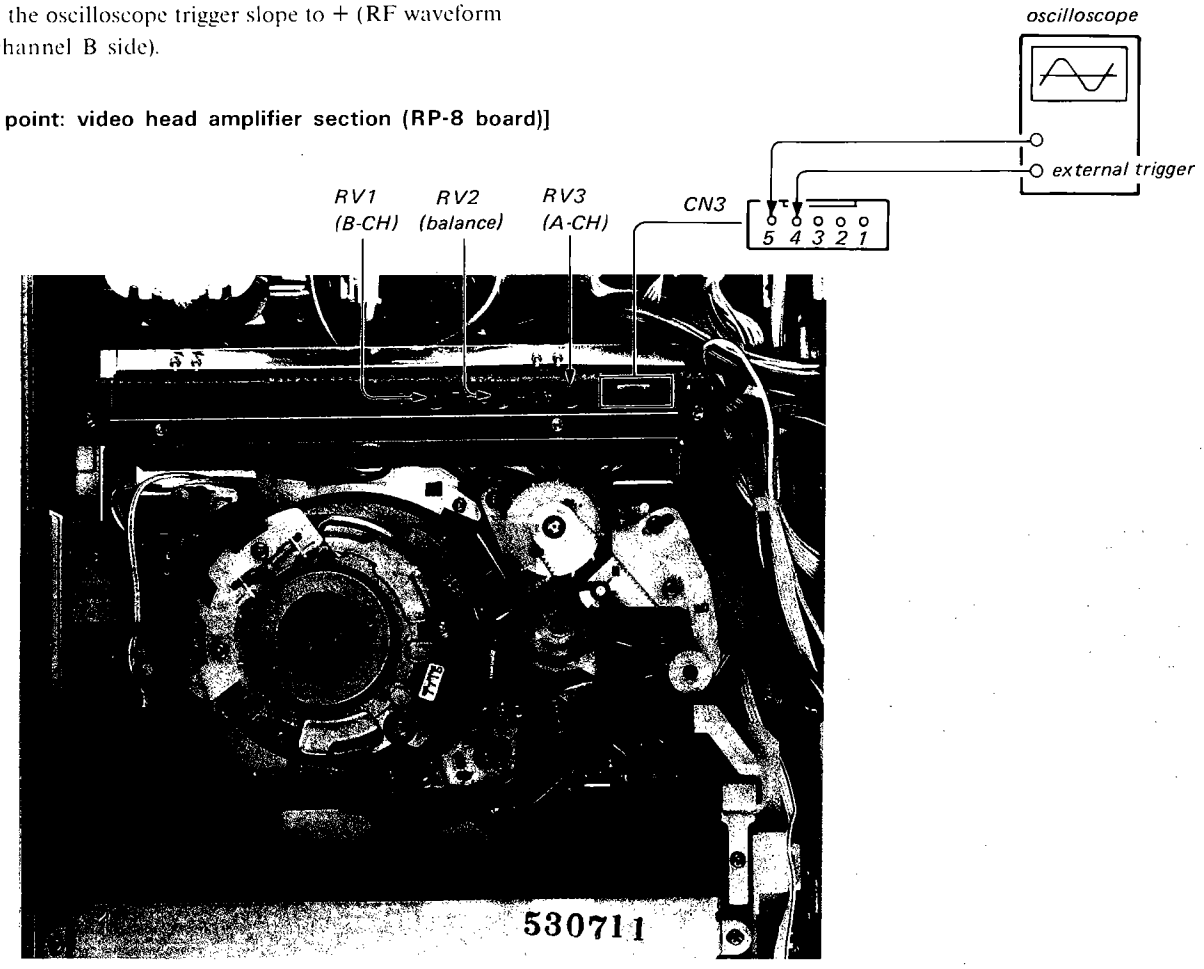


[Method of adjustment]

1) Play the RF sweep signal on the alignment tape. Adjust the tracking knob until the RF signal output waveform level becomes a maximum.
2) Set the oscilloscope trigger slope to − (RF waveform on the channel A side).
3) Adjust RV3 until the RF waveform is flat in the range of 2 MHz to 4.5 MHz, and at 5.1 MHz it is only slightly below the level at 3.5 MHz.
4) Next, set the oscilloscope trigger slope to + (RF waveform on the channel B side).
5) Adjust RV1 until the RF waveform is flat from 2 MHz to 4.5 MHz, and the level at 5.1 MHz is just slightly below that at 3.58 MHz.
6) Adjust the balance using RV2 until the levels at 4.5 MHz are equal on channel A and channel B.



[Adjustment point: video head amplifier section (RP-8 board)]



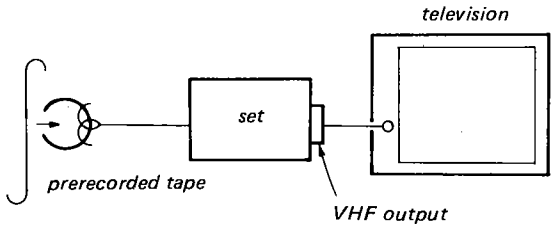
2. Dropout Compensation Sensitivity Adjustment

[Condition]

The PCM switch must be OFF.

[Connections]

1) Playback



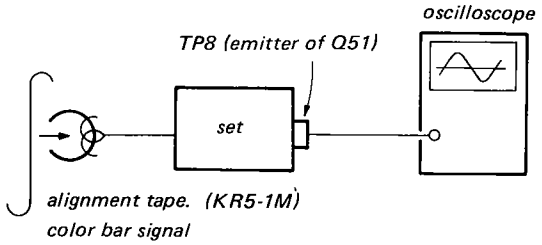
[Method of adjustment]

1) Play a section of the prerecorded tape on which there are many dropouts.
2) Turn RV6 counterclockwise (many dropouts will appear)
3) Turn RV6 clockwise slowly and set it at the point at which the dropouts can no longer be seen (if it is turned too far counterclockwise the picture will disappear.
4) Rewind the tape and play it again. Confirm that the dropouts are being compensated for on the section on which many dropouts were seen in step 2).
5) Turn the PCM switch ON and confirm that this removes the compensation.

3. Playback Emphasis Adjustment

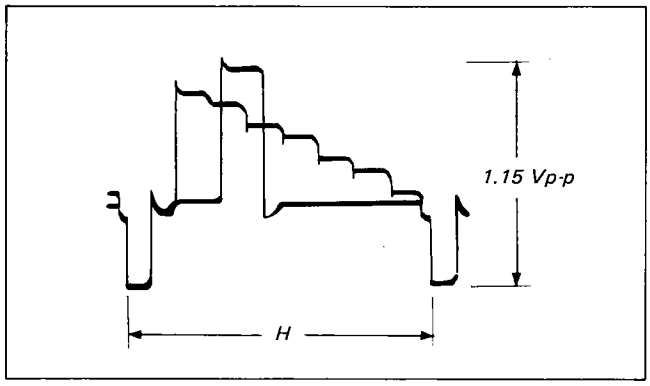
[Connections]

1) Playback

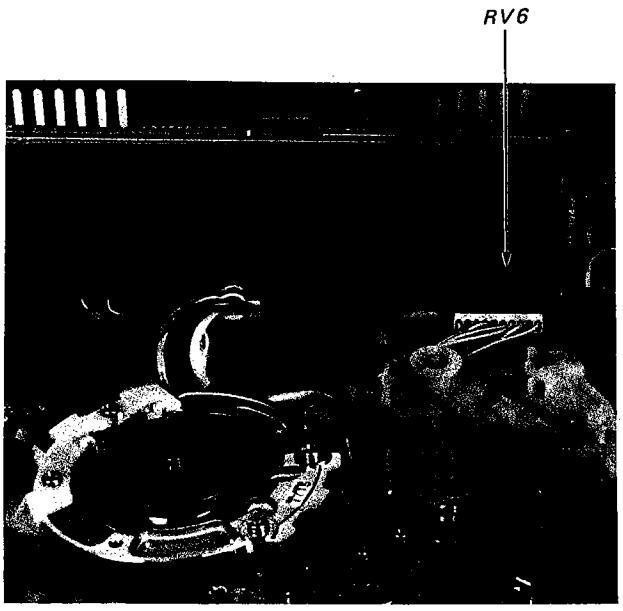


[Method of adjustment]

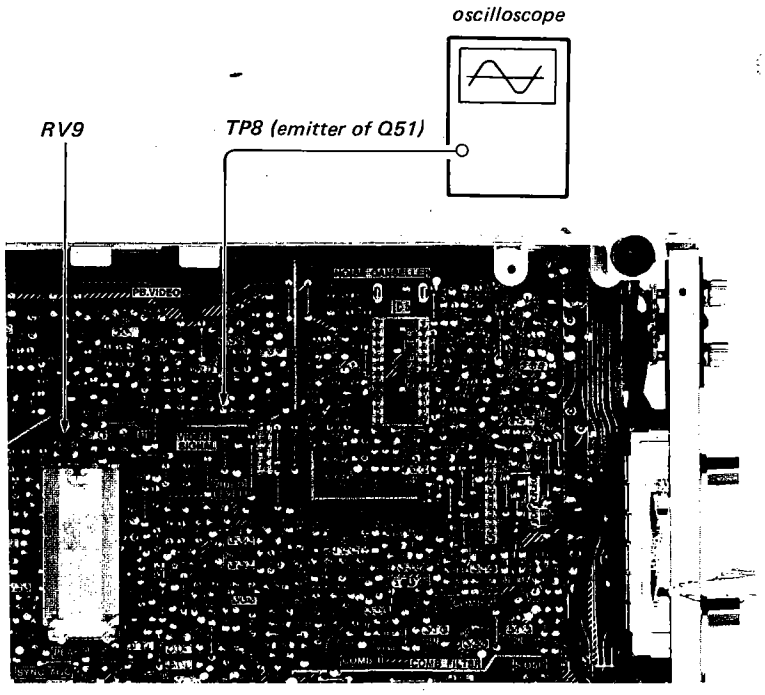
1) Play the color bar signal on the alignment tape.
2) Adjust the tracking knob to the position at which the tracking is best.
3) Adjust RV9 until the amplitude shown in the diagram below is 1.15 Vp-p.



[Adjustment point: video head amplifier section(RP-8 board)]



[Adjustment point: video section (YC-27 board)]



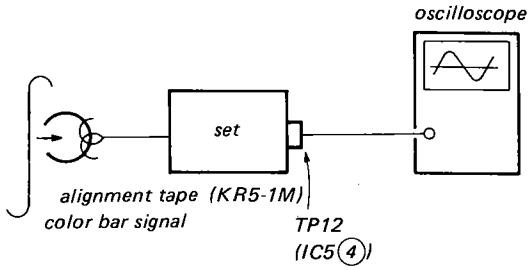
4. Noise Canceler II Adjustment

[Condition]

After this adjustment is completed, do the "playback emphasis adjustment" in section 3, then repeat the noise canceler II adjustment.

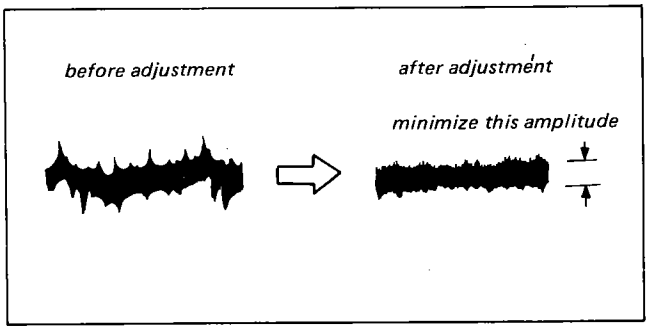
[Connections]

1) Playback

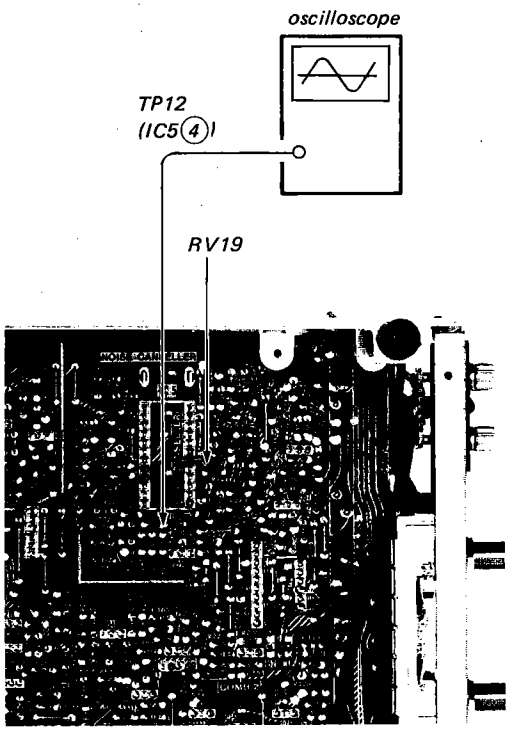


[Method of adjustment]

1) Play the color bar signal on the alignment tape.
2) Adjust RV19 until the output becomes a minimum.



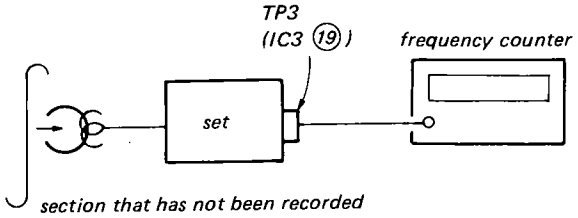
[Adjustment point: video section (YC-27 board)]



5. 3.58 MHz Oscillation Frequency Adjustment

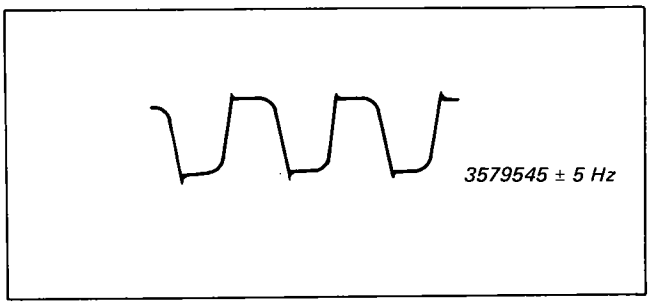
[Connections]

1) Playback

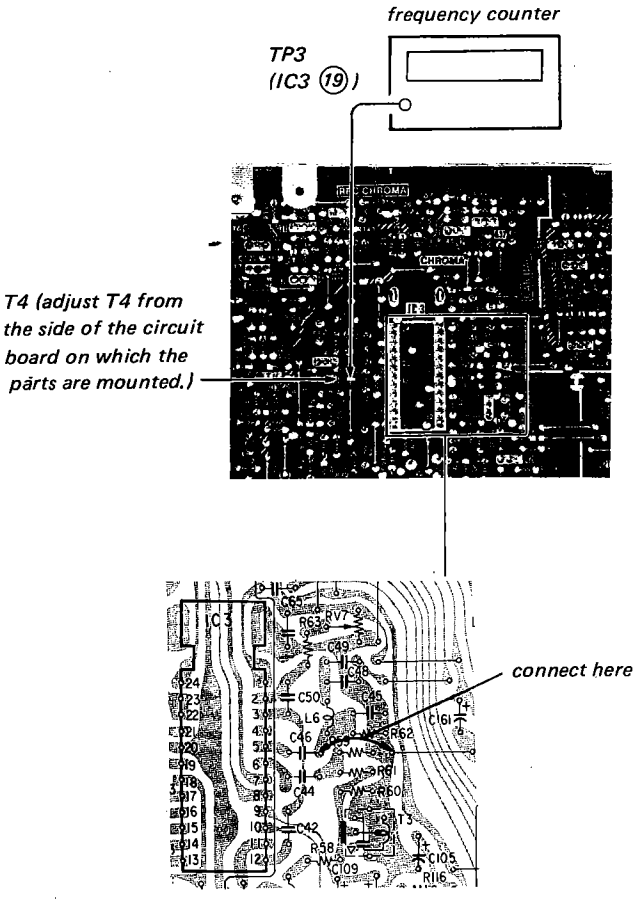


[Method of adjustment]

1) Play a tape on which nothing has been recorded (or alternatively ground the junction of C45 and C46 to cut the color signal out).
2) Adjust T4 until the frequency becomes 3579545 Hz ± 5 Hz.



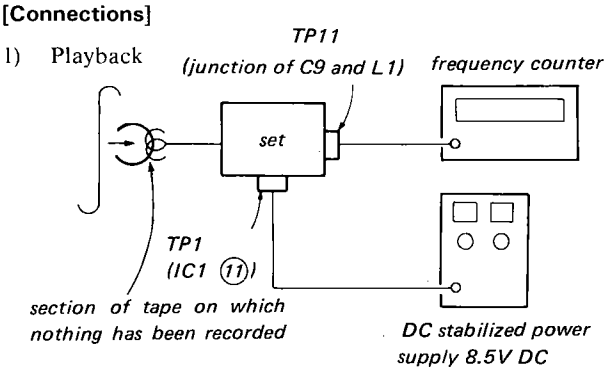
[Adjustment point: video section (YC-27 board)]



6. VCO Free Frequency Adjustment (AFC Circuit)

[Connections]

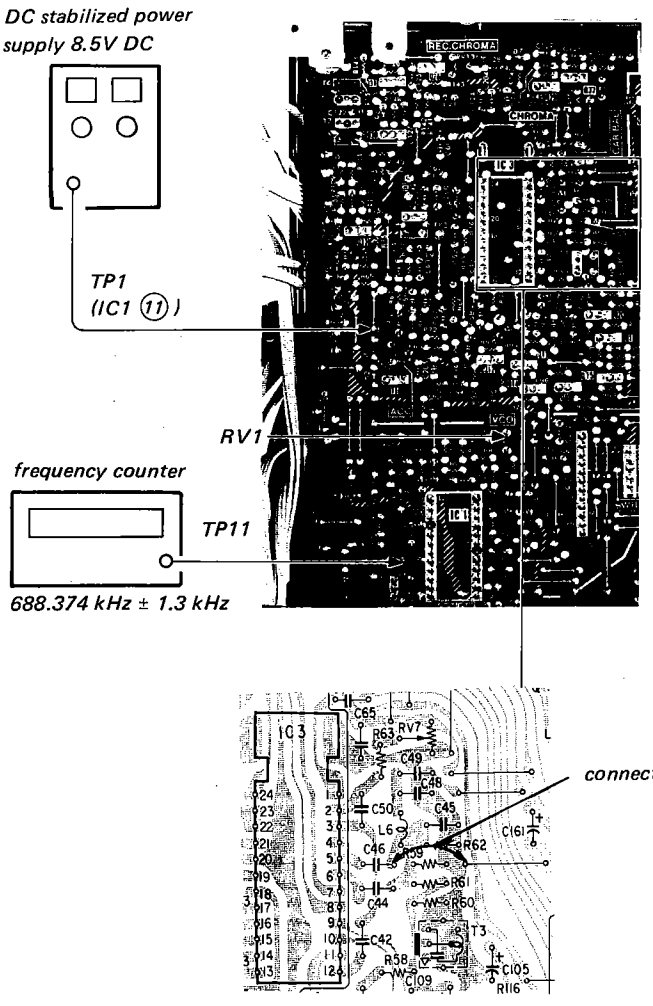
1) Playback



[Method of adjustment]

1) Apply 8.5V to TP1 (terminal No.⑪ of IC1) from the DC stabilized power supply.
2) Play a tape on which nothing has been recorded (or alternatively ground the junction of C45 and C46 to cut the reproduced color signal out).
3) Adjust RV1 until the frequency becomes 688.374 kHz ± 1.3 kHz.

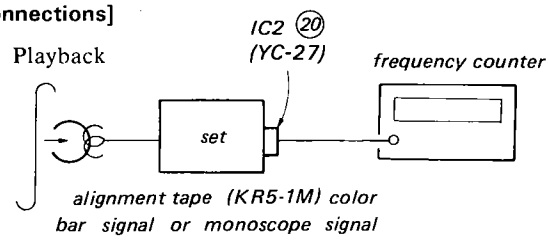
[Adjustment point: video section (YC-27 board)]



7. Skew Oscillation Adjustment (0.5_H Compensation Circuit)

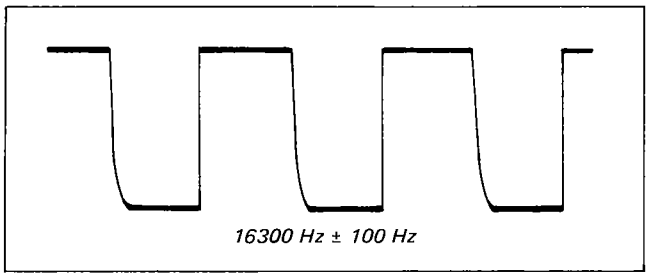
[Connections]

1) Playback

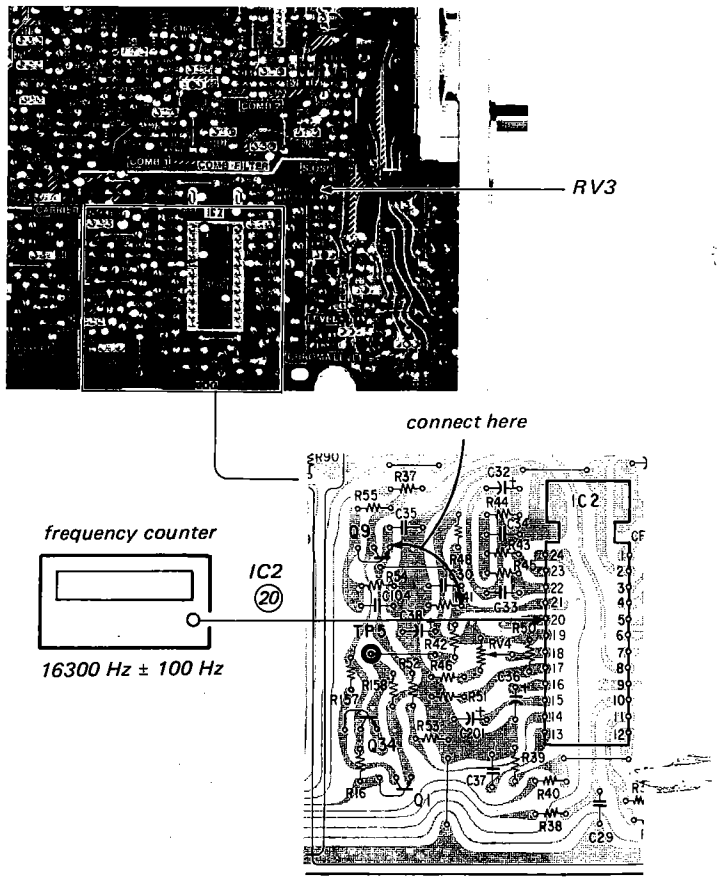


[Method adjustment]

1) Connect a lead wire between the emitter of Q9 (the 9V power supply line) and terminal No. ㉑ of IC2.
2) Play the color bar signal or the monoscope signal on the alignment tape.
3) Adjust RV3 until the reading on the frequency counter becomes 16.3 kHz ± 100 Hz.



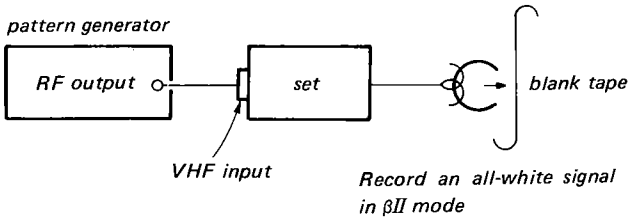
[Adjustment point: video section (YC-27 board)]



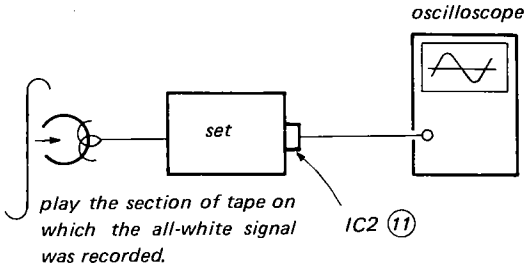
8. AGC Adjustment (0.5_H Compensation Circuit)

[Connections]

1) Recording

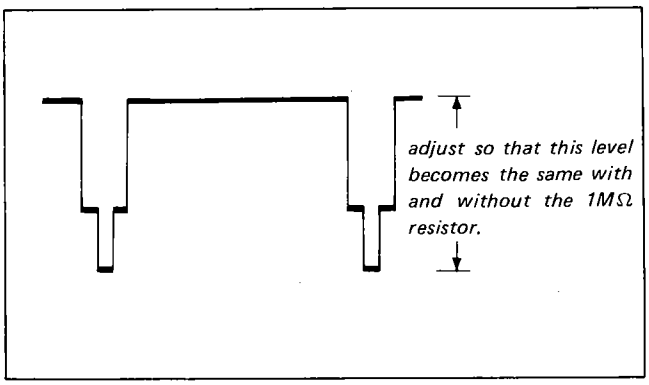


2) Playback

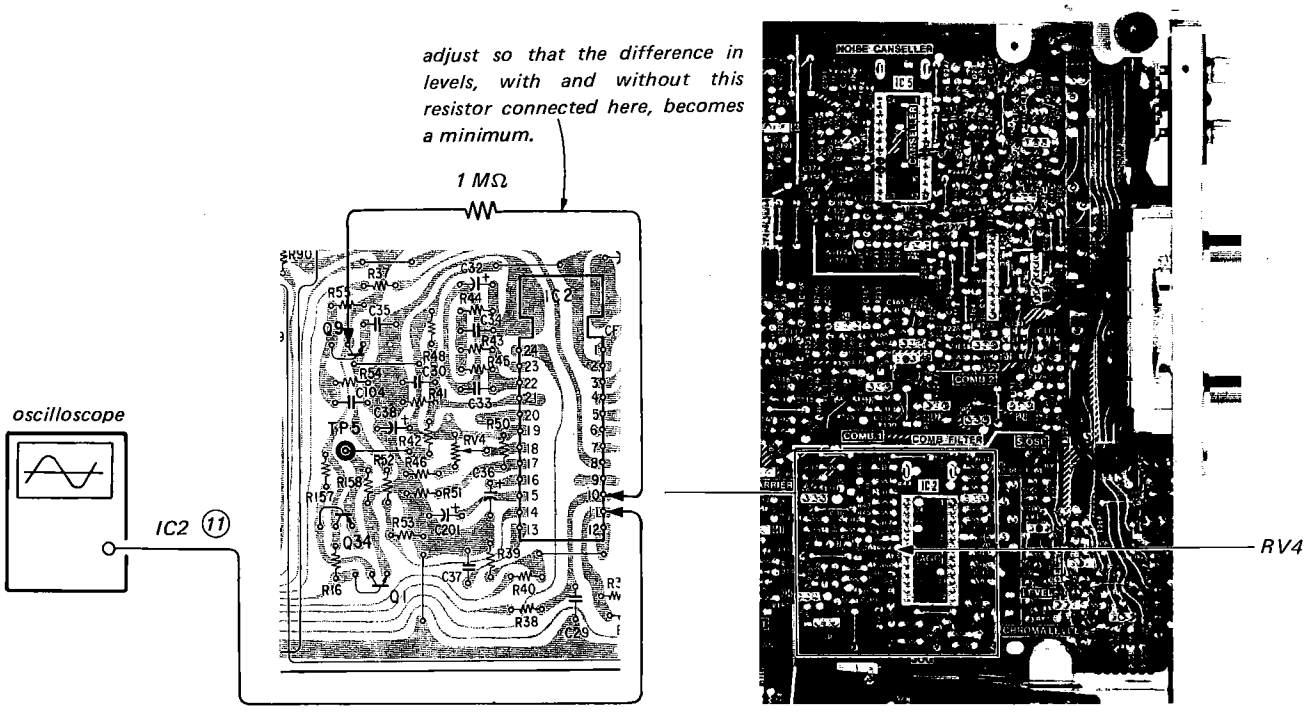


[Method of adjustment]

1) Record an all-white signal in βII mode to produce a tape with all white recorded on it.
2) Play back the section of tape on which the all-white signal was recorded.
3) Adjust RV4 until the difference in levels of the amplitude shown in the diagram below, with and without a 1 MΩ resistor connected between the collector of Q9 (the 12V power supply line) and terminal No. ⑩ of IC2 becomes a minimum (0.02V or less).



[Adjustment point: video section (YC-27 board)]



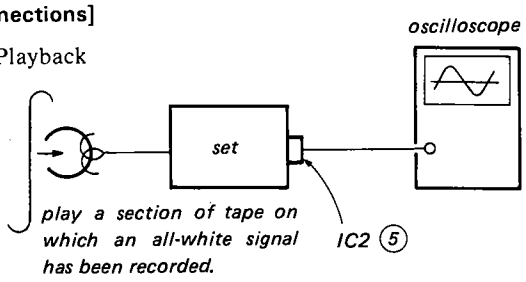
9. Delay Level Adjustment (0.5_H Compensation Circuit)

[Condition]

Adjustments 9 through 11 must be done twice, in the order 9 → 10 → 11 → 9 → 10 → 11.

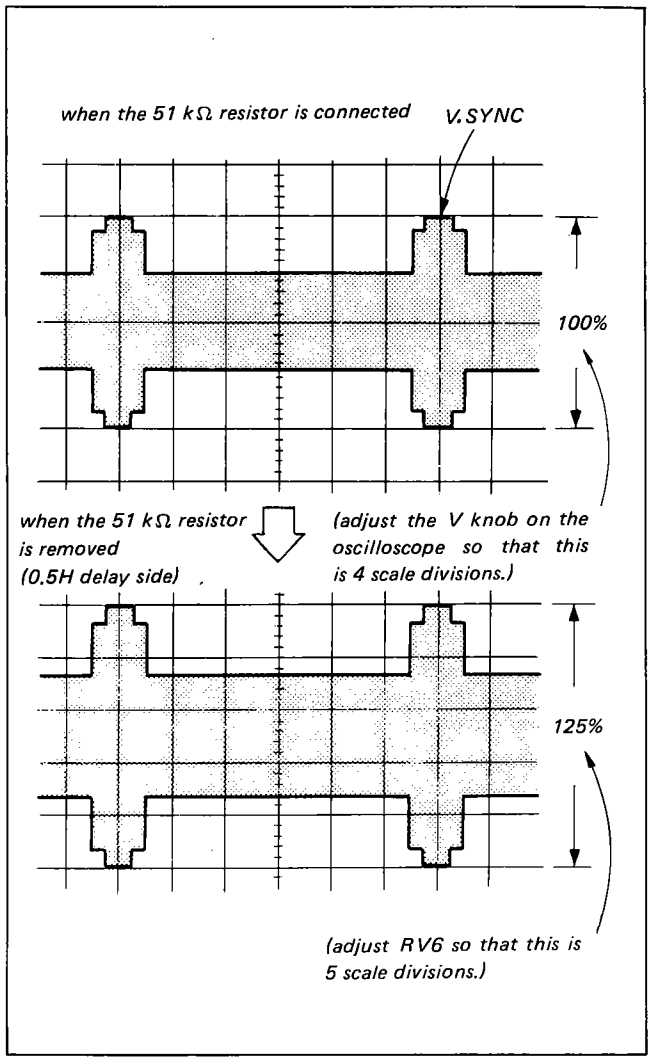
[Connections]

1) Playback

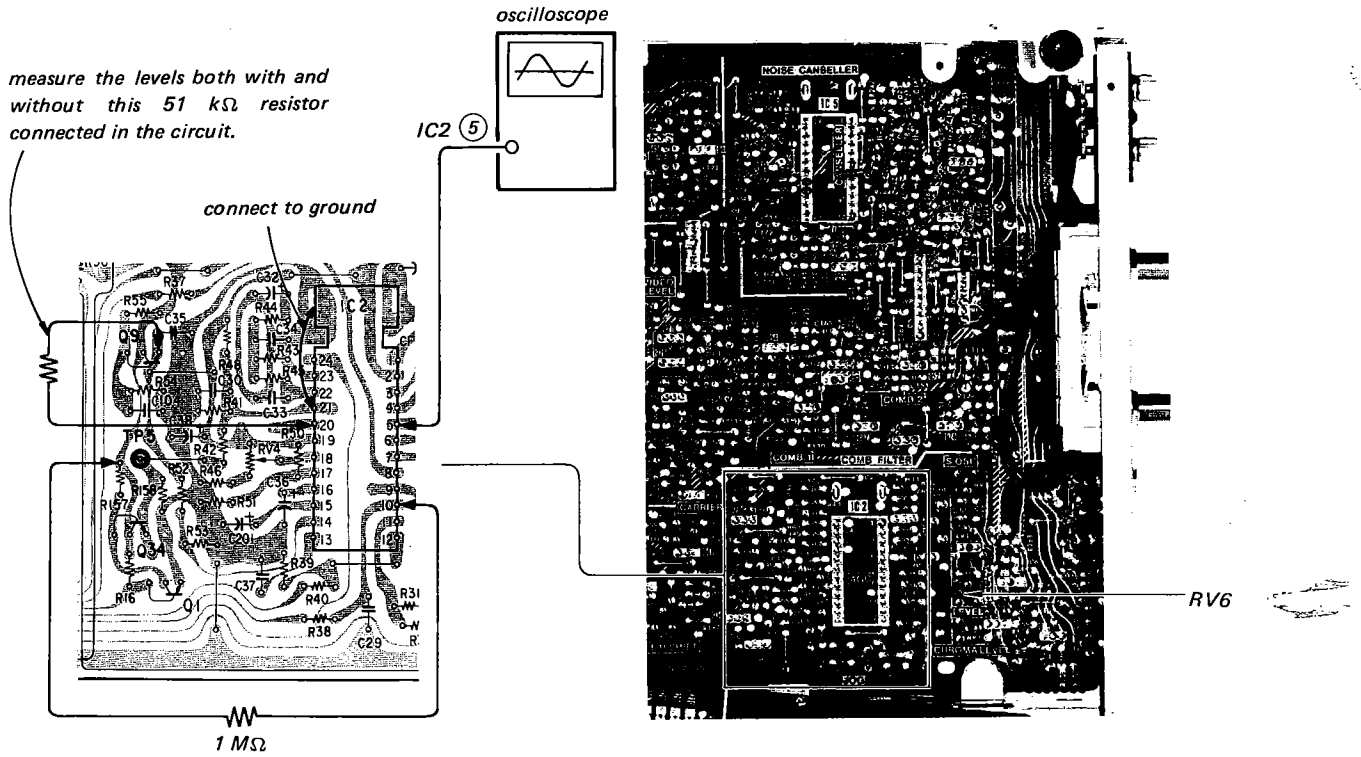


[Method of adjustment]

1) Connect a 1 MΩ resistor between the collector of Q9 (the 12V power supply line) and terminal No. (10) of IC2.
2) Connect terminal No. (21) of IC2 to ground.
3) Play a section of tape on which an all-white signal has been recorded.
4) Measure the peak-to-peak amplitudes (see diagram at right) both with and without a 51 kΩ resistor connected between the emitter of Q9 (the 9V power supply line) and terminal No. (20) of IC2.
5) Adjust RV6 so that the amplitude measured without the 51 kΩ resistor in the circuit is 1.25 times that measured with the resistor in the circuit. A convenient way to do this is by adjusting the V knob on the oscilloscope so that the peak value at the V. SYNC position is 4 scale divisions; then with the resistor removed it should be 5 scale divisions.



[Adjustment point: video section (YC-27 board)]



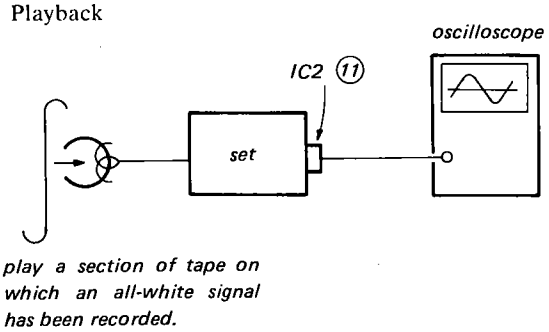
10. Delay Phase Adjustment (0.5_H Compensation Circuit)

[Condition]

Adjustments 9 through 11 must be done twice, in the order 9 → 10 → 11 → 9 → 10 → 11.

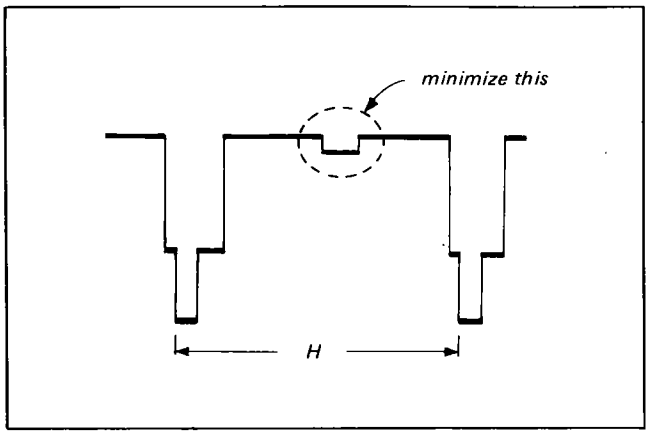
[Connections]

1) Playback

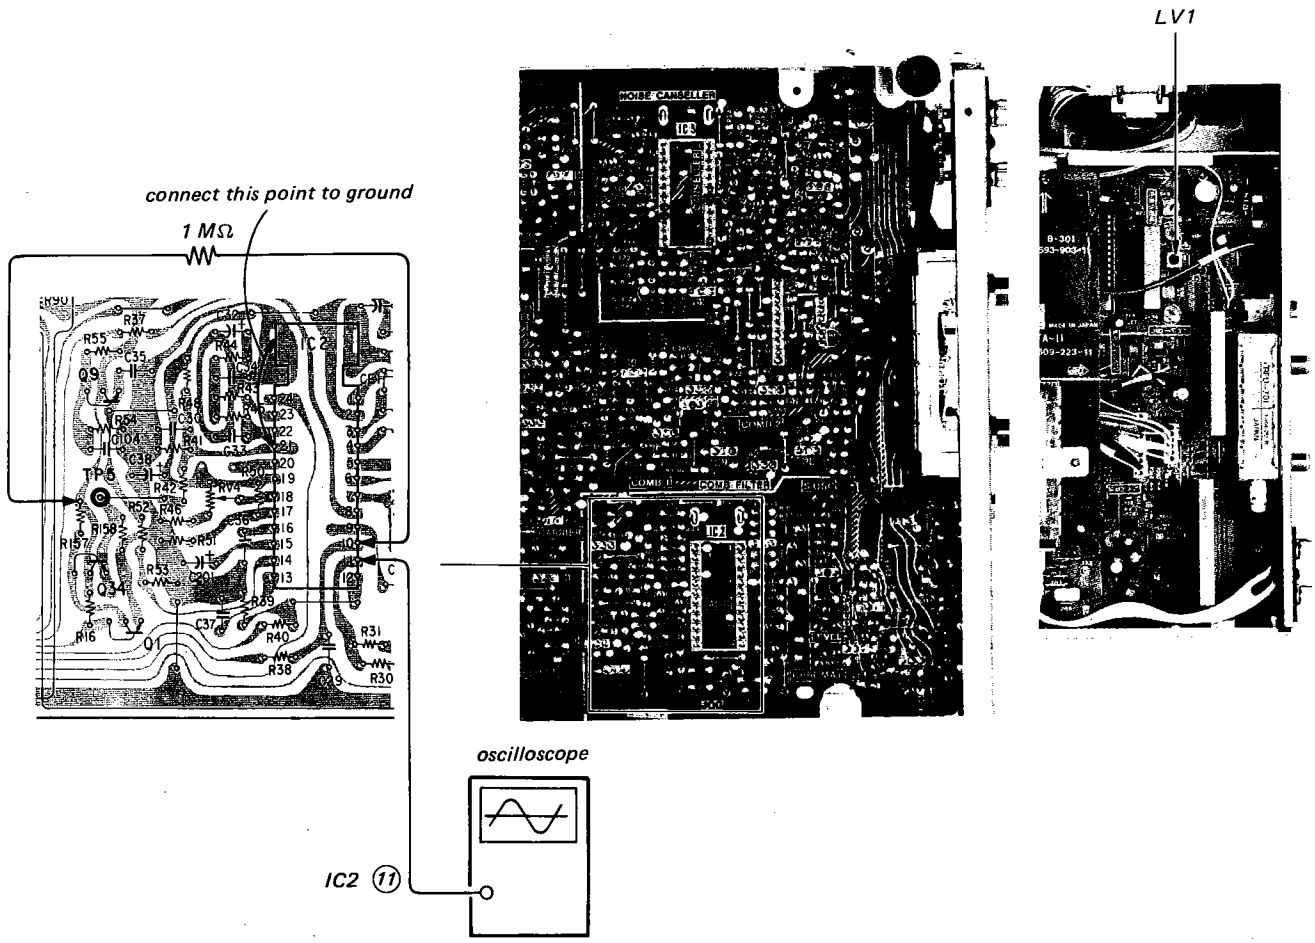


[Method of adjustment]

1) Connect a 1 MΩ resistor between the collector of Q9 (12V power supply line) and terminal No. (10) of IC2.
2) Connect terminal No. (21) of IC2 to ground.
3) Play a section of tape on which an all-white signal has been recorded.
4) Adjust LV1 so that the fuzziness due to the horizontal synchronization signal that appears in the central part of the waveform becomes a minimum.



[Adjustment point: video section (YC-27 board)]



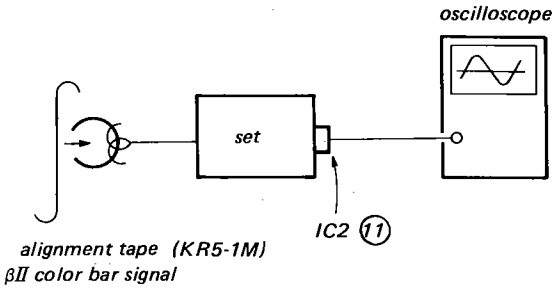
11. Delay Color Signal Level Adjustment (0.5_H Compensation Circuit)

[Condition]

Adjustments 9 through 11 must be done twice, in the order 9 → 10 → 11 → 9 → 10 → 11.

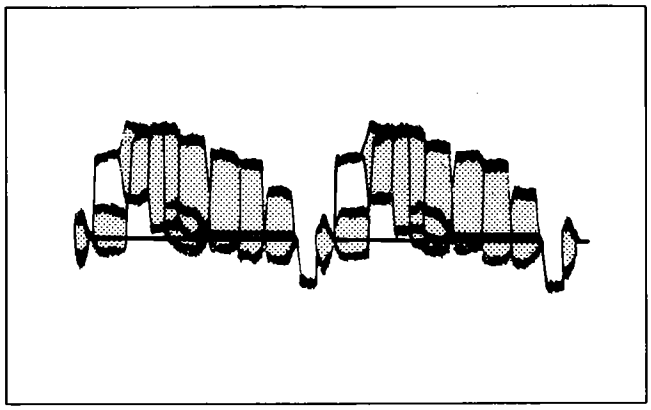
[Connections]

1) Playback

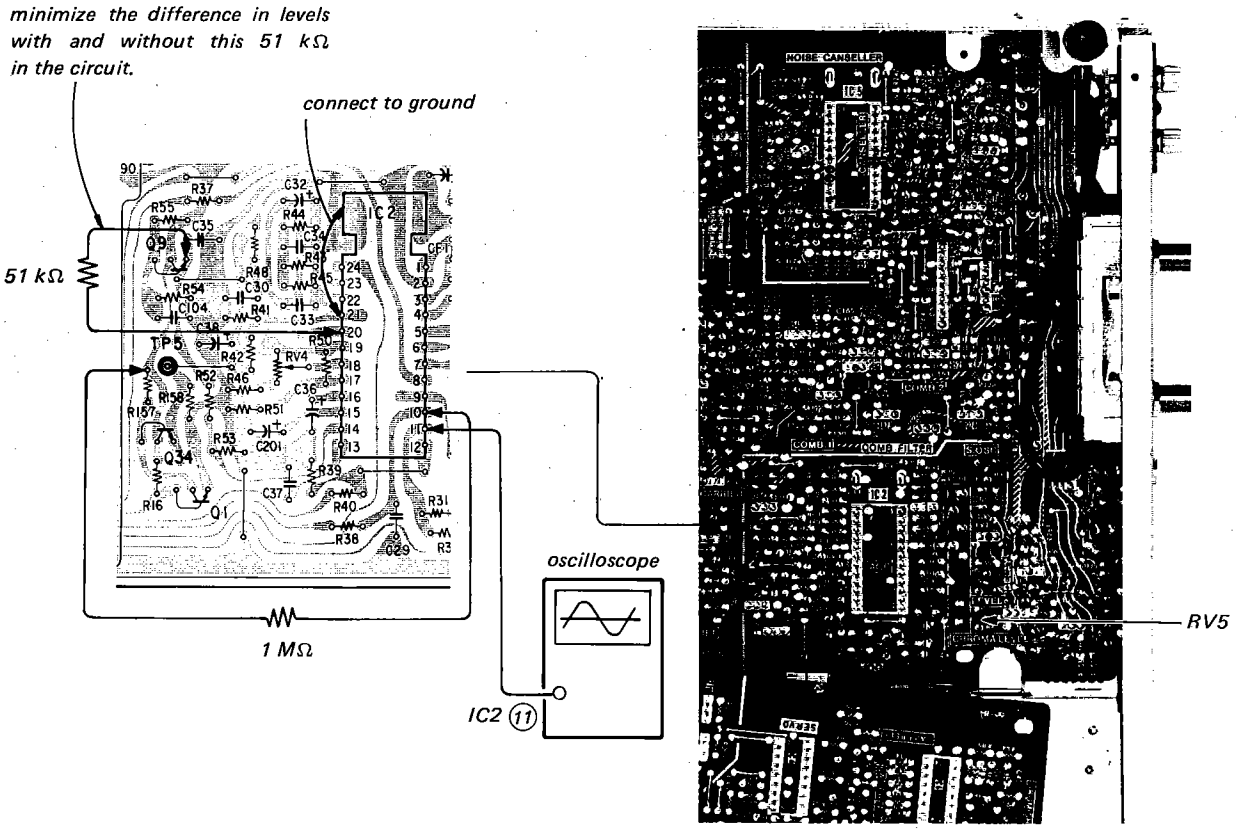


[Method of adjustment]

1) Connect a 1 MΩ resistor between the collector of Q9 (the 12V power supply line) and terminal No. (10) of IC2.
2) Connect terminal No. (21) of IC2 to ground.
3) Play the βII color bar signal on the alignment tape.
4) Connect a 51 kΩ resistor between the emitter of Q9 (the 9V power supply line) and terminal No. (20) of IC2, and measure the amplitudes of the color signal with and without this resistor in the circuit. Then adjust RV5 so that the difference between the two amplitudes becomes a minimum.



[Adjustment point: video section (YC-27 board)]

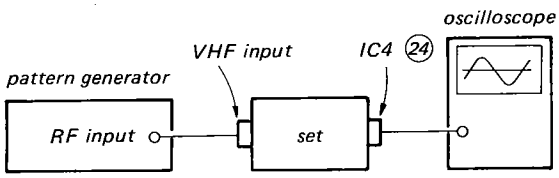


[Recording system]

12. Peak AGC and Sync AGC Adjustments

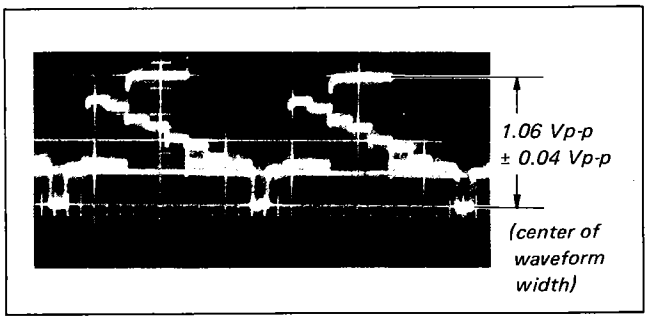
[Connections]

1) E-E mode

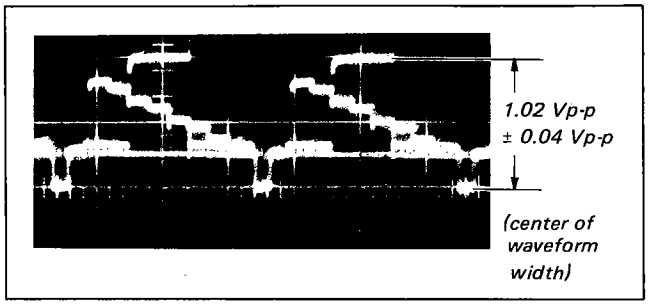


[Method of adjustment]

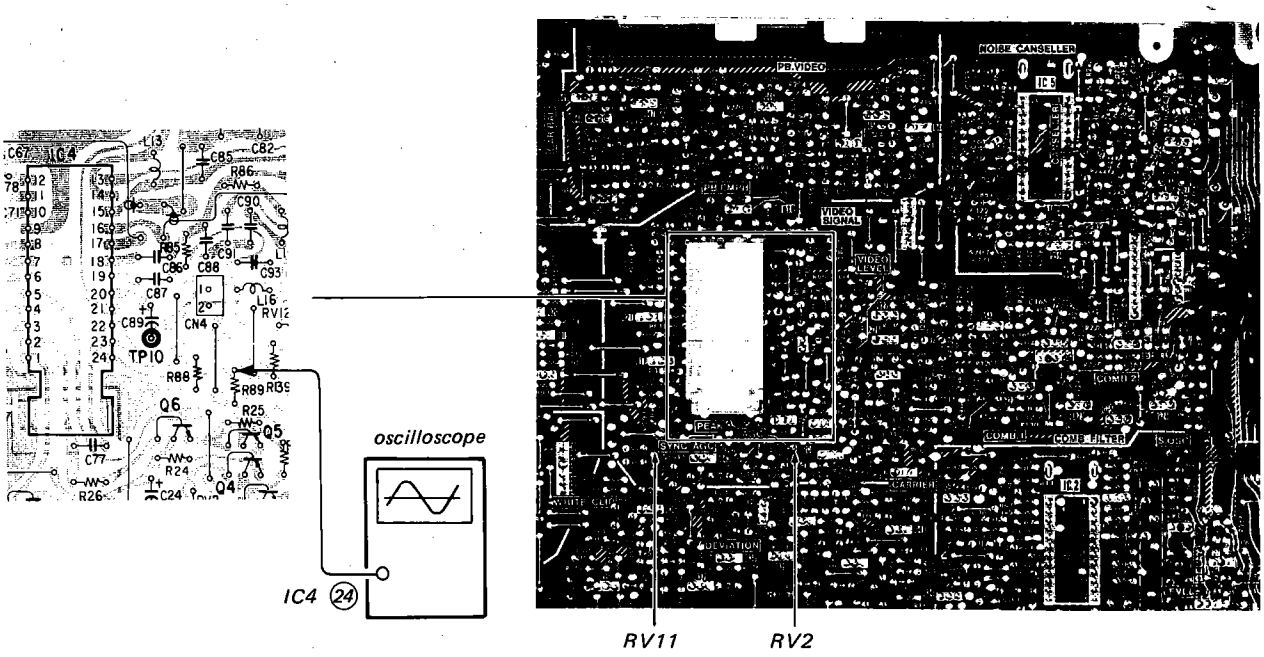
1) Supply a color bar signal with the chrominance signal removed (in other words a black-and-white signal) from the pattern generator.
2) Turn RV11 counterclockwise until the level shown in the figure at the right is a maximum.
3) Adjust RV2 (the peak AGC) until the level becomes 1.06 Vp-p ± 0.04 Vp-p.



4) Adjust RV11 (the sync AGC) until the level becomes 1.02 Vp-p ± 0.04 Vp-p.



[Adjustment point: video section (YC-27 board)]

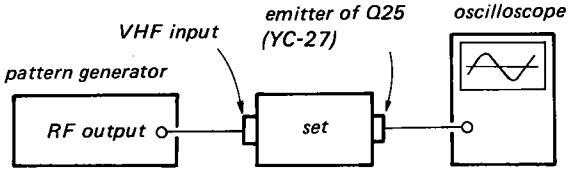


13. Comb Filter Adjustment

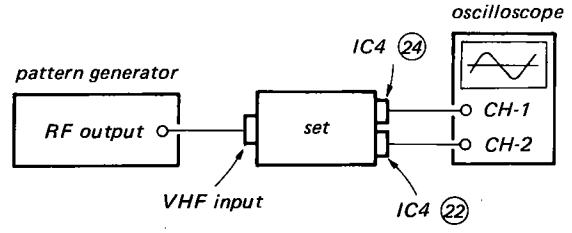
[Adjustment point: video section (YC-27 board)]

[Connections]

1) Recording

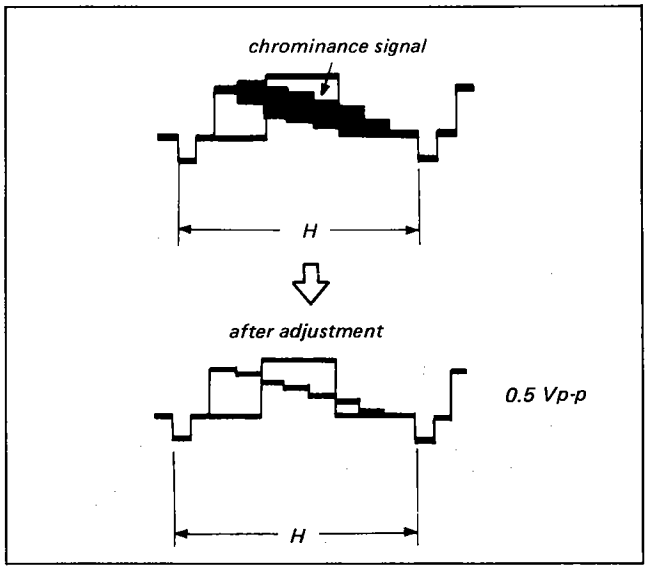


2) Recording

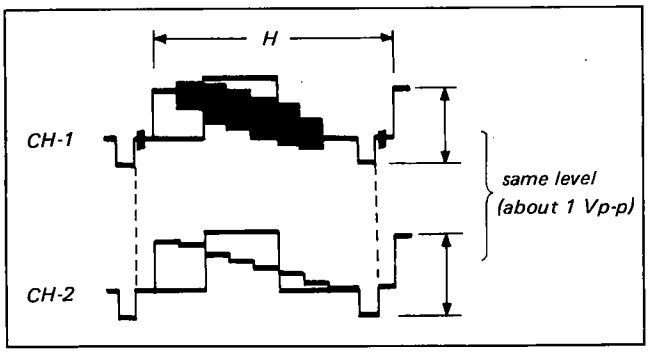


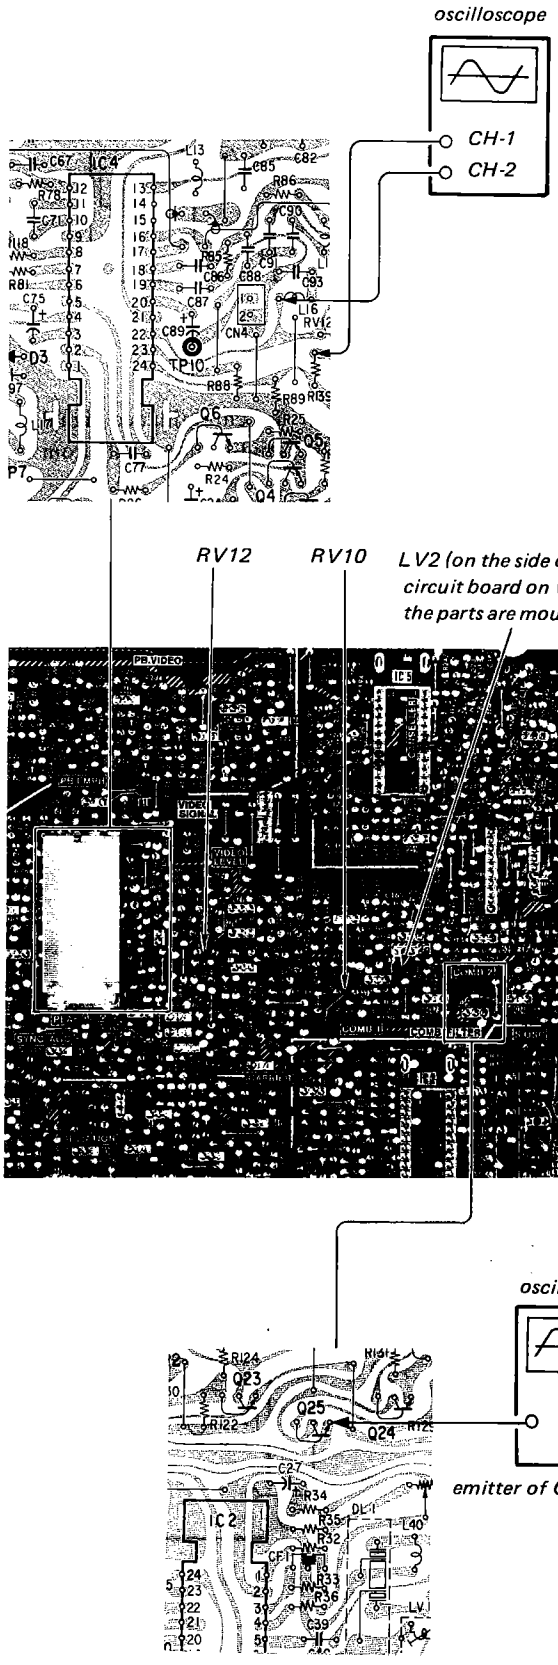
[Method of adjustment]

1) Input a color bar signal and put the set in recording mode.
2) Connect the oscilloscope to the emitter of Q25 and then adjust LV2 and RV10 alternately until the chrominance signal is a minimum.



3) Adjust RV12 until the video signal levels at terminal No. (24) of IC4 and terminal No. (22) of IC4 are equal (video amplitude adjustment).

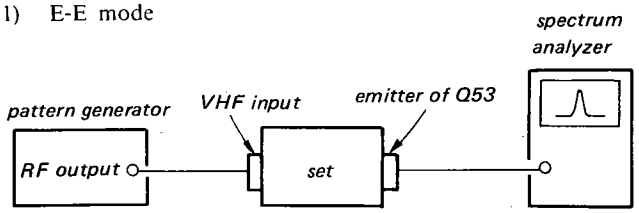




14. Sync Tip Carrier Frequency Setting and FM Deviation Adjustment

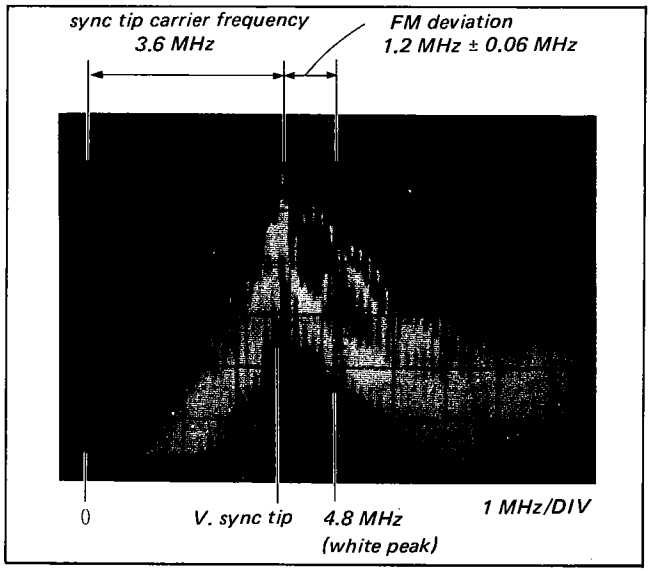
[Connections]

1) E-E mode

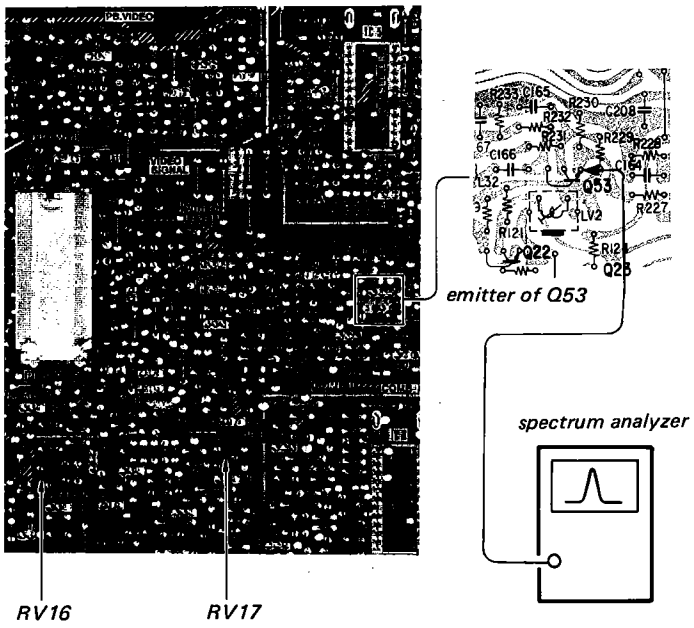


[Method of adjustment]

1) Supply a color bar signal, and put the set into E-E (direct picture) mode.
2) Observe the frequency distribution, and adjust RV17 and RV16 alternately until the sync tip carrier frequency and FM deviation fall within their respective standard ranges.



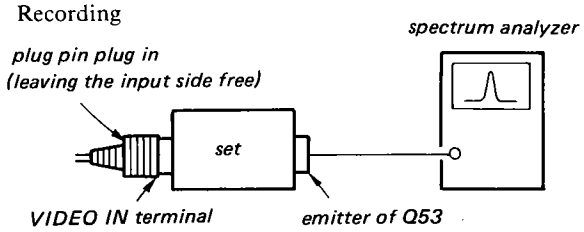
[Adjustment point: video section (YC-27 board)]



15. 1/2 f_H Shift Adjustment

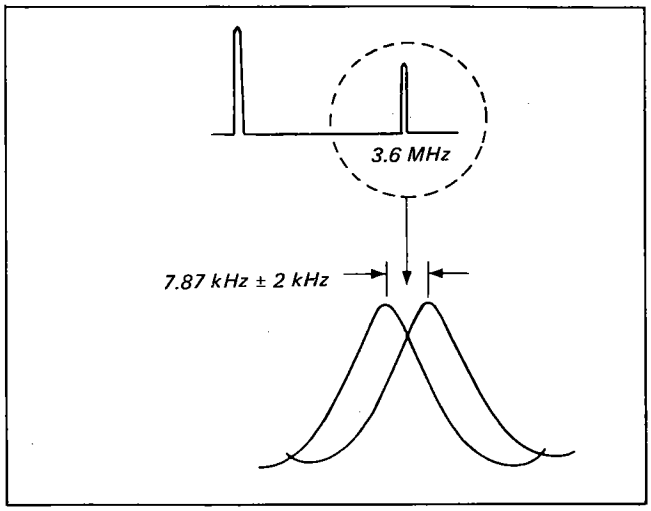
[Connections]

1) Recording

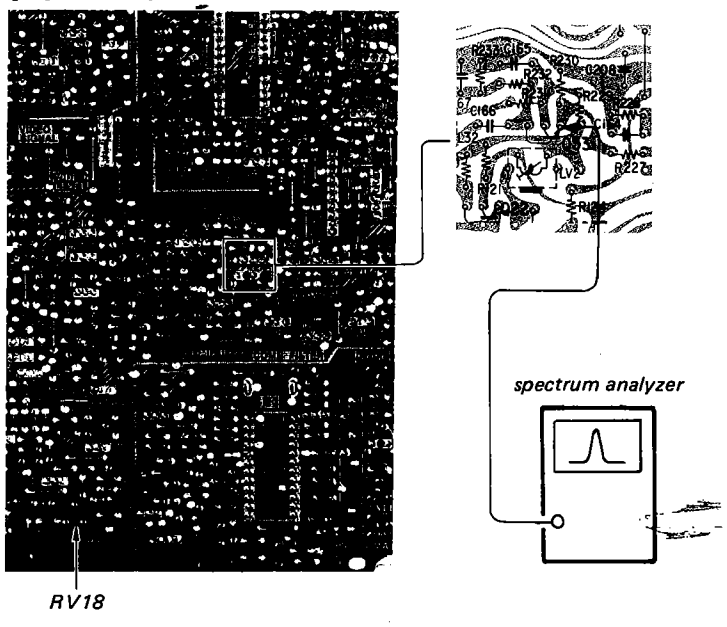


[Method of adjustment]

1) Plug a pin plug into the video input terminal (leaving the input side of the plug free), and put the set into recording mode without any signal input.
2) Adjust RV18 until the shift of the FM wave comes to 7.87 kHz ± 2 kHz.



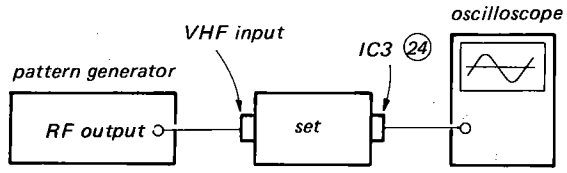
[Adjustment point: video section (YC-27 board)]



16. 4.27 MHz Balance Adjustment

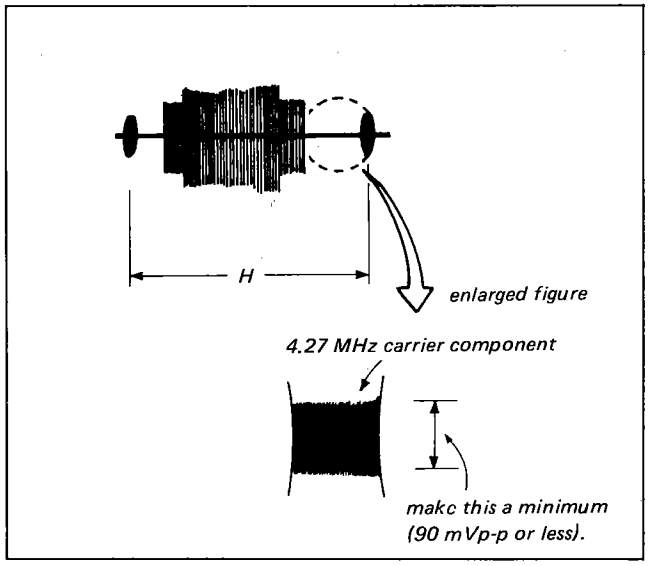
[Connections]

1) E-E mode

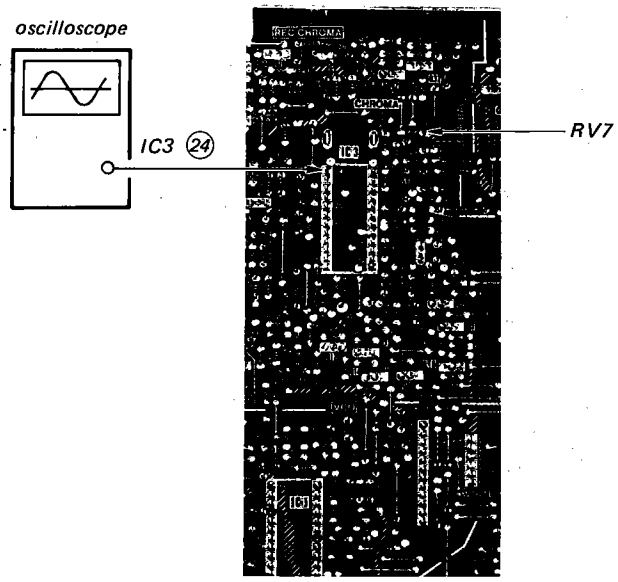


[Method of adjustment]

1) Supply a color bar signal, and put the set into E-E (direct picture) mode.
2) Adjust RV7 until the amplitude of the 4.27 MHz component is a minimum.



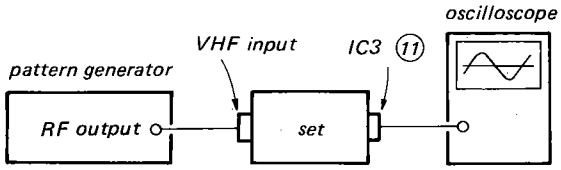
[Adjustment point: video section (YC-27 board)]



17. ACC Adjustment

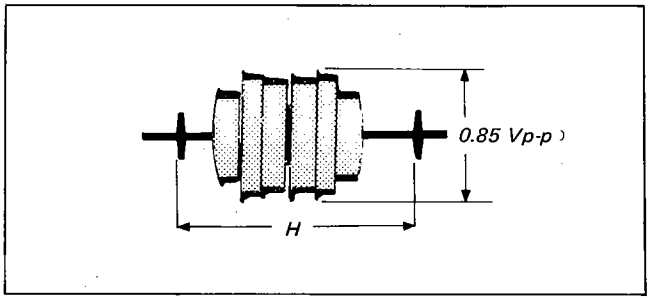
[Connections]

1) E-E mode

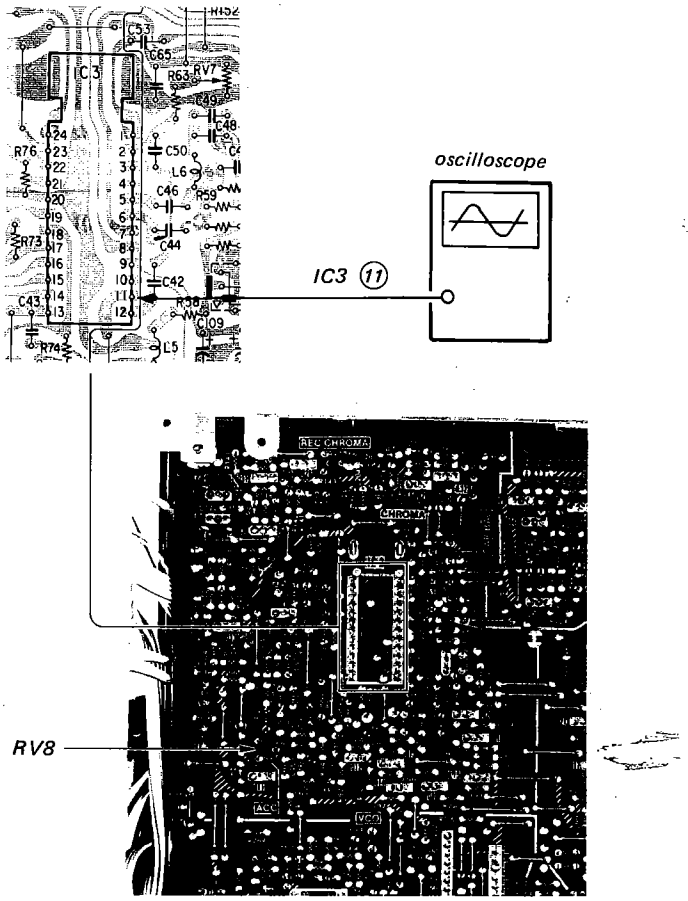


[Method of adjustment]

1) Supply a color bar signal, and put the set into E-E (direct picture) mode.
2) Adjust RV8 until the chrominance level is 0.85 Vp-p ± 0.05 Vp-p.



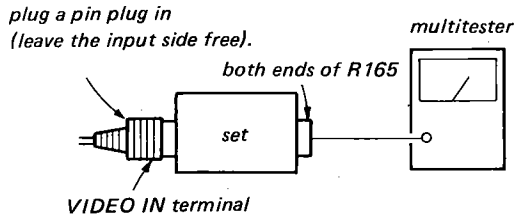
[Adjustment point: video section (YC-27 board)]



18. White Clip Adjustment

[Connections]

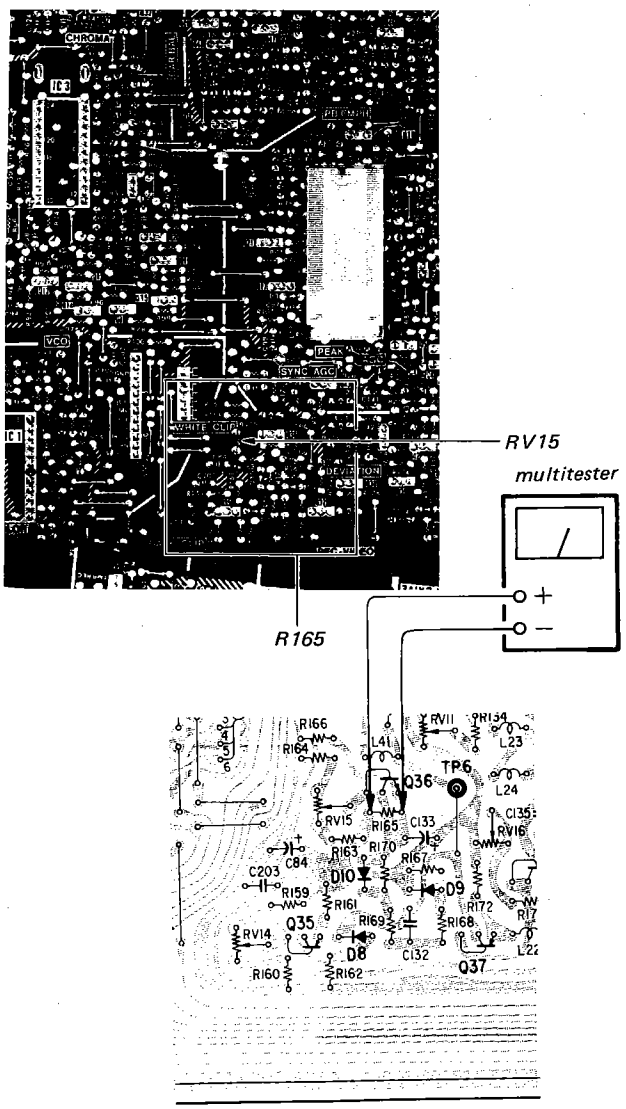
1) E-E mode



[Method of adjustment]

1) Plug a pin plug in to the video input terminal (leave the input side of the plug free), so that there is no signal input.
2) Adjust RV15 so that the voltage at both ends of R165 is 0.20V ± 0.05V.

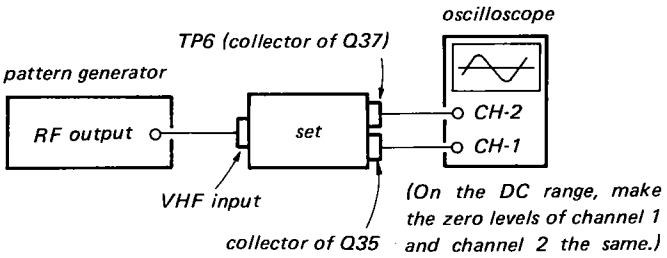
[Adjustment point: video section (YC-27 board)]

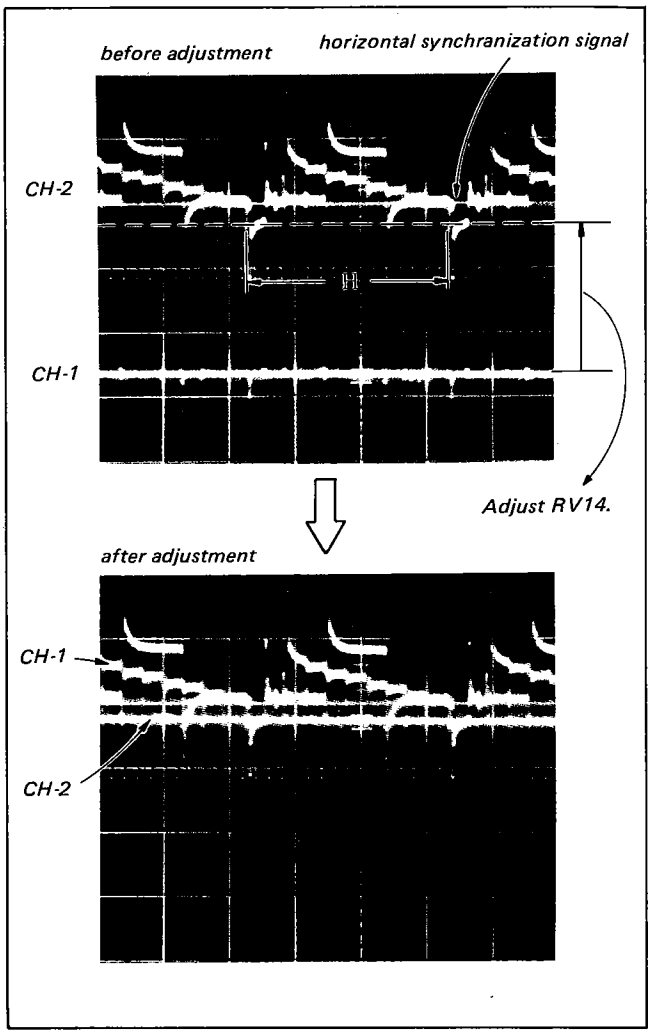


19. Black Clip Adjustment

[Connections]

1) E-E mode

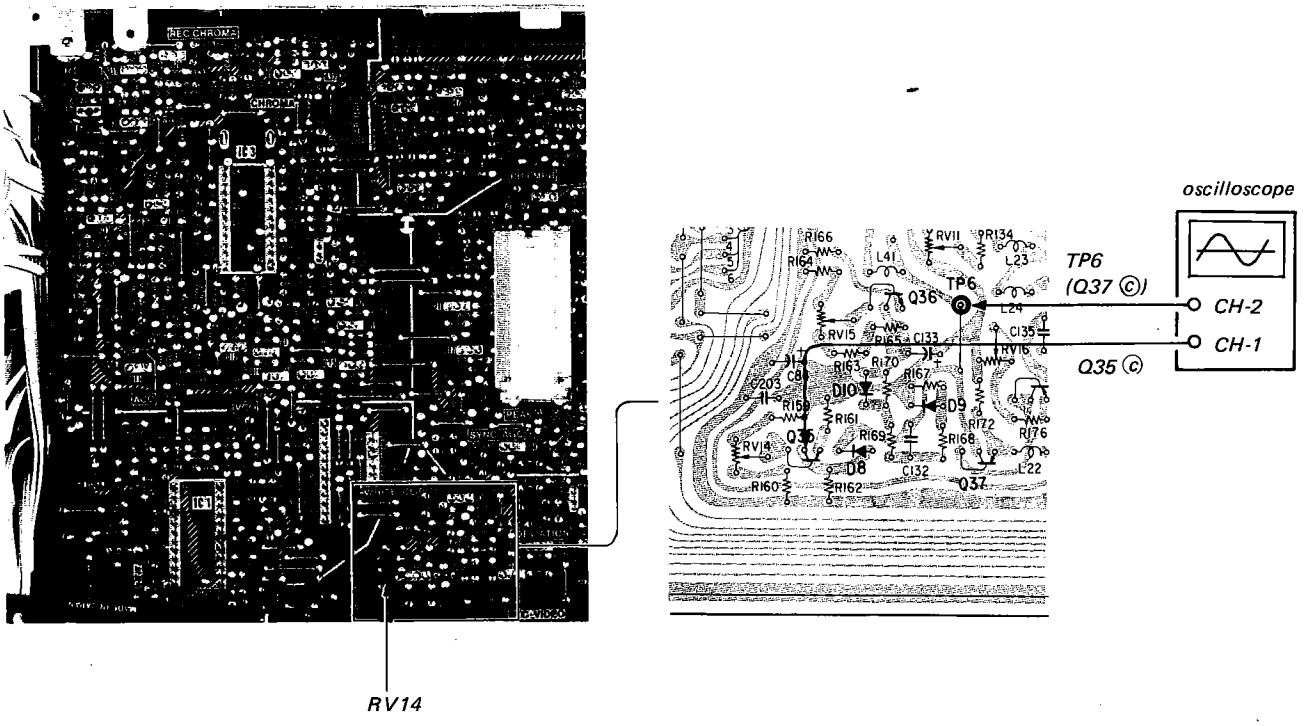




[Method of adjustment]

1) Put the oscilloscope on the DC range, and make zero levels of channel 1 and channel 2 equal to each other.
2) Supply a color bar signal, and put the set into E-E (direct picture) mode.
3) Adjust RV14 so that the voltage at the tip of the horizontal synchronization signal in the waveform on channel 2 equals the DC voltage on channel 1 (the tip of the synchronization signal should be within ±50 mV).

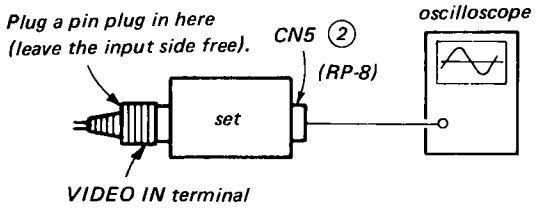
[Adjustment point: video section (YC-27 board)]



20. Luminance FM Recording Current Adjustment

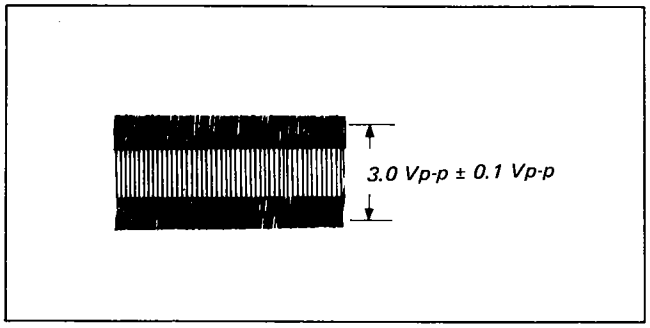
[Connections]

1) Recording

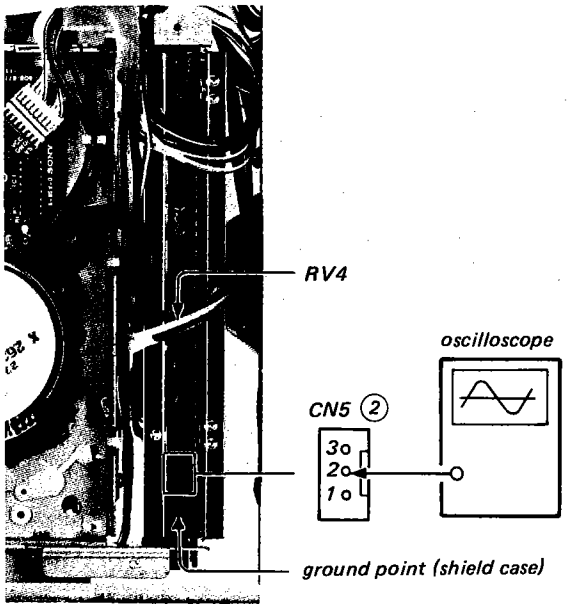


[Method of adjustment]

1) Plug a pin plug in to the video input terminal (leaving the input side of the plug free) so that there is no input signal, and put the set into recording mode.
2) Adjust RV4 until the amplitude shown in the diagram below is 3.0 Vp-p ± 0.1 Vp-p.



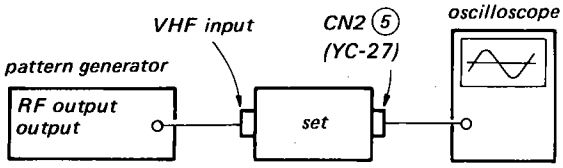
[Adjustment point: video head amplifier section (RP-8 board)]



21. Color Recording Current Adjustment

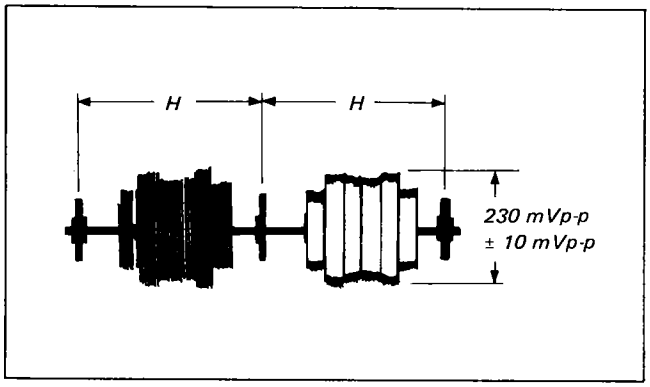
[Connections]

1) E-E mode

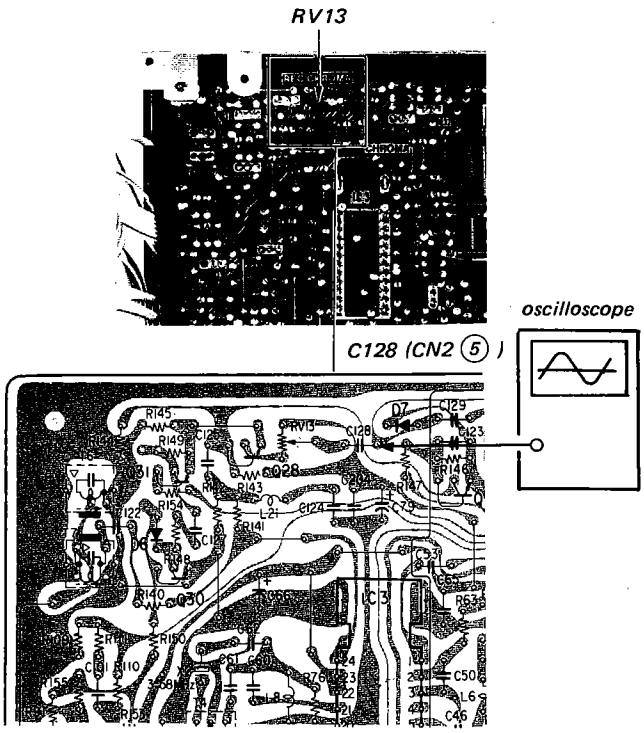


[Method of adjustment]

1) Supply a color bar signal and put the set in E-E (direct picture) mode.
2) Adjust RV13 until the amplitude shown in the diagram below is 230 mVp-p ± 10 mVp-p.



[Adjustment point: video section (YC-27 board)]



5-5. AUDIO SYSTEM ADJUSTMENTS

Use a dynamicron tape to perform these adjustments.

Sequence of adjustments

1. ACE head adjustment . . . refer to the description of mechanical section adjustments.
2. Playback frequency characteristics adjustments
3. Playback output level adjustment
4. Bias trap adjustment
5. Sound recording bias adjustment
6. Sound recording level adjustment
7. Overall level check
8. Overall distortion rate check
9. Overall signal-to-noise ratio check

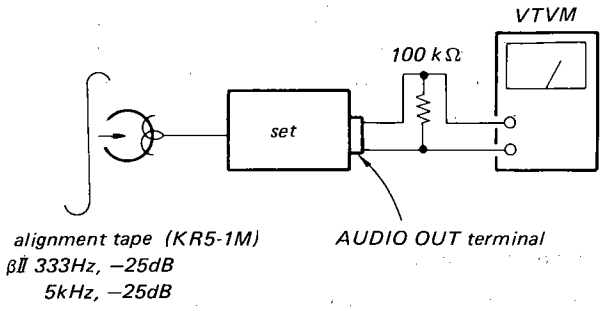
1. ACE Head Adjustment

Refer to the description of mechanical section adjustments.

2. Playback Frequency Characteristics Adjustment

[Connections]

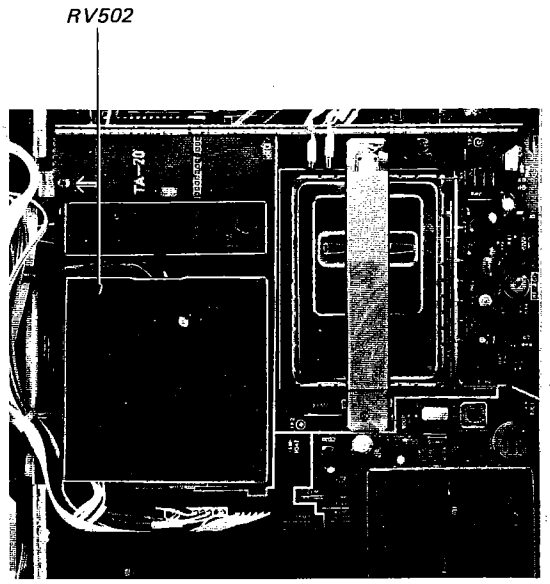
1) Playback



[Method of adjustment]

1) Play the 333 Hz and 5 kHz βII audio signal sections on the alignment tape and measure the respective output levels.
2) Adjust RV502 so that the output level at 5 kHz is within 0 ± 1 dB of the output level at 333 Hz.

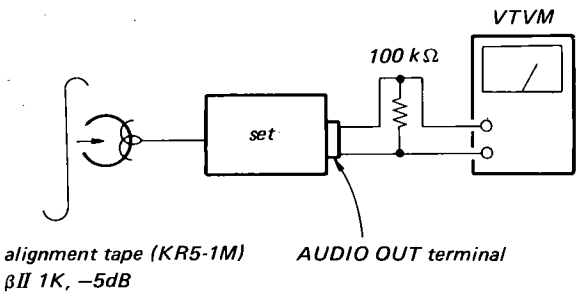
[Adjustment point: audio section (TA-20 board)]



3. Playback Output Level Adjustment

[Connections]

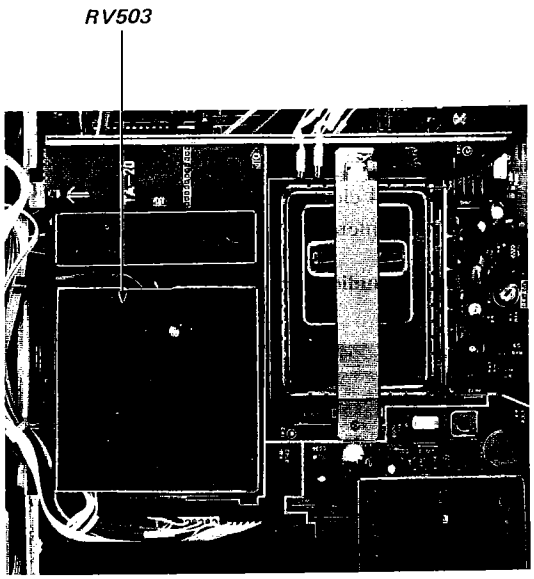
1) Playback



[Method of adjustment]

1) Play the βII 1 kHz audio signal section on the alignment tape and measure the output level.
2) Adjust RV503 until the output level becomes −5 dB (0.44V) $^{+2}_{-4}$ dB.

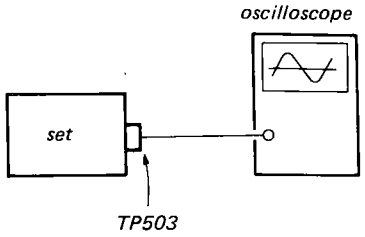
[Adjustment point: audio section (TA-20 board)]



4. Bias Trap Adjustment

[Connections]

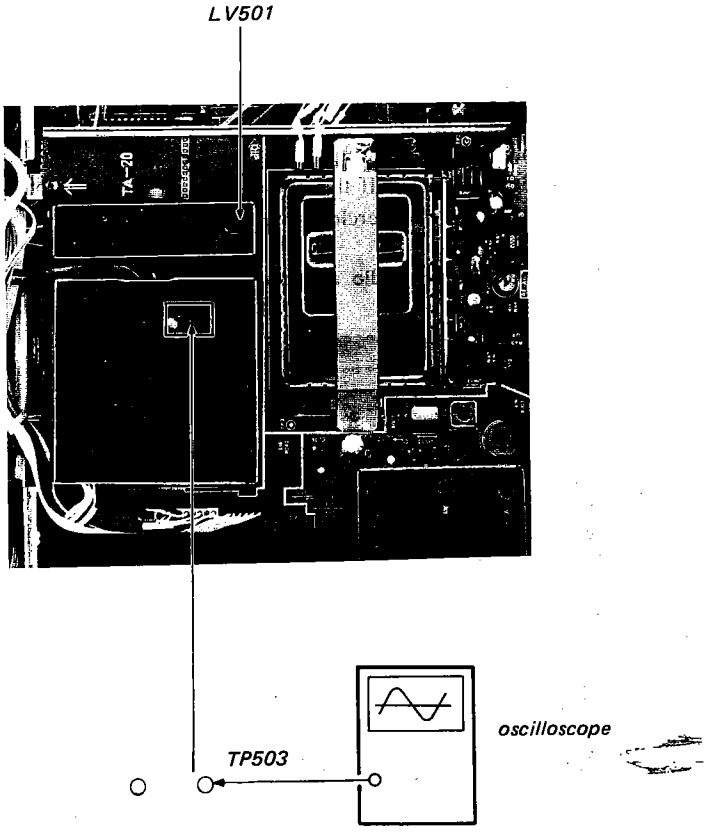
1) Recording



[Method of adjustment]

1) Put the set in recording mode with no signal input.
2) Adjust LV501 until the amplitude of the bias leak waveform becomes a minimum, 1.2 Vp-p or less.

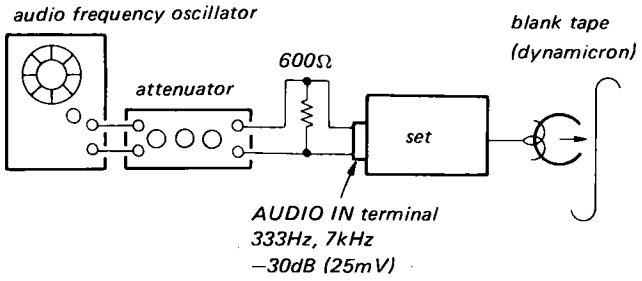
[Adjustment point: audio section (TA-20 board)]



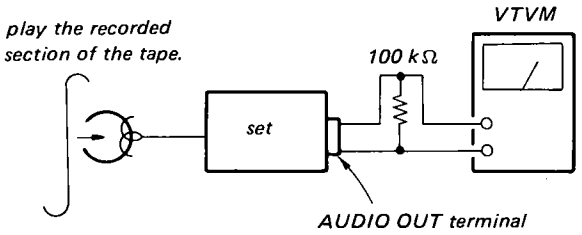
5. Sound Recording Bias Adjustment

[Connections]

1) Recording (βIII mode)



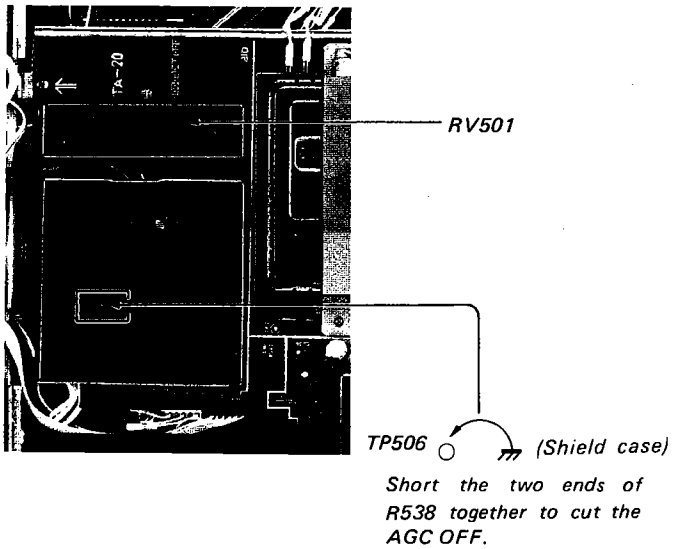
2) Playback



[Method of adjustment]

1) Short the two ends of R538 (TP506 and Ground) together to cut the AGC operation OFF.
2) Apply 333 Hz and 7 kHz, −30 dB (25 mV) signals to the audio input terminal and record them in βIII mode.
3) Play back the recorded section of tape and measure the respective output levels at 333 Hz and 7 kHz.
4) Confirm that the output level at 7 kHz is within ±1.5 dB of the output level at 333 Hz.
5) If the condition is step 4) is not satisfied, repeat steps 2) through 4). If the output level at 7 kHz is too high, turn RV501 clockwise. If the output level at 7 kHz is too low, turn RV501 counterclockwise.

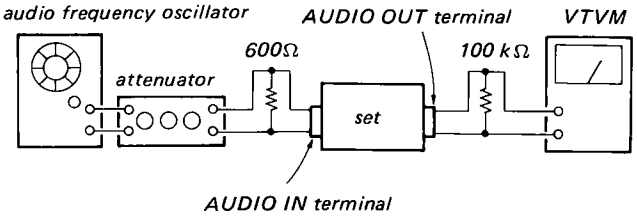
[Adjustment point: audio section (TA-20 board)]



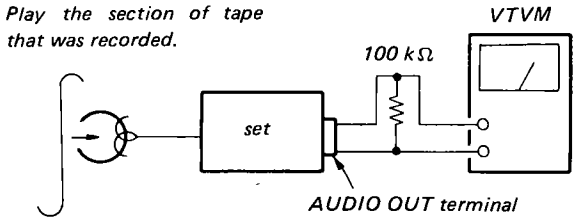
6. Sound Recording Level Adjustment

[Connections]

1) Recording



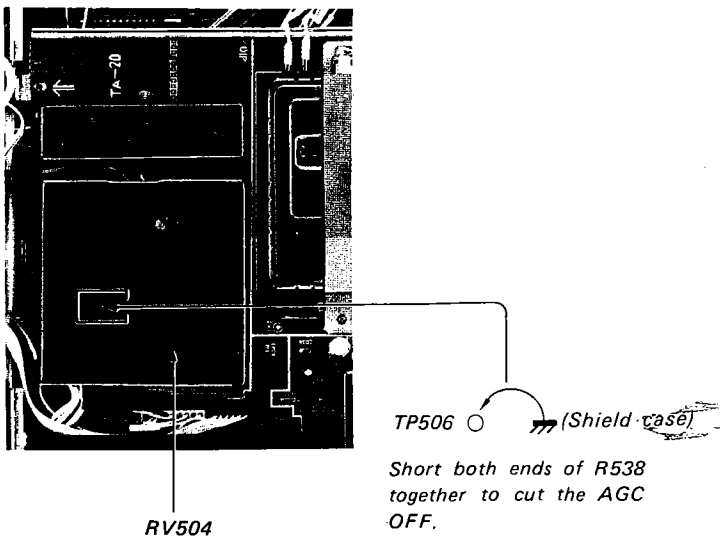
2) Playback



[Method of adjustment]

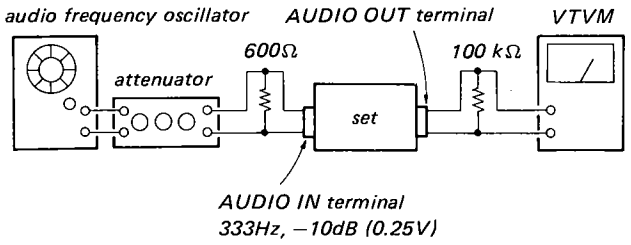
1) Short both ends of R538 (TP506 and Ground) together to cut the AGC OFF.
2) Input a 333 Hz signal, and adjust the attenuator so that the output level at the audio line output terminal in E-E mode becomes −5 dB (0.44V).
3) Record the 333 Hz signal.
4) Play the recorded section of tape back, and measure the level at the audio line output. It should be −5 dB (0.44V) ± 1 dB.
5) If the level measured in step 4) is outside of the correct ragne, repeat steps 2) through 4). If the output level is too high, turn RV504 clockwise. If the output level is too low, turn RV504 counterclockwise.

[Adjustment point: audio section (TA-20 board)]



7. Overall Level Check

[Connections]



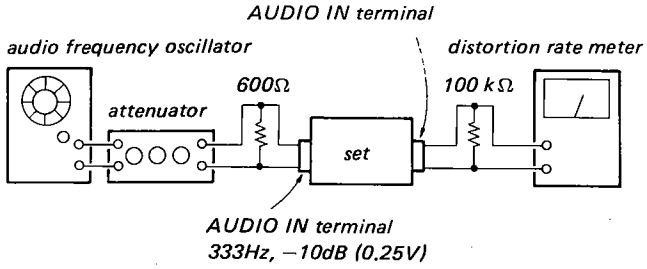
[Method of measurement]

1) Apply a 333 Hz, −10 dB (0.25V) signal to the audio input terminal and record it in βIII mode.
2) Play the recorded section of tape back and measure the output level at the audio line output.
3) Confirm that the output level is −5 dB (0.44V) $^{+2}_{-4}$ dB.

8. Overall Distortion Rate Check

[Connections]

1) Recording/playback



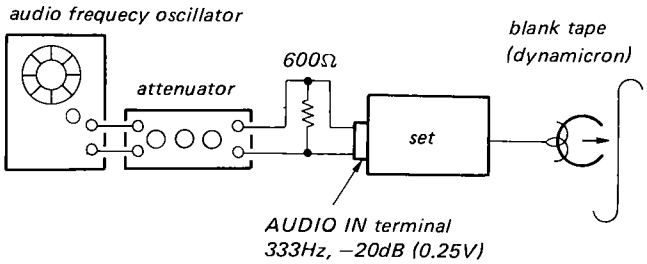
[Method of measurement]

1) Apply a 333 Hz, −10 dB (0.25V) signal to the audio input terminal and record it in βIII mode.
2) Play the recorded section of tape back and measure the distortion rate at the audio line output terminal.
3) Confirm that the distortion rate is 4% or less.

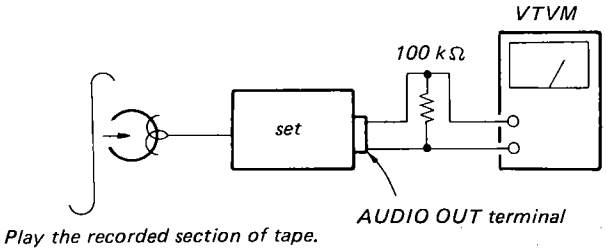
9. Overall Signal-to-noise Ratio Check

[Connections]

1) Recording (βIII mode)



2) Playback



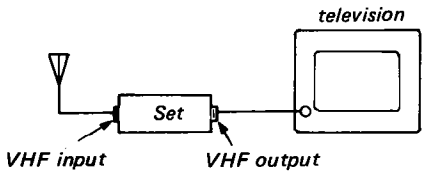
[Method of adjustment]

1) Apply a 333 Hz −10 dB (0.25V) signal to the audio input terminal and record it in βIII mode.
2) Next, connect a Pin Plug to the audio input terminal, leaving the input side of the Pin Plug open. That is to say, the recording is now done with no input signal.
3) Play the sections of tape recorded in steps 1) and 2) back and measure the respective output levels.
   Confirm that the difference between the signal level obtained from the section recorded in step 1) and the noise level obtained from the section recorded in step 2) is 33 dB or more.

5-6. TUNER BLOCK SYSTEM ADJUSTMENTS

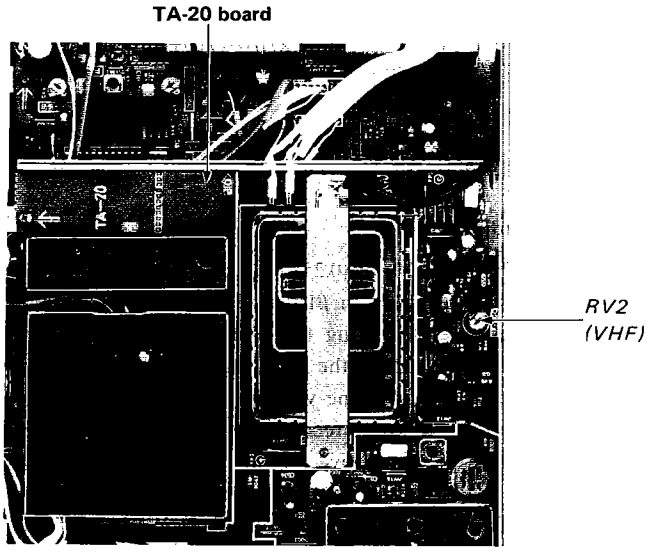
1. Tuner AGC Adjustment

[Method of adjustment]



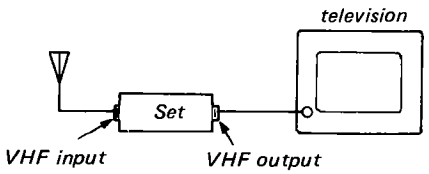
1) At maximum contrast, receive any VHF TV broadcast signal.
2) Turn RV2 clockwise until snow noise can be seen on the TV monitor screen.
3) Turn RV2 counterclockwise slowly and leave the adjustment at the point where the snow noise just disappears.
4) Receive telecast signals on all of the channels in succession and confirm that there is no beat due to cross-modulation, breakdown of the picture or snow noise.

[Adjustment point: audio section (TA-20 board)]



2. AFT Adjustment

[Method of adjustment]



1) Receive any TV broadcast signal.
2) Turn the AFT switch OFF (with the preset cover removed).
3) Turn the preset potentiometer until a 920 kHz beat can be seen, then turn it counterclockwise slowly and leave it set at the point where the 920 kHz beat just disappears.
4) Turn the AFT switch ON (press the AFT switch lever).
5) Connect an oscilloscope to TP3 and adjust T004 so that the DC level becomes 5.0V. Confirm that there is no disappearance of color or 920 kHz beat.
6) Next, turn the AFT switch back OFF (with the preset cover removed) and turn the preset potentiometer until the picture quality just starts to deteriorate. Leave it set at that point.
7) Turn the AFT switch ON and OFF repeatedly to check the AFT operation.
8) Return the preset potentiometer to the position where it was set in step 3).

[Adjustment point: audio section (TA-20 board)]

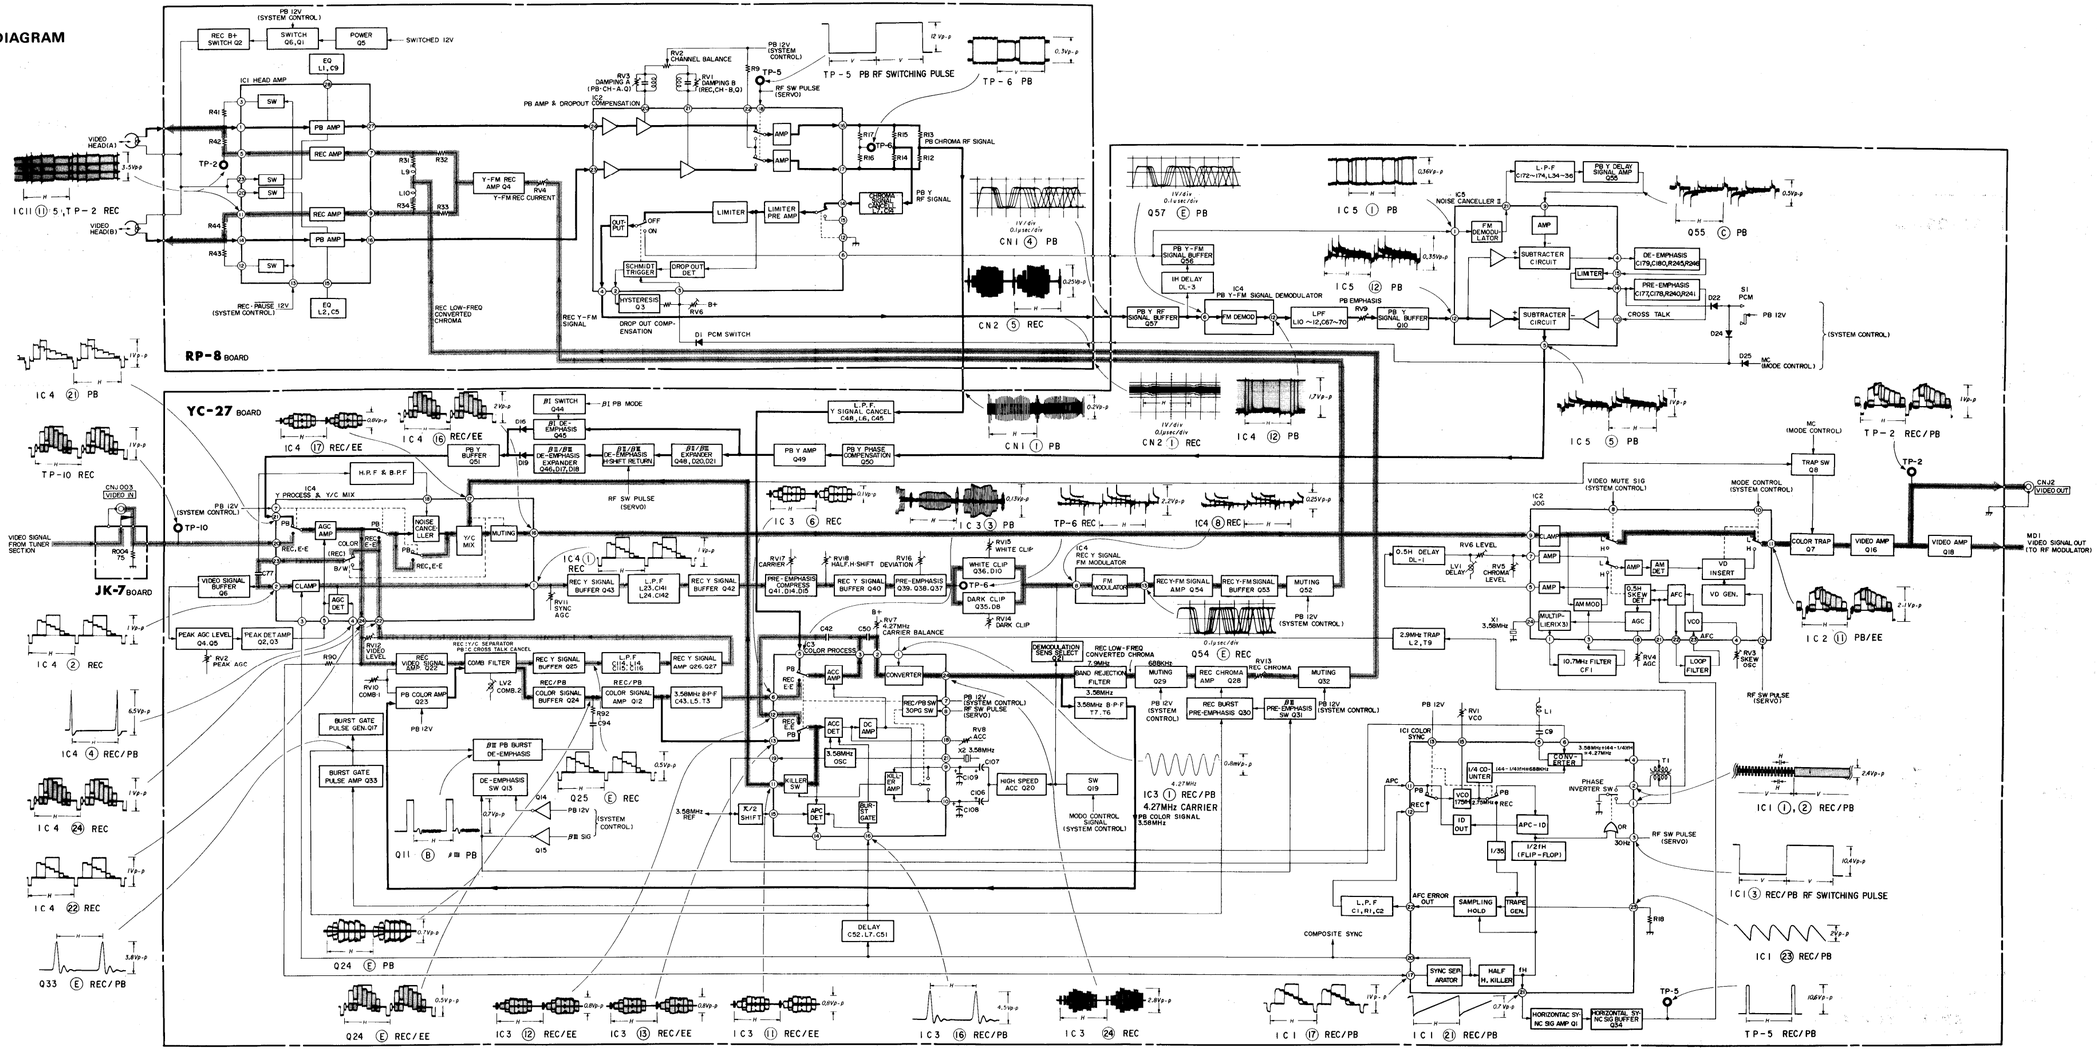
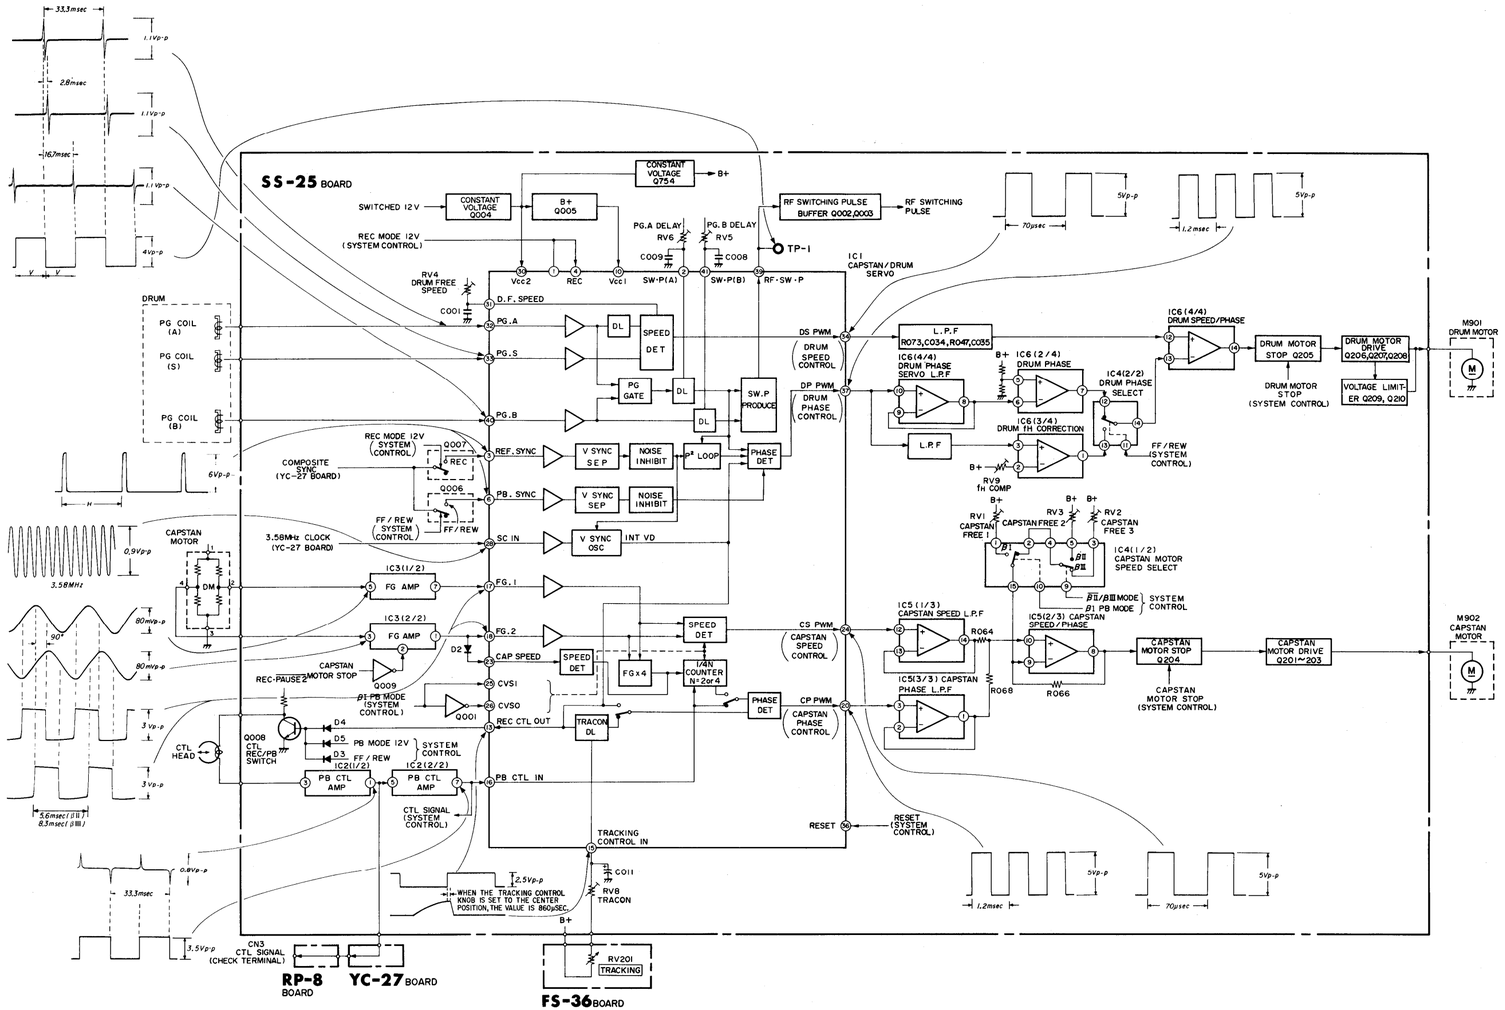
VIDEO BLOCK DIAGRAM



SERVO BLOCK DIAGRAM



IC 1 **Digital servo IC**

Terminal No.	I/O	Function and operation	Signal
1	Input	Changing-over signal in the REC mode	H: REC mode
2	Input	Time constant of RF switching pulse position	3.2Vp-p, PG(A), 32
3	Input	Composite signal input from the input video signal in the BETASCAN mode. In the BETASCAN mode (42-pin terminal "H") inside IC, the input controls the drum phase output to obtain the BETASCAN.	5Vp-p
4	Input	Input signal in the REC mode	H: REC mode
5	Input	Connected to GND.	
6	Input	Composite signal input from the PB video signal in the picture search mode. In the picture search mode (42-pin terminal "H") inside IC, the input controls the drum phase output to obtain the picture search.	5Vp-p
7	Input	Connected to B + power supply.	
8	Input	Connected to GND.	
9	Input	Connected to GND.	
10		Connected to B + power supply.	
11		Connected to GND.	
12	Output	Not used.	
13	Output	During REC, a composite signal from the input video signal is fed to a 3-pin terminal, and an REC CTL signal is generated and output using the vertical SYNC signal inside IC.	2.6Vp-p
14	Input	Connected to GND.	
15	Input	Tracking control time constant. During PB inside IC, the tracking control mono-multi output is a reference signal of the capstan phase servo.	2.6Vp-p
16	Input	PB CTL signal input in the PB mode. During PB, the input is a comparison signal of the capstan phase servo.	3Vp-p
17 18	Input Input	FG signal input from a capstan. During REC, the input is a comparison signal of the capstan phase servo. During REC and PB, the input is a capstan speed servo signal.	90°, 3.4Vp-p
19	Output	Not used.	
20	Output	Capstan phase servo output	PWM wave 5Vp-p
21	Output	Not used.	
22	Output	Not used.	
23	Output	Capstan speed detecting	Goes "H" when a capstan motor starts rotating.
